## General data

### Overview

3SE5 hinge switches have the same enclosures as the 3SE5 position switches (modular system).

Hinge switches

#### *Design*

Enclosure sizes

The 3SE5 switches are available as complete units in two enclosure sizes:

- Plastic enclosures according to EN 50047, 31 mm wide, IP65, 1 cable entry
- Metal enclosures according to EN 50047, 31 mm wide, IP66/IP67, 1 cable entry
- Plastic and metal enclosures according to EN 50041, 40 mm wide, IP66/IP67, 1 cable entry

Enclosure versions

Various basic versions can be selected for the enclosures:

- With two or three-pole switching elements designed as snap-action contacts
- AS-Interface version with integrated ASIsafe electronics for all enclosure designs (see page 13/100).

For a description of the basic switches, (see page 13/7).

Operating mechanism

The hinge switches are provided for mounting on hinges. The actuator head is included in the scope of supply. There are two versions:

- Operating mechanism with hollow shaft, inner diameter 8 mm, outer 12 mm
- Operating mechanism with solid shaft, diameter 10 mm

#### *3SE2283 hinge switches*

The 3SE2283 hinge switches with integrated hinge are available in a special design. They are particularly suitable for use in machine doors and flaps.

### Benefits

The 3SE5 hinge switches differ from the previous series through the following new characteristics:

- All actuators can be turned around the axis in increments of 22.5° (see picture, page 13/8).
- The new three-pole contact block 1 NO + 2 NC is available for all enclosure sizes (see picture, page 13/8).
- The plastic enclosure with a width of 31 mm has simple and fast wiring equipment which makes it possible to save approx. 20 to 25% of the time when connecting (see picture, page 13/8).
- The ASIsafe electronics are integrated in the enclosure for the versions with AS-Interface connection (see page 13/85); an additional adapter is not required.

### Application

The hinge switches are used in those areas where the position of swiveling protective devices such as doors or flaps must be monitored. With these switches, the position of the doors and flaps is converted into electric signals. The switches allow shutdown and signaling without delay in the event of a small opening angle through the snap-action contacts with an operating angle of 10°.

Devices are available with enclosure versions to suit the particular ambient conditions. Different control tasks can be performed with the contact blocks best suited for the particular purpose. Dimensions and fixing points of the enclosures are in accordance with EN 50041 or EN 50047 standards.

The devices are suitable for use in any climate.

#### *Standards*

IEC/EN 60947-5-1

The protective measure of "total insulation" by the plastic enclosure is ensured by the use of molded-plastic screw glands.

#### *Safety position switches*

For controls according to IEC/EN 60204-1, the devices can be used as a safety position switch. To secure position switches against changes in their position, keyed techniques must be employed on installation.

#### *Safety circuits*

The IEC/EN 60947-5-1 standard requires positive opening of the NC contacts. In other words, for the purposes of personal safety, the assured opening of NC contacts is expressly stipulated for the electrical equipment of machines in all safety circuits and marked in accordance with IEC 60947-5-1 with the symbol ⊖.

Category 4 according to EN ISO 13849-1 can be attained with the 3SE5 hinge switches with ⊖ if the corresponding fail-safe evaluation units are selected and correctly installed, e.g. the 3SK or 3TK28 safety relays or matching devices from the ASIsafe, SIMATIC or SINUMERIK product ranges.

# 3SE2, Plastic Enclosures

## With integrated hinge

### Overview

The 3SE2283 hinge switches with built-in hinge are particularly suitable for use in doors and flaps of machines that must be closed to ensure the safety of operating personnel. Their thin profile and the compact design allow them to be directly mounted on a hinged protective cover and the stable frame.

### Benefits

- Easy mounting through use of versions with integrated hinge
- Versions with small operating angle of 4° or 8°
- Protection against personal injury provided by positively driven NC contacts according to IEC 60947-5-1
- Simultaneous shutdown and signaling by 1 NO + 2 NC contacts

### Technical specifications

General data

## Overview

The 3SF1 position switches with safety-related communication can be directly connected using the AS-Interface bus system. The safety functions no longer have to be wired up conventionally.

With the 3SF1 position switches the ASIsafe electronics are integrated in the switch enclosure.

Examples of selection options in the modular system

### *Modular system*

The position switches of the 3SF11.4 and 3SF12.4 series are designed as a modular system comprising different versions of the basic switch and an actuator which must be ordered separately. Thanks to the modular design of the switch the end users can select the right solution for their application from numerous versions and install it themselves in a very short time.

### *Design*

The 3SF1 switches are available in four different enclosure sizes:

- Plastic and metal enclosures according to EN 50047, 31 mm wide, with M12 device plug
- Metal enclosures according to EN 50041, 40 mm wide, with M12 device plug
- Plastic enclosures, 50 mm wide, with M12 device plug and M12 socket
- Metal enclosures, 56 mm wide, with M12 device plug and M12 socket

### *Display*

The switches have a status display with three LEDs:

- LED 1 (yellow): F-IN1
- LED 2 (yellow): F-IN2
- LED 3 (green/red):AS-i/FAULT

### *Connection*

Connection to the AS-Interface is by means of a 4-pole M12 device plug (plastic version) connected to the yellow AS-Interface bus cable.

The wide enclosures (50 or 56 mm) also have an M12 socket for connecting a second position switch. Category 4 according to EN ISO 13849-1 is thus achieved.

## Benefits

The new generation of 3SF1 position switches offers:

- ASIsafe electronics integrated in the enclosure, with low power consumption < 60 mA
- An extensive range of actuators
- Status display with three LEDs
- Can be integrated easily via TIA Portal

## Application

With the standard position switches, mechanical positions of moving machine parts are converted into electrical signals. Through their modular and uniform design and large number of variants, the devices can comply with practically all requirements in industry.

Devices are available with enclosure versions to suit the particular ambient conditions. Different control tasks can be performed with the contact blocks best suited for the particular purpose. And many different actuator variants are available to match the mechanical configuration of the moving machine parts. Dimensions, fixing points and characteristics are largely in accordance with the EN 50041 or EN 50047 standards.

The devices are suitable for use in any climate.

### *Standards*

The switches comply with the standards IEC 60947-1 (Low-Voltage Controlgear, General) and IEC 60947-5-1 (Electromechanical Control Devices).

The mechanical design of the switch corresponds to the requirements of the fail-safe principle according to EN ISO 14119.

### *Approvals*

AS-Interface according to EN 50295 and IEC 62026-2.

With a 3SF1 position switch it is possible to achieve Category 2 according to EN ISO 13849-1 or SIL 1 according to IEC 61508.

Categories 3 or 4 according to EN ISO 13849-1 or SIL 2 or 3 according to IEC 61508 can be achieved by using a second 3SE5 position switch.

The 3SF1 position switches are approved according to UL 508, UL 50 and UL 746-C.

⊖ Positively driven actuator, for use in safety circuits.

1) Can be clinch mounted (turned through 180°, rear of lever).

## Overview

The 3SF1 safety switches with safety-related communication can be directly connected using the AS-Interface bus system. The safety functions no longer have to be wired up conventionally.

With the 3SF1 safety switches the ASIsafe electronics are integrated in the switch enclosure.

3SF1 safety switches with head for separate actuator and with integrated ASIsafe electronics

3SF1 safety switches with separate actuator have the same enclosures as the 3SF1 position switches.

### *Operation*

The actuator head is included in the scope of supply. For actuation from four directions it can be adjusted through 4 × 90°. The switches can also be approached from above.

The actuators are not included in the scope of supply of the safety switch and must be ordered separately from a choice of different versions to suit the application, (see page 13/96).

The actuator is encoded. Simple overruling by hand or auxiliary devices is impossible.

A high-grade steel blocking insert for attaching up to eight padlocks is available for even more safety.

A rubber cap to protect the actuator head from contamination is available for operation in dusty environments.

### *Display*

The switches have a status display with three LEDs:

- LED 1 (yellow): F-IN1
- LED 2 (yellow): F-IN2
- LED 3 (green/red): AS-i/FAULT

### *Connection*

Connection to the AS-Interface is by means of a 4-pole M12 device plug (plastic version) connected to the yellow AS-Interface bus cable.

The wide enclosures (50 or 56 mm) also have an M12 socket for connecting a second safety switch. Category 4 according to EN ISO 13849-1 is thus achieved.

## Benefits

The new generation of 3SF1 safety switches with separate actuator offers

- ASIsafe electronics integrated in the enclosure, with low power consumption < 60 mA
- An extensive range of actuators
- Status display with three LEDs

## Application

Safety switches with separate actuator are used where the position of doors, covers or protective grilles must be monitored for safety reasons.

The safety switch can only be operated with the matching coded actuator. Simple overruling by hand or auxiliary devices is impossible.

Devices are available with enclosure versions to suit the particular ambient conditions. Different control tasks can be performed with the contact blocks best suited for the particular purpose. Dimensions and fixing points of the enclosure are in accordance with EN 50041 or EN 50047 standards.

The devices are suitable for use in any climate.

### *Standards*

The switches comply with the standards IEC 60947-1 (Low-Voltage Controlgear, General) and IEC 60947-5-1 (Electromechanical Control Devices).

The mechanical design of the switch corresponds to the requirements of the fail-safe principle according to EN ISO 14119.

### *Approvals*

AS-Interface according to EN 50295 and IEC 62026-2.

With a 3SF1 safety switch it is possible to achieve Category 3 according to EN ISO 13849-1 or SIL 2 according to IEC 61508.

Category 4 according to EN ISO 13849-1 or SIL 3 according to IEC 61508 can be achieved by using an additional 3SE5 safety switch.

The 3SF1 safety switches are approved according to UL 508, UL 50 and UL 746-C.

# With Separate Actuator

## 3SF1, plastic enclosures, enclosure width 31 mm according to EN 50047 / 50 mm

### Overview

- Contacts: 1 or 2 slow-action contacts
- Status display with 3 LEDs 24 V DC;
  1: F–IN1, 2: F–IN2, 3: AS-i/FAULT
- Degree of protection IP65 (31 mm) or IP66/IP67 (50 mm)

[1] Not suitable for safety switches with tumbler.

## Overview

The 3SF1 safety switches with safety-related communication can be directly connected using the AS-Interface bus system. The safety functions no longer have to be wired up conventionally.

With the 3SF1 safety switches the ASIsafe electronics are integrated in the switch enclosure.

3SF1 safety switch with tumbler and with integrated ASIsafe electronics

### *Operation*

The actuator head is included in the scope of supply. For actuation from four directions it can be adjusted through 4 × 90°. The switches can also be approached from above.

The actuators are not included in the scope of supply of the safety switch and must be ordered separately from a choice of different versions to suit the application, (see page 13/96).

The actuator is encoded. Simple overruling by hand or auxiliary devices is impossible.

A high-grade steel blocking insert for attaching up to eight padlocks is available for even more safety.

A rubber cap to protect the actuator entry of the actuator head from contamination is available for operation of the enclosures in dusty environments.

### *Tumbler*

There are two versions for interlocking the actuator:

- Spring-actuated lock (closed-circuit principle) with various release mechanisms
- Solenoid-locked (open-circuit principle)

For more explanations, (see page 13/59).

### *Display*

The switches have a status display with four LEDs:

- LED 1 (green): AS-i
- LED 2 (red): FAULT
- LED 3 (yellow): F-IN1
- LED 4 (yellow): F-IN2

### *Connection*

Connection to the AS-Interface is by means of a 4-pole M12 device plug (plastic version) connected to the yellow AS-Interface bus cable (no additional supply of auxiliary power is required thanks to the low current consumption of the solenoid of max. 170 mA).

## Benefits

The new generation of 3SF13 safety switches with tumbler offers:

- More safety through higher locking forces:
  - 1 300 N for the plastic version
  - 2 600 N for the metal version
- Various release mechanisms: lock release, escape release and emergency release
- ASIsafe electronics integrated in the enclosure; connected through 4-pole M12 device plug
- Current consumption of the solenoid no more than 170 mA
- Two contact blocks as standard equipment, hence fewer versions needed
- Same dimensions for all enclosure versions: plastic, metal
- An extensive range of actuators
- Status display with four LEDs
- 3SF1324-1S.21-1BK4 series with high degree of protection IP69K, IP69 in accordance with IEC 60529, cover with foamed seal

## Application

The safety switches with tumbler are exceptional safety-related devices which prevent an unforeseen or intentional opening of protective doors, protective grilles or other covers as long as a dangerous situation is present (i.e. follow-on motion of the switched-off machine).

The safety switches with tumbler have the following functions:

- Enabling the machine or process with closed and locked protective device
- Locking the machine or process with opened protective device
- Position monitoring of the protective device and tumbler

### *Standards*

The switches comply with the standards IEC 60947-1 (Low-Voltage Controlgear, General) and IEC 60947-5-1 (Electromechanical Control Devices).

The mechanical design of the switch corresponds to the requirements of the fail-safe principle according to EN ISO 14119.

### *Approvals*

AS-Interface according to EN 50295 and IEC 62026-2

The switches are approved for use with locking devices according to EN ISO 14119 and EN 292, Parts 1 and 2.

3SF13 safety switches with tumbler have a VDE test mark.

With a 3SF13 safety switch with tumbler it is possible to achieve Category 3 according to EN ISO 13849-1 or SIL 2 according to IEC 61508.

Category 4 according to EN ISO 13849-1 or SIL 3 according to IEC 61508 can be achieved by using an additional 3SE5 safety switch.

The 3SF1 safety switches are approved according to UL 508, UL 50 and UL 746-C.

# With Tumbler

## 3SF1, plastic enclosures with locking force greater than 1 200 N

### Overview

***Versions***

- 1BA1: ASIsafe channel 1 on 1 NC contact from the actuator, and channel 2 on 1 NC contact from the solenoid
- 1BA3: ASIsafe channel 1 on the first NC contact from the actuator and channel 2 on the second NC contact from the actuator
- 1BA4: ASIsafe channel 1 on 2 NC contacts (two-channel) from the actuator, and channel 2 on 1 NC contact from the solenoid. The position switch transfers the information of actuators to a transfer channel because the discrepancy of the two actuator contacts is already evaluated in the switch.

The 3SF1324-1S.21-1BA4 safety switches are also recommended where there are several protective door tumblers and reliable diagnostics and quick restart capability of equipment is required.

- A response is received from the solenoid.
- No opening of the doors required after the solenoid is unlocked.

In connection with an ASIsafe MSS modular safety system or an ET 200SP F-CM AS-i Safety ST module, it is possible to achieve SIL 2 according to IEC 61508 or PL d according to ISO 13849-1. They comply with the standard EN ISO 14119. A TÜV certificate is available.

***Features:***

- Slow-action contacts
- 5 directions of approach
- Solenoid: Rated operational voltage 24 V DC
- 1 300 N locking force
- Degree of protection IP66/IP67 (IP69K)
- Status display with 4 LEDs 24 V DC; 1: AS-i, 2: FAULT, 3: F–IN1, 4: F–IN2

⊖ Positive opening according to IEC 60947-5-1, Appendix K.

[1] Supplied without actuator. Please order separately.

For actuators and optional accessories, see page 13/64.

# Safety Hinge Switches

## 3SF1, plastic enclosures, enclosure width 31 mm according to EN 50047 / 50 mm

### Overview

The 3SF1 safety hinge switches with safety-related communication can be directly connected using the AS-Interface bus system. The safety functions no longer have to be wired up conventionally.

With the 3SF1 hinge switches the ASIsafe electronics are integrated in the switch enclosure.

The hinge switches are provided for mounting on hinges. There are two actuator variants here:
- Hollow shaft, inner diameter 8 mm, outer 12 mm
- Solid shaft, diameter 10 mm

For the ASIsafe version of the hinge switch, the basic switch and actuator head must be ordered separately. The basic switches correspond to the 3SF1 position switches (use only versions with snap-action contacts).

The provisions and approvals are the same as for the 3SF1 standard switches, see page 13/85.

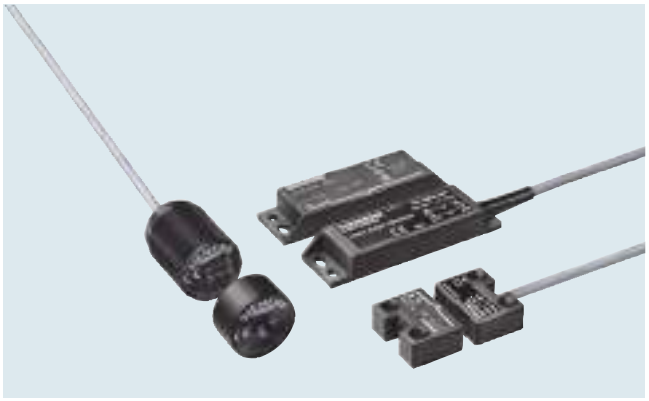
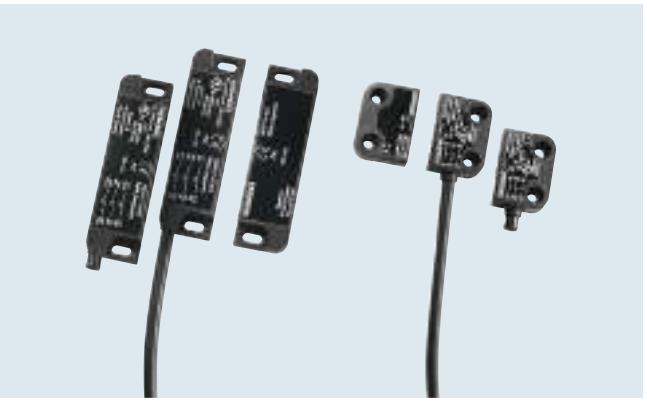
## Overview



3SE66 contact blocks and 3SE67 switching magnets

A magnetically operated switch comprises a coded switching magnet and a contact block (sensor unit). The switch must be connected to a safety relay, e.g. SIRIUS 3SK1, or a bus system, e.g. SIMATIC ET 200SP, for evaluation. The switches use reed contacts as mechanical contacts. The status of the contacts is monitored using an evaluation unit.



3SE66 contact blocks and 3SE67 switching magnets, supplementary range in new design

### *Safety relays*

3SK safety relays can be used worldwide since they possess all the required certification. Since they satisfy the most exacting safety requirements, they are suitable for all kinds of safety applications.

The following can be selected:

- 3SK1 Standard basic units:
  simple and compact to satisfy all the essential requirements of safety sensor monitoring systems
- 3SK1 Advanced basic units:
  multifunctional series with relay enabling circuits, semiconductor outputs or time-delay outputs
- 3SK2 basic units:
  multifunctional series whose functionality is parameterized using software. The basic units have solid-state outputs. Relay outputs from the 3SK1 portfolio can also be connected via device connectors.
- Expansion units for inputs and outputs

The 3SE6806 safety relay is also available with two floating enabling circuits (safe circuits) as NO contact circuits and one floating signaling circuit as an NC contact circuit.

## Benefits

### *Standard range*

- Non-contact round, rectangular, small (25 mm x 33 mm) and larger (25 mm x 88 mm) versions
- Small, compact, safe
- Simple mounting with alignment of sensor and actuator, and concealed installation also easy
- Suitable for restricted spaces

### *Supplementary range*

- New design for rectangular shape
- More functionality
- Greater switching intervals and a larger horizontal or vertical displacement
- Various mounting positions possible (e.g. at 90° offset)
- SIL 3 and PL e diagnostics possible because there are two safety contacts and one signaling contact
- LED variant
- Fast connection possible using plug-in variants

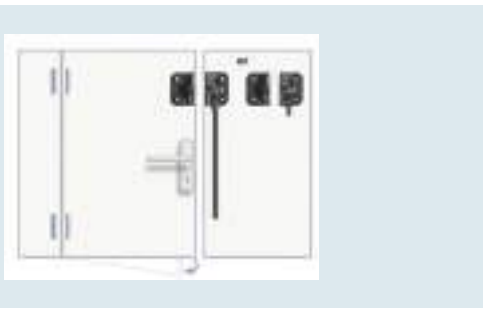
## Application

SIRIUS 3SE6 magnetically operated switches are designed for mounting on movable protective guards (hoods, hinged covers, doors, etc.). Evaluation can be performed by means of a safety relay or through connection to a bus system.

The 3SE66 non-contact, magnetically operated safety switches stand out due to their enclosed design with degree of protection IP67. Since they are coded, they do not have to be concealed when installed. They are particularly suitable therefore for areas exposed to contamination, cleaning or disinfecting.

A magnetic monitoring system comprises one or more magnetically operated switches and an evaluation unit, e.g. a safety relay. When contact blocks 1 NO + 1 NC (+ 1 NC signaling contact) or 2 NC (+ 1 NC signaling contact) are used, the 3SK safety relay, for example, provides a high degree of protection against manipulation and can be installed in safety circuits up to SIL 3 according to IEC 62061 and PL e according to EN ISO 13849-1.

Non-contact safety magnetically operated switches (with plug or cable) for right-hinged door



Non-contact safety magnetically operated switches (with plug or cable) for left-hinged door

## Overview

Non-contact RFID safety switches with maximum tamper resistance

RFID 3SE63 non-contact safety switches comply with the highest safety requirements, SIL 3 or Cat. 4, for monitoring the positions of movable protective devices.

An RFID safety switch consists of a coded RFID switch with an 8-pole M12 connection plug and an identical RFID actuator.

The switch is available in several versions:

- Family coded with M12 plug or with additional 18 N magnetic catch as an option
- Individually coded, programmable once, with M12 plug or with additional 18 N magnetic catch as an option
- Individually coded, programmable more than once (an unlimited number of times), with M12 plug or variant with additional 18 N magnetic catch

The actuator is therefore available in two versions:

- Standard
- With 18 N magnetic catch

The magnetic catch keeps doors and hinge switches closed with permanent magnets.

### *Mounting and maintenance*

Various options for mounting save on enclosure variants:

- Mounting of the switch on the right or left side
- The actuator can be mounted on all sides

Quick and easy mounting thanks to universal mounting holes:

- Standard gauge/holes for 3SE6 magnetically operated switches
- Fine adjustment thanks to slotted holes

Little adjustment or maintenance required:

- Threshold indication by LED display on the switch for quick and easy adjustment during mounting and maintenance
- Molded switch allows it to be used as an end stop for small and medium-sized doors

Note:

- Keep metal parts and cuttings away from the vicinity of the switch
- Minimum distance between two switches 100 mm

### *Optional accessories (mounting)*

- Covers for sealing mounting holes, also suitable for tamper-proofing screw fixings
- Spacers (approx. 3 mm high) to facilitate cleaning under the installation surface when using high-pressure cleaners, for example

### *Coding*

Family coded

These safety switches are delivered ready to use, i. e. no programming is necessary.

Individually coded, programmable once

The assignment of safety switch and actuator thus created is irreversible.

The actuator is programmed simply by routine during startup, thus permanently preventing any form of tampering by means of a replacement actuator.

Individually coded, programmable several times

The procedure for programming a new actuator can be repeated an unlimited number of times. When a new actuator is programmed the previous code becomes invalid. A protected coding process allows new actuators to be programmed for service purposes.

After this, a ten-minute lockout provides increased tamper protection. The green LED flashes until the lockout time has ended and the new actuator has been detected. If the operational voltage is interrupted during this time, the ten-minute guard time is restarted.

Programming procedure for individual coding

1. Apply operational voltage to safety sensor

2. Move actuator into detection range:
red LED lights up, yellow LED flashes (1 Hz)

3. After 10 s it changes to a shorter flashing frequency (3 Hz). In this state switch off operational voltage.

4. After the next time the operational voltage is switched on, the actuator is detected again to activate the programmed actuator code. The activated code is thus stored permanently.

### *Diagnostics*

The RFID safety switch indicates its operating state including faults by means of the LED indicator in the switch and the short-circuit proof diagnostics output. The signals can then be used for central displays or non-safety-related control tasks.

There are the following diagnostics functions:

- Crossover monitoring
- Open-circuit monitoring
- External voltage monitoring
- Ambient temperature too high
- Wrong or defective actuator
- Switching interval threshold identification with LED display

The signal combination "diagnostics output switched off" and "safety outputs still switched on" can be used to move the machine into a controlled stop position.

Any crossover or a fault that is not currently compromising the safe function of a safety switch results in the disconnection of the safety channels after a 30-minute delay. However, the diagnostics output switches off instantaneously.

Mode of operation of the diagnostics LEDs

The safety switch indicates not only its operating state, but also faults by means of LEDs in three colors at the ends of the RFID switch.

- The green LED indicates readiness for operation when the control supply voltage is connected.
- The yellow LED indicates that there is an actuator in detection range. If the actuator is in the switching interval threshold, this is indicated by flashing. This flashing can be used to identify a change in the distance between sensor and actuator at an early stage (e.g. as a result of the sagging of a protective door). The installation should be tested before the distance increases further, the safety outputs switch off and the machine stops.
- The red LED indicates the individual causes of the fault by means of defined flashing frequencies.

## Benefits

- Maximum tamper resistance by means of individual coding of switches and actuators at the highest safety level
- Plastic enclosure with integrated plug
- Two solid-state short-circuit proof safety outputs, each 250 mA
- Integrated crossover, open circuit and external voltage monitoring, with series circuit as far as the control cabinet
- Safety and diagnostics signals can be connected in series
- Series connection of safety circuits in Cat. 4/PL e/SIL 3
- LED status indication including switching interval threshold indication for quick and easy adjustment during installation and maintenance
- Short-circuit proof conventional diagnostics output
- Optional version with magnetic catch for interlocking hinge switches or small doors even when de-energized
- Highly rugged thanks to the use of tested enclosure materials, resistant to aggressive cleaning products, with a degree of protection of up to IP69K
  IP69 does not automatically mean that it can be used outdoors. The devices must be installed with corresponding protection for this purpose. UV radiation additionally affects the enclosure
- Fine adjustment thanks to slotted holes
- Little adjustment or maintenance required
- Molded switch allows it to be used as an end stop for small and medium-sized doors

## Application

RFID non-contact safety switches are designed for use in safety circuits, and are used to monitor the positions of movable protective devices. They monitor the positions of rotating, laterally sliding or removable protective devices using the coded electronic actuator.

Their high degree of protection (IP69K) and the use of cleaning-product-resistant materials means that these switches are optimized for use under extreme environmental conditions.

Their electronic operating principle makes these switches ideal for metalworking machinery.

The switches have a larger switching interval and switching displacement than mechanical switches, improve the mounting tolerance of the protective door, and offer a wide range of diagnostics options.

The RFID switches can be connected to all standard evaluation units suitable for solid-state inputs and in which the built-in crossover monitoring function can be deactivated, e.g.:

These safety categories can be achieved in safety circuits:

- Category 4 according to EN ISO 13849-1
- PL e according to EN ISO 13849-1
- SIL 3 according to IEC 61508

## Technical specifications

| Type | | 3SE63 |
|---|---|---|
| **General data** | | |
| **Standards** | | IEC 60947-5-3, IEC 61508, EN ISO 13849-1, EN ISO 14119 |
| **Enclosure material** | | Glass-fiber reinforced thermoplast, self-extinguishing |
| **Degree of protection** | | IP65/IP67/IP69K |
| **Ambient temperature** | | |
| • During operation | °C | -25 ... +70 |
| • During storage, transport | °C | -25 ... +85 |
| **Shock resistance** | | 30 *g* /11 ms |
| **Vibration resistance** | | 10 ... 55 Hz, amplitude 1 mm |

| Type | | 3SE63 |
|---|---|---|
| **Electrical specifications** | | |
| **Rated insulation voltage $U_i$** | V | 32 |
| **Degree of pollution** according to IEC 60664-1 | | 3 |
| **Rated impulse withstand voltage $U_{imp}$** | V | 800 |
| **Rated conditional short-circuit current** | A | 100 |
| **Rated operational voltage $U_e$** (PELV acc. to EN 60204-1) | V DC | 24 –15/+10% |
| **Protection class** | | II |
| **Overvoltage category** | | III |
| **Rated operational current $I_e$** | A | 0.6 |
| **Lowest operating current $I_m$** | mA | 0.5 |
| **No-load current $I_0$** | mA | 35 |

| Type | | 3SE63 |
|---|---|---|
| **Inputs/outputs** | | |

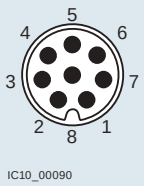
| **Safety outputs OSSD1/OSSD2** | | p operation |
| • Max. rated operating current $I_{e\ max}$ | A | 0.25 |
| • Rated operational current $I_e$/DC-12/DC-13 at $U_e$ | A | 0.25 |
| • Voltage drop $U_e$ | V | < 1 |
| • Switching frequency | Hz | 1 |
| • Response time, max. | ms | 100 |
| • Risk time, max. | ms | 200 |
| • Recovery, max. | s | 5 |
| **Diagnostics output** | | p operation |
| • Max. rated operating current $I_{e2\ max}$ | A | 0.05 |
| • Rated operational current $I_e$/DC-12/DC-13 at $U_e$ | A | 0.05 |
| • Voltage drop $U_e$ | V | < 2 |
| • Operational current | mA | 150 |
| • Conductor capacity, max. | nF | 50 |

### *Pin assignment*

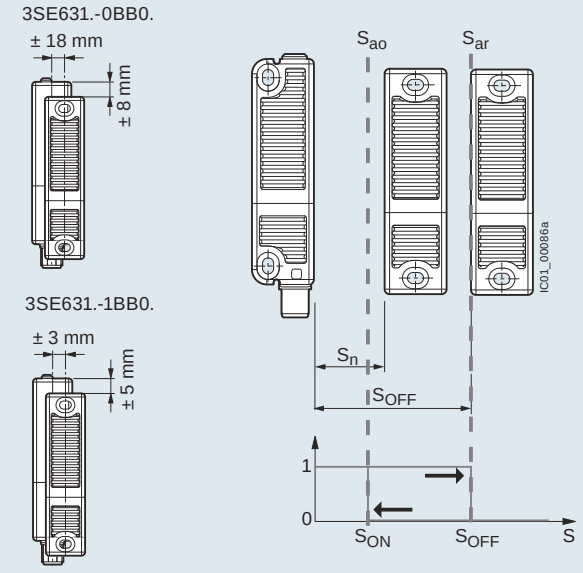


Pin 1: A1 rated operational voltage 24 V DC
Pin 2: X1 safety input 24 V DC
Pin 3: A2 grounding
Pin 4: OSSD1 safety output
Pin 5: OUT conventional diagnostics output
Pin 6: X2 safety input 24 V DC
Pin 7: OSSD2 safety output
Pin 8: Not used

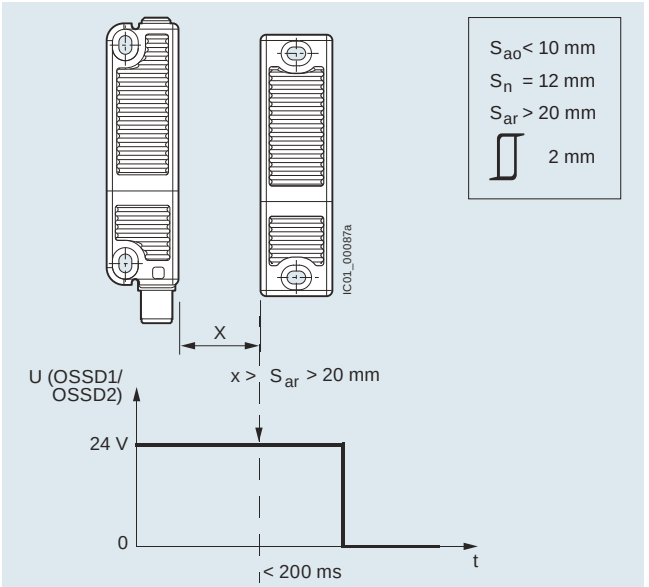
Pin assignment

### *Directions of approach and switching interval*

The side area permits a maximum height offset of the switch and actuator of ± 8 mm (e.g. mounting tolerance or due to sagging of the protective door). The transverse offset also equals max. ± 18 mm.



Switching interval: Output signal with hysteresis



Switching interval: Output signal with OFF delay

# 3SE03 Heavy Duty Limit Switches

## General Information

### Features

Modular plug-in

**Product Description**

These heavy duty switches define the industry standard with versatility of design and high reliability for low maintenance, installation and inventory costs. Standard Viton gaskets, seals and boots and a zinc die cast enclosure provide exceptional chemical resistance to the common coolants, cleansing agents, and hydraulic fluids found in machine tool, automotive, waste water treatment and other heavy duty industrial applications. Mounting dimensions accommodate both U.S. and DIN standards for easy retrofit installations.

**Features**

- Manufactured to take the physical and environmental abuse (including cutting fluids and chemicals) of harsh industrial environments
- Modular, plug-in components (head and switch body) provide application flexibility, reduced inventory and less downtime
- Chemical resistant Viton gaskets, seals and boots are standard, and so are captive, posi-drive screws
- A special internal seal on the switch body prevents fluid from entering even when the operating head is not attached
- 600V rating, ridge-topped contacts and wiping action assure continuity even to logic level circuits
- Factory wired cable features a 350 pound pullout capacity
- Keyed, four direction head positioning. Standard 5° pre-travel and 90° total travel
- Rotary heads are field convertible CW, CCW, or both, without special tools

**Standards and Certifications**

- UL Listed
- CSA certified
- CE (single pole only)
- RoHS Compliant

Factory Sealed

**Product Description**

These heavy duty switches were specifically designed to withstand the penetrating properties of cutting fluids and coolants, such as those used in the automotive industry, as well as extreme shock, vibration and temperature fluctuations. The one-piece, epoxy filled switch body is prewired at the factory to ensure leak-proof, submersible performance. This unique construction positively stops fluid from finding its way to any and all critical connections. Our 6P+ switches can be ordered in separate components or as complete assembled devices. They are available with prewired 16 AWG cables or mini-connectors. Standard and custom cable lengths are available, and these switches use the same operating heads as the standard 3SE03 switches.

**Features**

- Manufactured to take the physical and environmental abuse (including cutting fluids and chemicals) of harsh industrial environments
- Modular, plug-in components (head and switch body) provide application flexibility, reduced inventory and less downtime
- Chemical resistant Viton gaskets, seals and boots are standard, and so are captive, posi-drive screws
- A special internal seal on the switch body prevents fluid from entering even when the operating head is not attached
- 600V rating, ridge-topped contacts and wiping action assure continuity even to logic level circuits
- Factory wired cable features a 350 pound pullout capacity
- Keyed, four direction head positioning. Standard 5° pre-travel and 90° total travel
- Rotary heads are field convertible CW, CCW, or both, without special tools

**!! DANGER !!**

**THIS SENSOR IS NOT A SAFETY DEVICE AND IS NOT INTENDED TO BE USED AS A SAFETY DEVICE.**

3SE03 switches are designed only to detect and read certain data in an electronic manner and perform no use apart from that, specifically no safety-related use. This sensor product does not include self-checking redundant circuitry, and the failure of this sensor product could cause either an energized or de-energized output condition, which could result in death, serious bodily injury, or property damage.

For safety-rated limit switches, see page 13/7.

1) Temperature ranges below +32°F (0°C) are based on absence of freezing moisture or water.

2) For temperature rating of specific switch, refer to page 13/70, Operating Heads.

3) For CW only or CCW only operation, upper temperature limit increases to 250°F (121°C) without cable, and 221°F (105°C) with pre-wired cable.

4) Roller direction can be converted in the field.

① For use with **3SE03-DN1**, -DN2 operating heads and **3SE03-RB** receptacle only.
② For use with modular, Plug-in and NEMA Type 6P.
③
④ Refer to "Operating Temperature", Catalog page 13/118 for Temperature Ranges.
⑤ Without Operating Levers.
⑥ CW and CCW operation. Convertible to CW or CCW operation only.
⑦ Convertible—Horizontal to Vertical.
⑧ Requires Lever.
⑨ For use with **3SE03-SN** plug-in module only.

**All dimensions shown in inches and (millimeters). For reference purposes only. Not to be used for design or construction purposes.**

① Roller lever: Length from the operating shaft axis to the roller axis.
All other: Length from the operating shaft axis to the tip.

② Caution—When selecting lever, required return torque should not exceed minimum return torque in operating head.

③ Cap screw accommodates 3/64 inch Allen wrench.

④ By re-assembling lever minimum can be reduced another 0.50 (13).

⑤ Applies when lever extended to maximum dimension.

⑥ See dimensions page 13/76.

# 3SE03 Precision Limit Switches

## 3SE03 Metal enclosure

### Description

**Features**

- NEMA 1 Enclosed Aluminum Die Cast Housing
- Screw Terminals
- Booted versions for added protection
- 1/2" Conduit Entrance
- NEMA A600, R300 Contacts
- UL Recognized
- CSA Certified
- INO/INC Snap-action contacts (form c)

**Application**

These switches are designed for accurate repeatability. Their compact size makes them ideal for use in space-restricted areas.

Typical applications include overhead, folding and elevator doors, sliding gates and other automated equipment.

1) Inductive load has power factor of 0.04 minimum (AC) and a time of 7m/second (DC)

2) Lamp load has an inrush current of 6 times steady-state current.

## Overview

3SE7 cable-operated switches

**More information**

Industry Mall, see www.siemens.com/product?3SE7
For Manual, see
https://support.industry.siemens.com/cs/ww/en/view/107194954

The cable-operated switches are used for monitoring or as EMERGENCY STOP devices on particularly endangered system components.

As the effective range of a cable-operated switch is only limited by the length of the trip-wire, large systems can also be protected. Cable-operated switches (requiring pulling at both ends) and conveyor belt unbalance trackers are used primarily for monitoring very long belt systems.

### *Contact blocks*

The switches for wire lengths up to 50 m are supplied with 1 NO + 1 NC or 2 NC contacts and those up to 75 m with 1 NO + 3 NC contacts. The switches for wire lengths of 2 x 75 m and the conveyor belt unbalance tracker are supplied with 2 NO + 2 NC contacts.

The NC contacts of the cable-break or cable-pull signaling are positive opening. The NO contact can be used, for example, for signaling purposes.

### *Free position and display*

Cable-operated switches with one-side operation are held in free position by the pre-tension on the turnbuckle.

On switches with interlocking, with a pre-tensioned cable, the locking must be deactivated beforehand in order to return the cable-operated switch to its original position.

The cable-operated switch and the conveyor belt unbalance tracker can be supplied optionally with a factory-fitted LED (red, 24 V DC). This light in innovative chip-on-board technology allows the operating state of the switch to be visible at a distance of at least 50 m.

## Application

### *Standards*

The switches are equipped with latching mechanism and positive NC contacts and are thus suitable for operation in EMERGENCY STOP devices according to EN ISO 13850.

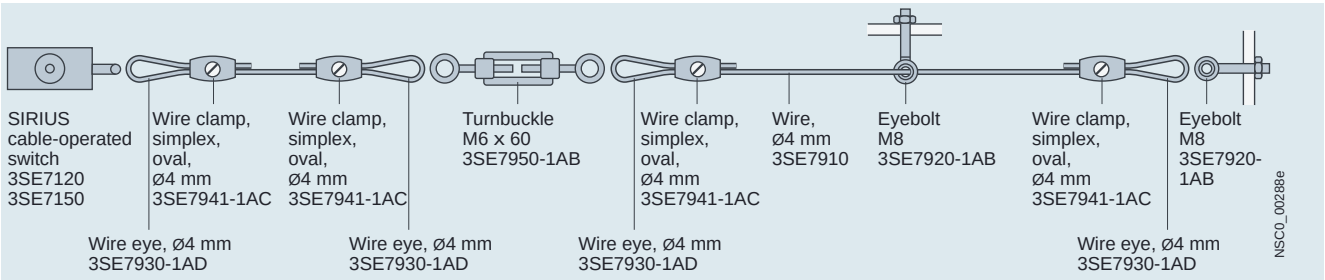
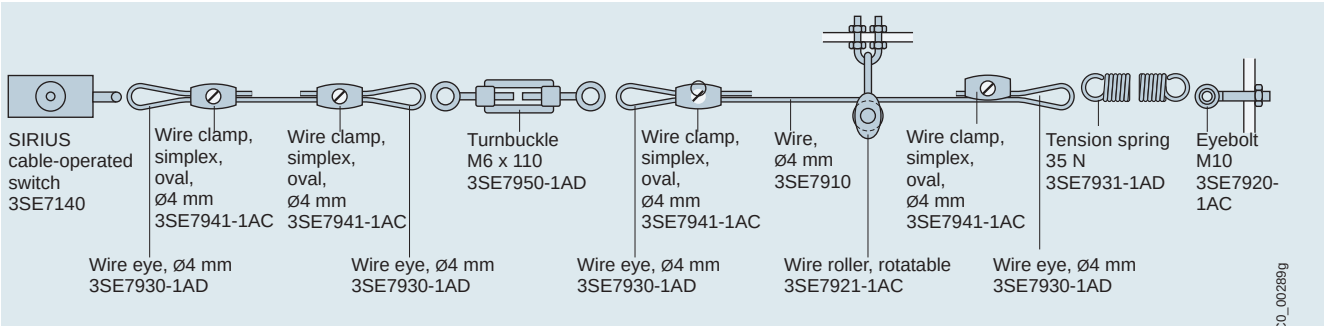
## Accessories

### *Configuration of the cable-operated switches*

**Short lengths of wire up to 25 m**

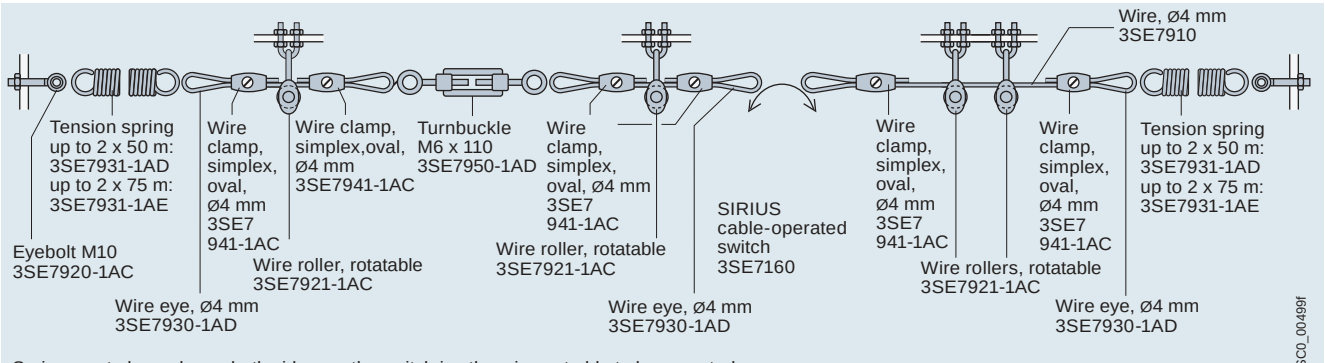


**Long lengths of wire up to 50 m**



Use of a tension spring is essential for lengths of wire ≥ 25 m.

**Pulling from both sides up to 2 x 100 m**



Spring must always be on both sides, as the switch is otherwise not able to be operated.

Note:

Large temperature fluctuations require corresponding compensation springs. For reliable connection the PVC sheath must be removed from the clamping area of the steel bowden wire. Bowden wire supports must be used at the recommended intervals.

## Two-hand operation consoles

### Overview

***Equipment***

The two-hand operation consoles are pre-equipped with commanding devices. In the case of plastic enclosures the command points are equipped as standard with actuators and indicators made of plastic and in the case of metal enclosures they are equipped with actuators and indicators made of metal.

The standard equipment comprises:

- 2 black mushroom pushbuttons, diameter 40 mm, 1 NO + 1 NC
- 1 red EMERGENCY STOP mushroom pushbutton according to ISO 13850, diameter 40 mm, with positive latching, 2 NC

The plastic version can be retrofitted with up to 8 customized command points. The surface of the console has premachined breaking points for this purpose.

### Application

The two-hand operation consoles are required for use with machines and systems that have hazardous areas, in order to direct both hands of the operator to one position.

The operation consoles are primarily used on presses, stamping machines, printing presses and paper converting machines, in the chemical industry and in the rubber and plastics industries.

The control command is given by pressing the two mushroom pushbuttons on the sides simultaneously (within 0.5 s of each other) and must be maintained for as long as a hazard exists.

For the further processing of control commands, evaluation units are used, e.g. 3SK11 safety relays or the 3RK3, 3SK2 Modular Safety System.

***Standards***

The two-hand operation consoles comply with the requirements of EN 574.

SIRIUS 3SK safety relays

**More information**

Homepage, see www.usa.siemens.com/safety-relays
Industry Mall, see www.siemens.com/product?3SK
Conversion tool, e.g. from 3TK28 to 3SK, see www.siemens.com/sirius/conversion-tool

SIRIUS 3SK safety relays are the key elements of a consistent, cost-effective safety chain. Whether you need EMERGENCY STOP functionality, protective door monitoring, light arrays, laser scanners or the protection of presses or punches – slimline SIRIUS safety relays enable all safety applications to be implemented in the best possible way in terms of engineering and price.

The following safety-related functions are available:

- Monitoring the safety functions of sensors
- Monitoring the sensor leads
- Monitoring the correct device function of the safety relay
- Monitoring the actuators in the shutdown circuit
- Safety-related disconnection when dangers arise

SIRIUS 3SK safety relays are approved for applications up to SIL 3 (IEC 61508/IEC 62061) or PL e (EN ISO 13849-1).

### *Device series*

SIRIUS 3SK safety relays stand out due to their flexibility for both parameterization and system designs with several evaluation units. This reduces device variance, thus bringing advantages in terms of device selection and spare parts management. Optimized solutions when selecting components and reduced spare part inventory requirements are facilitated by a clearly structured component range:

The following device series are available:

- 3SK1 Standard basic units
- 3SK1 Advanced basic units
- 3SK2 basic units
- 3SK1 output expansions
- 3SK1 input expansions
- Accessories

3SK1 Standard basic units

The 3SK1 Standard basic units are characterized by the following features:

- Compact design
- Simple operation
- Relay and semiconductor outputs
- Economical solution

3SK1 Advanced basic units

The 3SK1 Advanced basic units also offer:

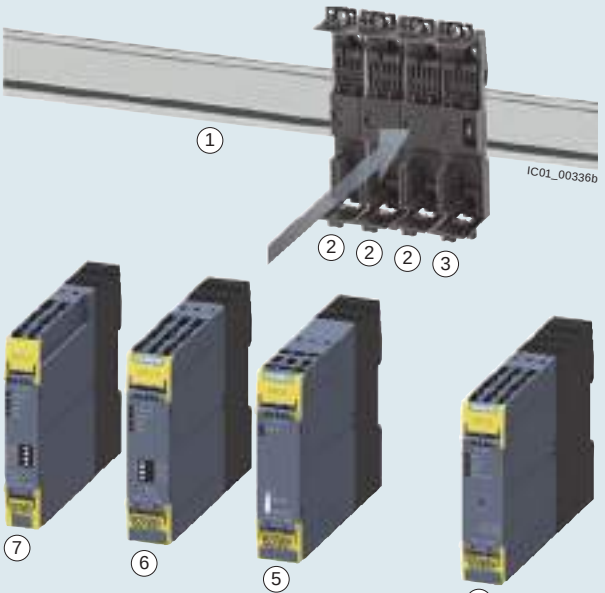
- Universal application possibilities thanks to multifunctionality
- Time-delayed outputs
- Expansion of inputs and outputs

3SK2 basic units

The 3SK2 basic units also offer:

- Up to six fail-safe, independent shutdown functions
- Flexible in use thanks to software parameterization
- Powerful semiconductor outputs
- Convenient diagnostics using diagnostics display and configuration software

In the case of 3SK1 Advanced basic units or 3SK2 basic units, the 3ZY12 device connector allows safety functions involving several sensors and actuators to be constructed very quickly.



1 Standard mounting rail
2 Device connector
3 Device termination connector
4 SIRIUS 3RM1 motor starter
5 SIRIUS 3SK1211 output expansion
6 SIRIUS 3SK1121 Advanced basic unit
7 SIRIUS 3SK1220 sensor expansion

System configuration example

## General data

The 3SK1 Standard and Advanced and 3SK2 series are a high-quality replacement for the 3TK28 safety relays. In their narrower design, and equipped with greater functionality, they can replace every 3TK28 device. The only exception to this are the 3TK2810 devices.

***Overview of functions of the 3SK series***

| Type | 3SK1 Standard basic units | | 3SK1 Advanced basic units | | 3SK2 basic units | |
|---|---|---|---|---|---|---|
| | | | | | 22.5 mm | 45 mm |
| | Safe relay outputs | Safe semiconductor outputs | Safe relay outputs | Safe semiconductor outputs | Safe semiconductor outputs | Safe semiconductor outputs |

✓ Available
-- Not available

1) 24 V basic units only.
2) 24 V AC/DC.
3) Possible using 3SK1230 power supply via device connector.
4) Up to four independent safe outputs, two of which via device connectors.
5) Up to six independent safe outputs, two of which via device connectors.
6) Possible using 3SK1230 power supply by means of wiring.

### *Parameter assignment*

3SK112 and 3SK1112 with DIP switch

The 3SK112 and 3SK1112 safety relays are configurable safety relays. They are used as evaluation units for typical safety chains (detect, evaluate, react). A number of functions can be set using the DIP switches on the front. 3SK112 and 3SK1112 are therefore universally applicable.

| DIP switch No. | OFF | ON | Schematic |
|---|---|---|---|
| 1 | Sensor input Autostart | Sensor input Monitored start |  |
| 2 | Without crossover monitoring | With crossover monitoring | |
| 3 | 2 x single-channel sensor connection | 1 x two-channel sensor connection | |
| 4 | With start test | Without start test | |

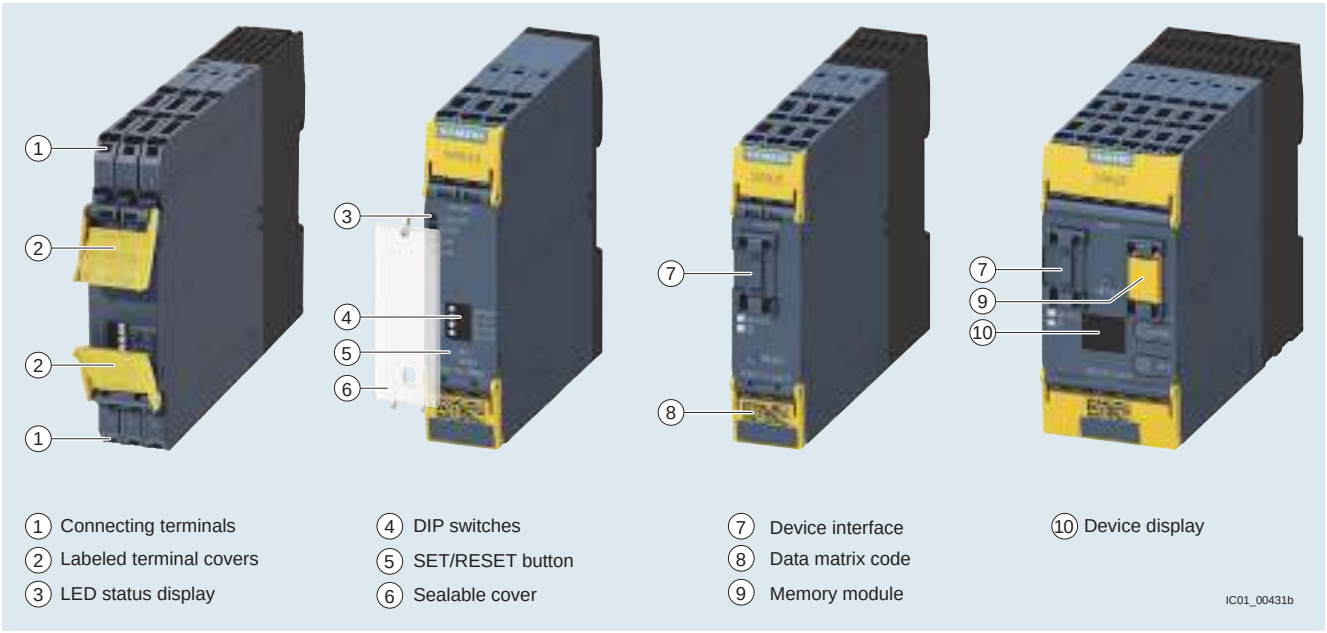
3SK2 with software

The 3SK2 safety relays are configured with the SIRIUS Safety ES software. The behavior of a 3SK2 device as well as the functioning of the individual safe outputs can thus be parameterized simply and conveniently in the logic diagram. In addition, the configuration can be printed out for documentation purposes. The software also supports users in commissioning and troubleshooting by means of online diagnostics and the option of "forcing" signals in the logic diagram. The 3SK2 safety relays thus offer maximum flexibility and universal application options.

Note:

SIRIUS Safety ES, see page 13/162.

### *Enclosure concept*



Innovative enclosure concept for SIRIUS 3SK safety relays

### *Connection methods*

The 3SK safety relays are available with screw or spring-type terminals (push-in).

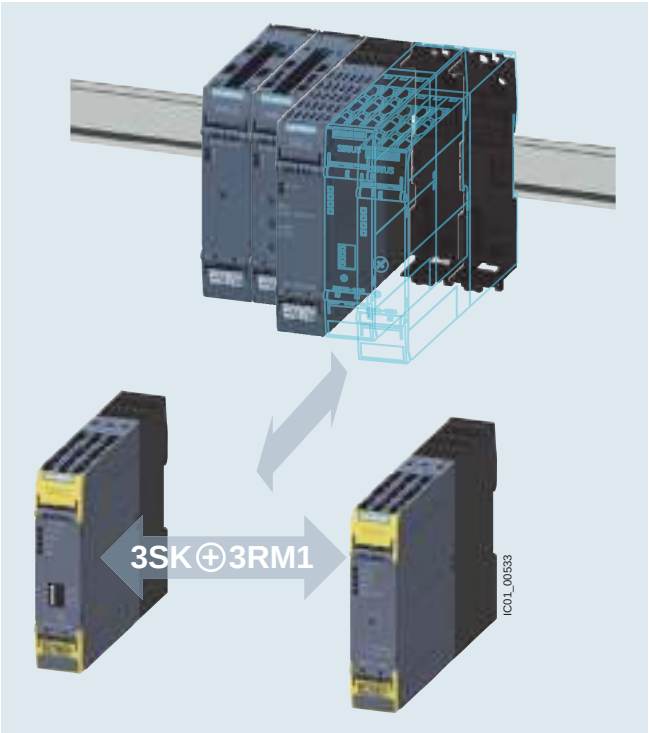
Spring-type terminals (push-in)

Push-in connections are a form of spring-type terminals allowing fast wiring without tools for rigid conductors or conductors equipped with end sleeves.

As with other spring-type terminals, a screwdriver (with 3.0 x 0.5 mm blade) is required to disconnect the conductor. The same tool can also be used to wire finely stranded or stranded conductors with no end finishing.

The advantages of the push-in terminals are found, as with all spring-type terminals, in speed of assembly and disassembly and vibration-proof connection. There is no need for the checking and tightening required with screw terminals.

***Seamlessly integrated safety right through to the main circuit***



Problem-free integration of functional safety into the main circuit through the simple combination of 3RM1 and 3SK1 devices

Functional safety in the main circuit needs to be both simple and flexible

The unique compatibility of hybrid 3RM1 fail-safe motor starters and 3SK safety relays means that integrated functional safety right through to the main circuit is no longer a problem.

Their compact design allows the motor starters to be installed to the right of the safety relay in a simple manner, just like an output expansion. The wiring of the safety-related signals to the relay can be performed simply, quickly and in an error-free manner using the device connector.

The ergonomically designed enclosure with removable terminals and terminal labeling in the hinged cover allows for the cables to be conveniently diagonally mounted from the front. Either screw or spring-type terminals with push-in technology are available.

Highlights

- Fail-safe disconnection of motors up to 3 kW
- Problem-free combination of fail-safe motor starters and safety relays
- End-to-end system, simple setup using device connectors
- Ergonomic enclosure

Note:

SIRIUS 3RM1 motor starters, see Section 6.

## Benefits

### *General*

- Approved for all safety applications because of its compliance with the highest safety requirements (SIL 3 and PL e)
- Universally usable thanks to adjustable parameters
- Usable worldwide thanks to globally valid certificates
- Compact SIRIUS design
- Device connectors with standard rail mounting for flexible connectability and expandability
- Removable terminals for greater plant availability
- Yellow terminal covers clearly identify the device as a safety component
- Sensor cable up to 2 000 m long allows it to be used in extensive plants

### *Relay outputs*

- Different voltages can be switched through the floating contacts
- The relay contacts allow currents of up to 5 A at AC-15/DC-13 to be connected

### *Semiconductor outputs*

- Wear-free
- Suitable for operation in frequently switching applications
- Insensitive to vibrations and dirt
- Good electrical endurance

### *Power outputs (3SK1213 output expansion)*

- Different voltages can be switched through the floating contacts
- With the power relay contacts currents up to 10 A AC-15/6 A DC-13 can be switched
- High mechanical and electrical endurance
- Protective separation between safe outputs and electronics

### *Expansion option by adding the 3RM1 motor starter*

SIRIUS 3SK safety relays are ideal for combining with the SIRIUS 3RM1 motor starters.

Combinations are made by means of

- SIRIUS 3ZY12 device connectors (in combination with 3SK1 Advanced/3SK2) or
- Conventional wiring (for all 3SK1 and 3SK2 basic units)

This makes collective shutdown very easy in assemblies. The wiring, and ultimately the shutting down of the control supply voltage for the expansion components in EMERGENCY STOP situations, is performed via the device connector. There is no further need for complex looping of the connecting cables between the safety relay and the motor starters.

The 3RM1 motor starter combines the benefits of semiconductor technology and relay technology. This combination is also known as hybrid technology.

The hybrid technology in the motor starter is characterized by the following features:

- The inrush current in the case of motorized loads is conducted briefly via the semiconductors. Advantages include protection of the relay contacts and a long service life due to low wear.
- The uninterrupted current is conducted via relay contacts. Advantages include lower heat losses compared with the semiconductor.
- Shutdown is implemented again via the semiconductor. The contacts are only slightly exposed to arcs, and this results in a longer service life.
- Integrated overload protection

Note:

SIRIUS 3RM1 motor starters, see Section 6.

### *3ZY12 device connectors*

Using 3ZY12 device connectors to combine devices reduces the time required to configure and wire the components. At the same time errors are avoided during wiring, and this considerably reduces the testing required for the fully-assembled application.

### *Configuration and stock keeping*

Variable setting options by means of DIP switches or software, a wide voltage range (3SK1111) and a special power supply unit (3SK1 only) reduce the cost of keeping stocks and the considerations involved in configuration where the evaluation units to be selected are concerned.

## Application

### *3SK1 safety relays*

SIRIUS 3SK1 safety relays are used mainly in autonomous safety applications which are not connected to a safety-related bus system. Their function here is to evaluate the sensors and the safety-related shutdown of hazards. Also they check and monitor the sensors, actuators and safety-related functions of the safety relay.

### *3SK2 safety relays*

SIRIUS 3SK2 safety relays are used primarily in autonomous, more complex safety applications for which the functional scope of the 3SK1 devices is no longer sufficient, such as in the implementation of independent shutdown functions or integration into higher-level control systems for diagnostics via fieldbus. Their function here is to evaluate the sensors and the safety-related shutdown of hazards. Also they check and monitor the sensors, actuators and safety-related functions of the safety relay.

## Overview

3SK111 Standard basic units

The 3SK111 Standard basic units are characterized by simple, variable functionality. These devices are recommended for safety functions requiring only a few sensors and a small number of outputs on the safety relay.

Note:

Use of device connectors not possible.

## Overview

3SK112 Advanced basic units

The 3SK112 Advanced basic units form an innovative system landscape that allows even complex safety functions with large numbers of sensors and outputs to be built up using the device connectors. It is possible to increase both the number of inputs for sensors and the number of safe outputs of the basic unit without the need for wiring outlay between the devices.

Note:

Use of device connectors possible.

## Overview

3SK2 basic units

Starter Kit

The 3SK2 basic units have a large number of inputs and outputs within a narrow width. In addition, demanding safety applications can be implemented simply with several independent safety functions. Flexible application options are enabled by powerful semiconductor outputs, as well as by expandability with additional 3SK output expansions and 3RM1 Failsafe motor starters. Flexible time functions and diagnostics options are available. The 22.5-mm-wide version of the 3SK2 basic units has 10 x single-channel (5 x two-channel) inputs, while the 45-mm-wide 3SK2 version comes with 20 x single-channel (10 x two-channel) inputs.

***Starter Kit***

The Starter Kit is a favorably-priced complete package for the simple creation of complex safety applications and comprises:

- 3SK2112-2AA10 basic unit, 22.5 mm wide, with spring-type terminals (push-in)
- SIRIUS Safety ES Standard software for configuring, commissioning, operating and diagnosing
- USB PC cable for easy transmission of the configuration to the device by means of USB

## Overview

3SK121 output expansion

The 3SK121 output expansions can be used to expand all 3SK basic units.

***3SK1211 output expansion***

The 3SK1211 output expansion is used to expand the safe outputs of a basic unit by adding another four safe outputs. These outputs have a switching capacity of AC-15 5 A at a switching voltage of 230 V. The devices can be connected to any 3SK basic unit by means of wiring. In addition, the devices with a 24 V DC control supply voltage can also be connected to 3SK1 Advanced basic units and 3SK2 basic units by means of the 3ZY12 device connectors.

***3SK1213 output expansion***

The 3SK1213 output expansion is used to expand the safe outputs of a basic unit by adding three safe outputs with high switching capacity. These outputs have a switching capacity of AC-15 10 A at a switching voltage of 230 V. The devices can be connected to any 3SK basic unit by means of wiring. As with the 3SK1211, the devices with a 24 V DC control supply voltage can also be connected to 3SK1 Advanced and 3SK2 basic units by means of the 3ZY12 device connectors.

Note:

It is only possible to expand the Standard basic units by means of wiring. Advanced basic units and 3SK2 basic units can be expanded using the 3ZY12 device connector.

## Benefits

- Perfect adaptation of the number of outputs
- Simple expansion of instantaneous and time-delayed safe outputs of the Advanced basic units using device connectors
- When using the device connector the outputs on the terminals of the basic device can still be used
- Another two freely configurable shutdown functions on 3SK2 basic units when using device connectors
- Expansion with power contacts for high AC-15/DC-13 currents in the control circuit
- No wiring of the feedback circuit to the basic units is required when using device connectors
- Shorter installation times
- Less configuring and testing required

## Overview

3SK1220 sensor expansion

With the input expansions

- 3SK1220 sensor expansion
- 3SK1230 power supply

the 3SK1 Advanced basic units can be made more flexible.

***3SK1220 sensor expansion***

The 3SK1220 input expansion allows additional sensors to be integrated easily and flexibly. The device monitors two single-channel sensors or one two-channel sensor, whatever their output technology (floating/single-ended).

Note:

The 3SK1220 sensor expansion can only be connected to the 3SK1 Advanced basic units by means of the 3ZY12 device connector, see page 13/145.

***3SK1230 power supply***

The 3SK1230 power supply makes the 3SK1 devices universally usable, whatever control supply voltage is to be used.

Note:

Alongside the 3ZY12 device connector, the 3SK1230 power supply can also be wired to act as a power supply for 3SK1 devices.

## Benefits

- A wide voltage range of 110 ... 240 V AC/DC allows the devices to be used worldwide
- Low stock keeping due to little variance
- Flexible expansion of the number of sensors without the need for additional wiring between the devices
- Perfect adaptation of the number of inputs to suit the application
- Universal use thanks to the wide range of adjustable parameters for sensor expansion (parameters as for 3SK1 Advanced basic units)

## Overview

Numerous accessories are available for 3SK, such as device connectors, terminals, cables, adapters, covers, memory and diagnostics modules or software.

### *Device connectors for 3SK112., 3SK12.. and 3SK2*

The device connector can be used to connect devices of the 3SK/3RM1 system together, with the last device in a system configuration being placed on a device termination connector. Use of device connectors not possible with 3SK1 standard.

Device connectors are available in various versions specifically for the 3SK safety relays:

| For type | Device connectors | | | | Device termination connectors | |
|---|---|---|---|---|---|---|
| | **3ZY1212-1BA00** (for 3SK1, width 17.5 mm) | **3ZY1212-2BA00** (for 3SK1, width 22.5 mm) | **3ZY1212-2GA00** (for 3SK2, width 22.5 mm) | **3ZY1212-4GA01** (for 3SK2, width 45 mm) | **3ZY1212-2DA00** (for 3SK1, width 22.5 mm) | **3ZY1212-0FA01** (for 3SK1, set for enclosures ≥ 45 mm) |
| **3SK1 Advanced basic units** | | | | | | |

## Overview

SIRIUS 3TK2810 safety relays

**More information**

Homepage, see www.usa.siemens.com/safety-relays
Industry Mall, see https://mall.industry.siemens.com/mall/en/us/Catalog/Products/8260001

### *3TK2810-0 standstill monitors*

The standstill monitor increases safety in hazardous areas. Without a sensor, it detects motor stoppage from the residual magnetization of the rotating motor. When an adjustable threshold value is undershot, it uses its outputs to allow access to hazardous areas, for example by unlocking a protective door.

### *3TK2810-1 speed monitors*

The speed monitor combines two safety functions in one unit by continuously monitoring machines and plants for standstill and speed.

Through simple parameterization and permanent diagnosis on the display, faults can be quickly remedied at any time – often before they cause plant downtimes.

In addition to standstill and speed monitoring, the unit also features an integrated monitoring function of a protective door with spring-type interlocking. Therefore, an additional evaluation unit is not needed.

Note:

The Article No. scheme shows an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

## Benefits

### *3TK2810-0 standstill monitors*

- No additional sensors required
- Signaling of faults with diagnostics display
- Standstill time can be set
- Unit can be used with frequency converters

### *3TK2810-1 speed monitors*

- Menu-prompted, easy parameterization
- Direct diagnosis on the display means shorter downtimes thanks to early fault detection
- Integrated protective door monitoring means greater safety because access to the plant is allowed only in the safe state
- Suitable for all standard sensors, i.e. high flexibility

## Overview

SIRIUS 3RK3 Modular Safety System

**More information**

Industry Mall, see
https://mall.industry.siemens.com/mall/en/us/Catalog/Products/10041776

The 3RK3 Modular Safety System (MSS) is a freely configurable modular safety relay. Depending on the external circuit version, safety-related applications up to performance level e according to EN ISO 13849-1 or SIL 3 according to IEC 62061 can be realized.

The modular safety relay enables the interconnection of several safety applications.

The comprehensive error and status diagnostics provides the possibility of finding errors in the system and localizing signals from sensors. Plant downtimes can be reduced as the result.

The MSS comprises the following system components:

- Central units
- Expansion modules
- Interface modules
- Diagnostics modules
- Parameterization software
- Accessories

### *Central units*

MSS Basic

The 3RK3 Basic central unit is used wherever several safety functions need to be evaluated and the wiring parameterization of safety relays would involve significant cost and effort. It reads in inputs, controls outputs and communicates through an interface module with higher-level control systems. An application's entire safety program is processed in the central unit. The 3RK3 Basic central unit is the lowest expansion level and fully functional on its own, without the optional expansion modules.

MSS Advanced

The 3RK3 Advanced central unit is the logical expansion of the Basic central unit with the functionality of an AS-i safety monitor. In addition to having a larger volume of project data and scope of functionality it can be integrated in AS-Interface and therefore make use of the many different possibilities offered by this bus system. The function can be optionally activated in the central unit.

The service-proven insulation piercing method of AS-Interface enables not only the distributed expansion of the project data volume using safe AS-i outputs, safe AS-i sensors and other MSS Advanced or safety monitors (F cross traffic) but also a highly flexible adaptation of the application, e.g. very fast connection of AS-i outputs, EMERGENCY STOP command devices, position switches with and without tumbler, or light curtains.

Safety-related disconnection using MSS or by distributed means using safe AS-i outputs and the formation of switch-off groups can be realized very easily. The same applies for any subsequent modifications. They are now possible by simply readdressing, meaning that rewiring is no longer necessary.

The AS-i bus is connected directly to the central unit.

MSS ASIsafe

The MSS ASIsafe basic and MSS ASIsafe extended central units are a logical development of the AS-i safety monitors based on the 3RK3 Modular Safety System.

Like MSS Advanced, MSS ASIsafe detects – in a comparable way to the safety monitors – safe sensor technology on the AS-i bus and switches actuators off in a safety-related manner via a configurable safety logic. It stands out by virtue of its greater project data volume, wider range of functions and the possibility of increasing the integrated I/O project data volume by means of expansion modules from the MSS system family. In this case the range of functions, such as the number and type of the logic elements that can be interconnected, is equivalent to that of MSS Advanced.

### *Expansion modules*

With the optional expansion modules, both safety-related and standard, the system is flexibly adapted to the required safety applications.

### *Interface modules*

The DP interface module is used for transferring diagnostics data and device status data to a higher-level PROFIBUS network, e.g. for purposes of visualization using HMI. When using the Basic central unit, 32-bit cyclic data can be exchanged with the control system. If an Advanced/ASIsafe central unit is used, the number is doubled to 64-bit cycle data. In acyclic mode, both central units can call up diagnostic data.

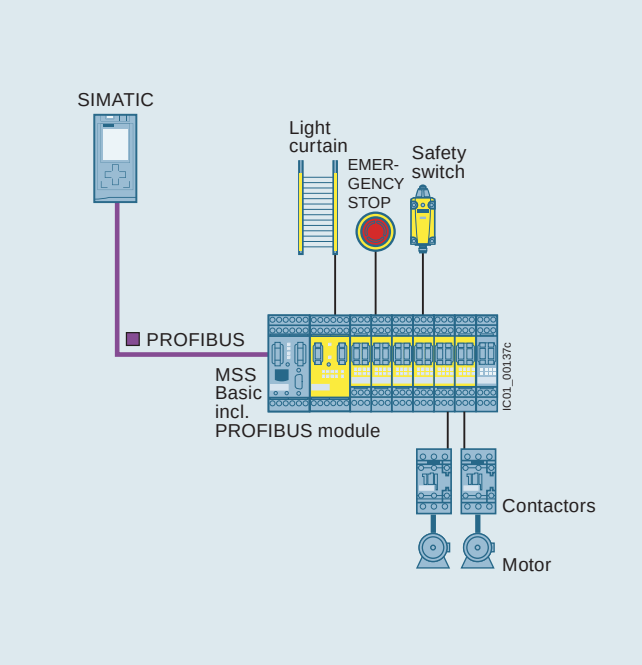
### *Diagnostics modules*

Actuated sensors or faults, e.g. cross-circuit, are indicated directly on the diagnostics display. The fault is diagnosed directly in plain text by the detailed alarm message. The device is fully functional upon delivery. No programming is required.

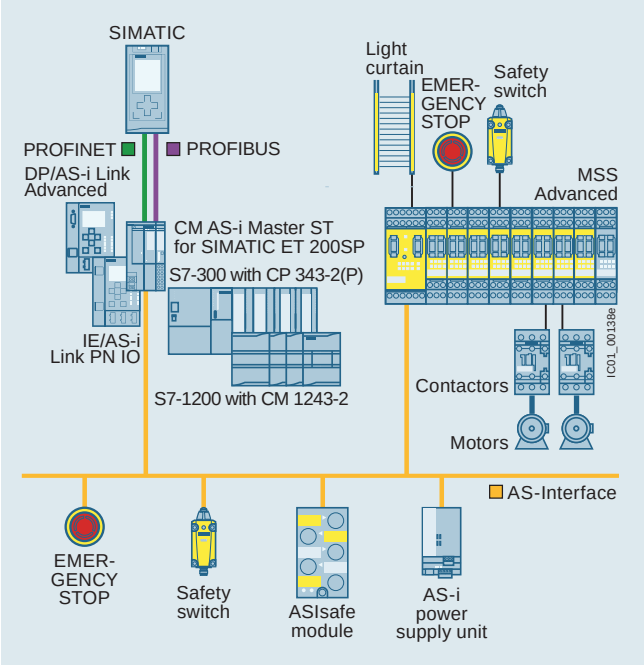
### *Parameterization software*

Using the SIRIUS Safety ES graphical parameterization tool, it is very easy to create the safety functions as well as their logical links on the PC. You can define disconnection ranges, ON-delays, OFF-delays and other dependencies for example.

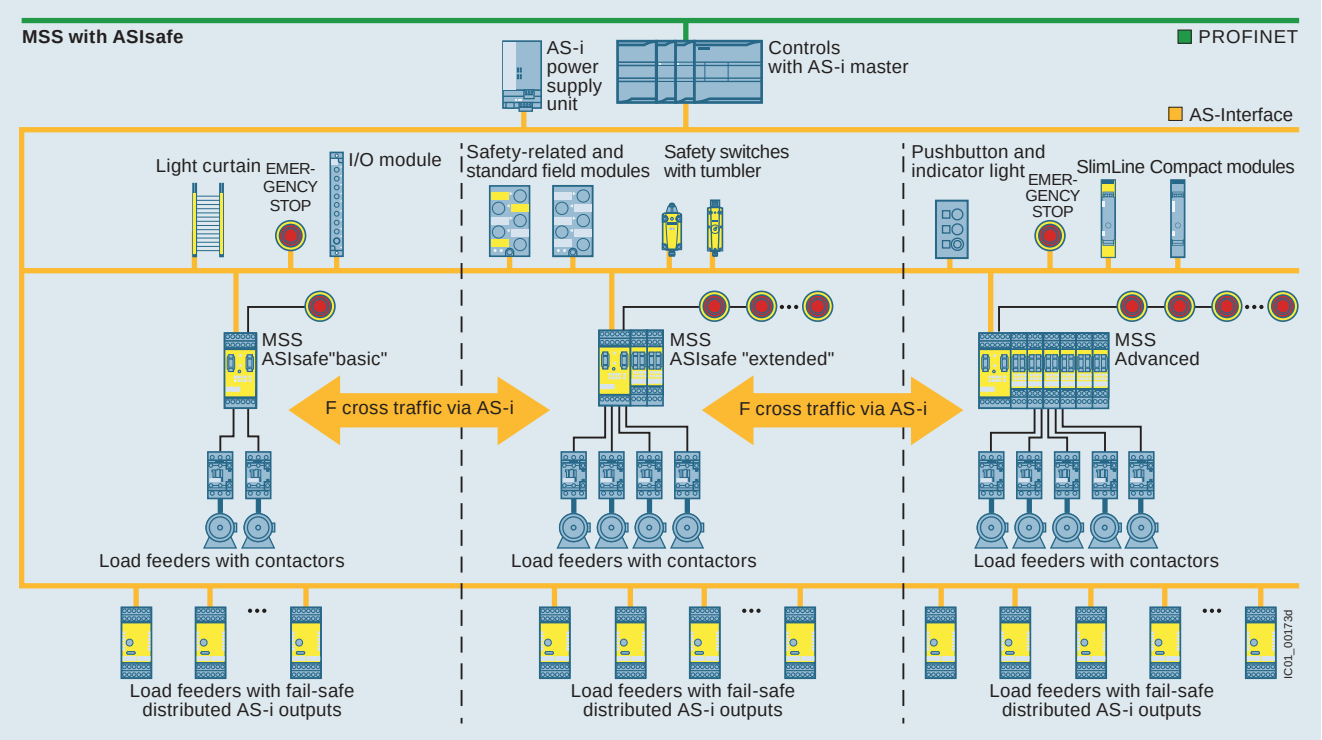
SIRIUS Safety ES also offers comprehensive functions for diagnostics and commissioning. Documentation of the MSS hardware configuration and the parameterized logic is created automatically.



System design of MSS with Basic central unit



System design of MSS with Advanced central unit



System design of MSS as a combination of various central units with AS-Interface

***Article No. scheme***

| Product versions | | Article number |
|---|---|---|
| **Basic units** | | **3RK3 1 □ □ – □ A □ □ 0** |

| Connection type | Screw terminals | **1** |
| | Spring-type terminals | **2** |
| Example | | **3RK3 5 1 1 – 1 B A 1 0** |

Note:

The Article No. schemes show an overview of product versions for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the selection and ordering data.

## Benefits

- More functionality and flexibility through freely configurable safety logic
- Suitable for all safety applications thanks to compliance with the highest safety standards in production automation
- For use all over the world through compliance with all product-relevant, globally established certifications
- Modular hardware configuration
- Parameterization by means of software instead of wiring
- Removable terminals for greater plant availability
- Distributed detection of sensors and disconnection of actuators through AS-Interface
- All logic functions can also be used for AS-Interface, e.g. muting, protective door with tumbler
- Up to 12 independent safe switch-off groups on the AS-i bus
- Volume of project data can be greatly increased by means of AS-Interface
- Up to 50 two-channel enabling circuits per system

### *Communication via PROFIBUS*

The 3RK3 Modular Safety System can be connected to PROFIBUS through the DP interface and exchange data with higher-level control systems.

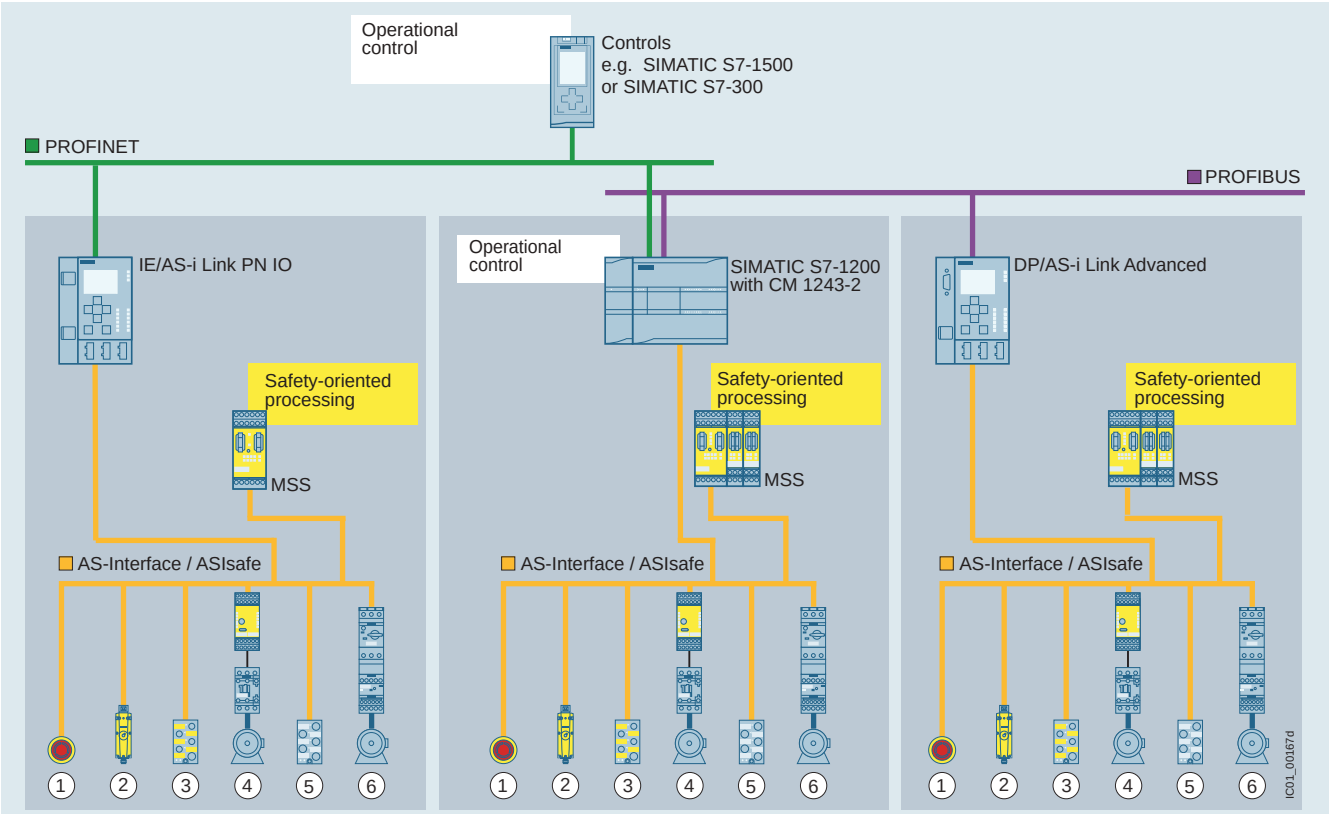
The MSS supports among other things:

- Baud rates up to 12 Mbps
- Automatic baud rate detection
- Cyclic services (DPV0) and acyclic services (DPV1)
- Exchange of 32-bit cyclic data with MSS Basic or 64-bit cyclic data with MSS Advanced/MSS ASIsafe
- Diagnostics using data record invocations

### *AS-Interface communication*

Using the Advanced and ASIsafe "basic" and "extended" central units, the 3RK3 Modular Safety System can be integrated in AS-Interface.

- MSS can read and evaluate the I/O data of up to 31 AS-i modules
- Up to 12 safe output signals per MSS can be placed on the AS-i bus for switching safe AS-i output modules or for fail-safe cross traffic between multiple MSS stations
- Safe cross traffic between multiple MSS stations or between one MSS and AS-i safety monitors
- Standard signals, e.g. for acknowledgment, can also be output on the AS-i bus



1 Safe EMERGENCY STOP
2 Safe position switch with tumbler
3 Field module
4 Load feeder with safe AS-i outputs
5 Digital K45 field module
6 3RA2 load feeder

Integration of the MSS into AS-Interface

Notes:

MSS with communication function, see page 13/159 onwards.
Accessories, see page 13/161 onwards.
SIRIUS Safety ES, see page 13/162.

## Application

The 3RK3 Modular Safety System can be used for all safety-related requirements in the manufacturing industry and offers the following safety functions:

| | Symbol | MSS Basic | MSS Advanced, MSS ASIsafe |
|---|---|---|---|
| ***Monitoring functions*** | | | |
| **Universal monitoring**<br>Evaluation of any binary signals from single-channel and two-channel sensors | | -- | ✓ |
| **EMERGENCY STOP**<br>Evaluation of EMERGENCY STOP devices with positive-opening contacts | | ✓ | ✓ |
| **Safety shutdown mat**<br>Evaluation of switching mats with NC contacts and/or crossover detection | | ✓ | ✓ |
| **Protective door monitoring**<br>Evaluation of protective door signals and/or protective flap signals | | ✓ | ✓ |
| **Protective door tumbler mechanism**<br>Evaluation of protective doors with tumbler and of the actuation/release of this tumbler | | -- | ✓ |
| **Approval switches**<br>Evaluation of OK buttons with NO contact | | ✓ | ✓ |
| **Two-hand operator controls**<br>Evaluation of two-hand operator controls | | ✓ | ✓ |
| **ESPE monitoring**<br>Evaluation of non-contact protective devices, e.g. light curtains and laser scanners | | ✓ | ✓ |
| **Muting**<br>Temporary bridging of non-contact protective devices, 2/4 sensors in parallel, 4 sensors in sequence | | -- | ✓ |
| **Mode selector switches**<br>Evaluation of operating mode selector switches with NO contacts | | ✓ | ✓ |

## Overview

**More information**

Technical specifications, see https://support.industry.siemens.com/cs/ww/en/ps/21192/td

Programming and Operating Manual, see https://support.industry.siemens.com/cs/ww/en/view/109444445.

SIRIUS Safety ES is the engineering software for the configuration, startup and diagnostics of the 3RK3 Modular Safety System and 3SK2 safety relays. The software combines the configuring of the hardware, the parameterization of the safety functions, and the testing and diagnostics of the safety system.

### *Efficient engineering with three program versions*

The SIRIUS Safety ES software program is available in three versions which differ in their user-friendliness, scope of functions and price.

| SIRIUS Safety ES | Basic | Standard | Premium |
|---|---|---|---|
| Access via the local interface on the device | ✓ | ✓ | ✓ |
| Parameter assignment | ✓ | ✓ | ✓ |
| Operating | ✓ | ✓ | ✓ |
| Diagnostics | ✓ | ✓ | ✓ |
| Test | -- | ✓ | ✓ |
| Integrated graphics editor | ✓ | ✓ | ✓ |
| Importing/exporting parameters | -- | ✓ | ✓ |
| Comparison functions | -- | ✓ | ✓ |
| Comfort functions | -- | ✓ | ✓ |
| Terminal designator | -- | ✓ | ✓ |
| Work on sub-diagrams | -- | ✓ | ✓ |
| Standard-compliant printout according to EN ISO 7200 | ✓ | ✓ | ✓ |
| Downloading parameterization via PROFIBUS | -- | -- | ✓ |
| Online diagnostics using PROFIBUS | -- | -- | ✓ |
| Creating, importing and exporting macros | -- | -- | ✓ |

✓ Function available

-- Function not available

### *Additional functions*

Language selection

The program interface language can be switched during use between German, English and French

Help function

A context-sensitive help function provides useful assistance with questions concerning the use of the program

Consistency check

A consistency check provides clear information about function assignment errors and users are taken directly to errors when the corresponding message is clicked on. Checks are carried out automatically when a project is saved and during the configuration test, but they can also be initiated manually.

Lists

Lists of symbols and cross-references can be issued for effective processing of the project file

Standard-compliant printouts

The programs of the SIRIUS ES software family make machine documentation far easier. They enable parameterization printouts according to EN ISO 7200. The elements to be printed are easy to select and group as required.

### *Hardware configuration*

The device configuration of the 3RK3 or 3SK2 systems is defined in the configuration dialog. The available modules are simply selected from the clearly laid out hardware catalog and positioned in the workspace. Depending on the device system used (3RK3 or 3SK2), only the permitted devices are shown in the hardware catalog in each case. In addition, in the case of the 3RK3, the quantity framework on the AS-i bus can be determined online or configured manually from the AS-i library. For each module, it is optionally possible to issue an equipment ID which is shown in the logic diagram for identification of the inputs and outputs.

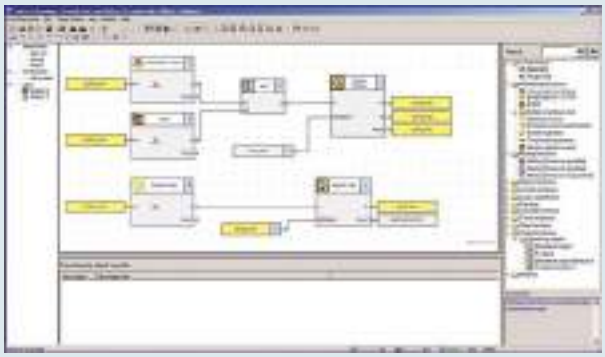
Definition of the hardware layout

### *Graphic parameterizing of the safety logic via drag & drop*

The functionality of the safety logic is laid down with a graphics editor designed for intuitive operation. Safe monitoring functions (EMERGENCY STOP, non-contact protective devices/light arrays, protective doors, etc.), output functions and logic functions (AND/OR operations, counting function, time functions, etc.), non-safety-related input/output functions, device status functions and control functions can be dragged from the extensive functions catalog onto the work interface by drag & drop. Depending on the version, each function has several input and output connecting points through which the functions can be interconnected by simple mouse clicks. Double-clicking on a function symbol opens the related features dialog window in which all the parameters can be displayed and configured: Scope of the function's inputs and outputs, configuring the channel type (single-/two-channel, NC contact/NO contact), activating crossover detection, defining start options, assigning the hardware inputs and outputs, etc. Of course each function can be issued with an individual name so that e.g. the position of a safety switch in the plant can be documented.

The safety logic can be divided into several diagrams in order to enable structured processing of the entire plant. The user can freely position the functions on a quasi infinitely large drawing board, whereby the connecting lines are drawn automatically. If there is not enough space, more pages are automatically added to the diagram in horizontal or vertical direction. Connecting lines extending over several pages are automatically issued with cross-references during print-out. If required in the interest of clarity, the user can divide a connecting line manually into two segments, whereby the mutual reference is marked by reference arrows. For further documentation, freely compilable comment texts can be placed at any point in the diagram. Every point in the logic diagram can be processed with ease by dragging and zooming.

Every project can be saved as a file and be password-protected from unauthorized access.



Processing the safety functions in the graphics editor

***AS-Interface***

Evaluation of the AS-i slaves connected to the AS-i bus is also parameterized using the tried and tested method described above.

In order to be able to use the AS-i functionalities, a 3RK3 Advanced central unit or 3RK3 ASIsafe central unit (basic/extended) must be used.

***User prompting during startup and maintenance***

To start up the relevant safety system, the created project file is uploaded to the device. There are two ways of doing this:

- Connect the USB interface of the PC to the device using an appropriate connection cable.
- Use the DP interface to download the parameterization via any PROFIBUS node.

Access to the device can be restricted using a password concept that includes different protection levels.

After the project is loaded, the user switches the device by means of the software from configuring mode to test mode in which the safety functions can be tested.

Activating the diagnostics shows the status of the individual functions in the graphic logic diagram by means of different colors and symbols. In addition, more detailed information about each function element can be displayed in the logic diagram. For the purpose of testing the logic diagram, it is also possible to manually overwrite the signal state of each function element ("forcing").

If the test is completed successfully, the user releases the configuration and switches the device to protection mode, in which case "forcing" is automatically deactivated.

Service personnel can activate the graphic diagnostics in protection mode as well. The I&M (Identification & Maintenance) data saved in the device facilitate maintenance.

## Benefits

- Convenient parameterization, operation, monitoring and testing by means of a user-friendly and clear-cut user interface
- Reliable diagnostic tool
- All functions, such as safety and logic functions, are available as modules, and are easy to link to one another
- Automatic creation of comprehensive documentation of safety functions

AS-Interface

| AS-i = simple! | AS-i = flexible! | AS-i = efficient! |
|---|---|---|
| • Only one cable for data and energy | • Flexible topologies | • User-friendly addressing |
| • Time-saving assembly/installation | • Open standard | • Fast device replacement |
| • Engineering in the TIA Portal | • Expandability | • Ruggedness and stability |
| • User-friendly maintenance | • Safety engineering | • Device and network diagnostics |

IC01_00210

***AS-Interface – the smart communication standard for universal connection of the field level to the control system***

The AS-Interface (AS-i) – the Actuator-Sensor-Interface, to be more precise – is a smart bus system for the field level that connects all the sensors and actuators in the field to the higher-level control system more simply, flexibly and efficiently than any other.

The structure of a complex automation system is not always clear at first glance. The field level in particular, with its large numbers of devices with real-time requirements, needs a clear structure.

That is exactly what the AS-i fieldbus delivers: Via a simple two-wire cable – the yellow AS-i cable – in an AS-i network up to 62 bus nodes can be connected to the AS-i master and simultaneously supplied with power. The standard here is robust data transmission in a rugged environment with a high degree of protection for the AS-Interface.

AS-i from Siemens has everything in its favor

- Complete AS-i product range for bus-based standard and safety technology from a single source
- System-wide integration of the AS-i devices into SIMATIC, SINUMERIK and the TIA Portal engineering framework
- Integration of ASIsafe applications into SIMATIC F controller safety programming
- Central configuration of standard and safety technology in the TIA Portal and in STEP7 Classic – just one engineering framework for controller, AS-i master and safety
- Quick diagnostics of master and slave components via web browser, HMI or TIA Portal
- Planning, calculation and verification of the whole safety chain based on AS-i Safety in the Safety Evaluation Tool (TÜV-approved)
- Integration of lower-level AS-i networks into the PCS 7 process control system
- Global spare parts logistics, consulting and service

## Masters

The AS-Interface master connects SIMATIC control systems to AS-Interface. It automatically organizes the data traffic on the AS-Interface cable and handles not only signal processing, but also parameter setting, monitoring and diagnostics functions.

CM 1243-2 for SIMATIC S7-1200

CP 343-2, CP 343-2P for SIMATIC S7-300

### Masters for SIMATIC S7

AS-Interface master connections:

| | Article No. | Page |
|---|---|---|
| • CM 1243-2 for SIMATIC S7-1200 | 3RK7 | From 14/28 |
| • CP 343-2P, CP 343-2 for SIMATIC S7-300 and ET 200M | 6GK7 | From 14/30 |

Features:

- Connection of up to 62 AS-Interface slaves
- Connection of up to 496 inputs and 496 outputs per master or AS-Interface network
- Integrated analog value transmission
- Simple configuration by adopting the actual configuration on the AS-Interface network
- Easy operation in the input/output address area of the SIMATIC S7 comparable to standard I/O modules
- Monitoring of the control supply voltage on the AS-Interface shaped cable

Your advantage: Easy connection to SIMATIC controllers.

CM AS-i Master ST for SIMATIC ET 200SP

### Masters for SIMATIC ET 200

| | Article No. | Page |
|---|---|---|
| CM AS-i Master ST for SIMATIC ET 200SP | 3RK7 | From 14/32 |

- Connection of up to 62 AS-Interface slaves per master
- Connection of up to 496 inputs and 496 outputs per AS-Interface network
- Integrated analog value transmission
- Simple configuration by adopting the ACTUAL configuration on the AS-Interface network
- Easy operation in the input/output address range of the SIMATIC (or other controller) comparable to standard I/O modules
- Monitoring of the control supply voltage on the AS-Interface shaped cable
- Integrated ground-fault monitoring

Your advantage: Easy connection of AS-i networks to distributed I/Os.

F-CM AS-i Safety ST for SIMATIC ET 200SP

| | Article No. | Page |
|---|---|---|
| F-CM AS-i Safety ST for SIMATIC ET 200SP | 3RK7 | From 14/36 |

- Monitoring of up to
  - 31 fail-safe AS-i input slaves per F-CM
  - 16 fail-safe AS-i outputs per F-CM
- Transmission via PROFIsafe into the F-CPU for safety-related applications up to SIL 3 (IEC 61508/EN 62061)/PL e (EN ISO 13849-1)
- As a result, these sensors become part of the "unlimited programming and data archiving" options of SIMATIC and of Safety Integrated.

Your advantage: Easy connection of fail-safe AS-i networks to the distributed I/Os.

Engineering and visualization

***IO-Link – more than just another interface***

IO-Link is an open communication standard for sensors and actuators – defined by the IO-Link Consortium.

IO-Link is a smart concept for the uniform connection of actuators and sensors to the control level by means of a low-cost point-to-point connection.

As an open interface, IO-Link can be integrated into all standard fieldbus and automation systems.

The IO-Link communication standard below fieldbus level enables central error diagnostics and localization down to actuator/sensor level, and facilitates both startup and maintenance by allowing parameter data to be dynamically changed directly from the application.

The increasing intelligence of field devices and their integration into automation as a whole now allows data to be accessed right down to the lowest field level. The result: greater plant availability and less engineering work.

Transparency in the process through IO-Link

High system availability and data transparency are market requirements that must also be met by the connecting of innovative control technology to a control system. A systematic diagnostics concept and efficient handling of parameter data are required for this purpose in automation.

With the aid of the IO-Link communication standard, a communication link is established between switchgear and controller, and this allows data to be exchanged efficiently. Based on a standard cable, it is therefore possible to integrate parameter, process and diagnostic data and measured values into the plant automation with ease. For example, the available diagnostic data allow potential errors to be detected quickly, thus avoiding lengthy plant downtimes.

As a consequence of their basic function, such as overload protection (SIRIUS 3RB24 electronic overload relays for IO-Link), many controls have measured values. The availability of these via IO-Link now allows conclusions to be drawn at an early stage concerning wear and tear in the application.

At the same time the option of parameterizing via IO-Link supports the device not just when parameters concerning operating time are changed, but also when the device is replaced. In the case of a spare part, for example, the parameters can be quickly transmitted to a new device via the communication system.

# AS-Interface Introduction

## Communication overview

### Overview

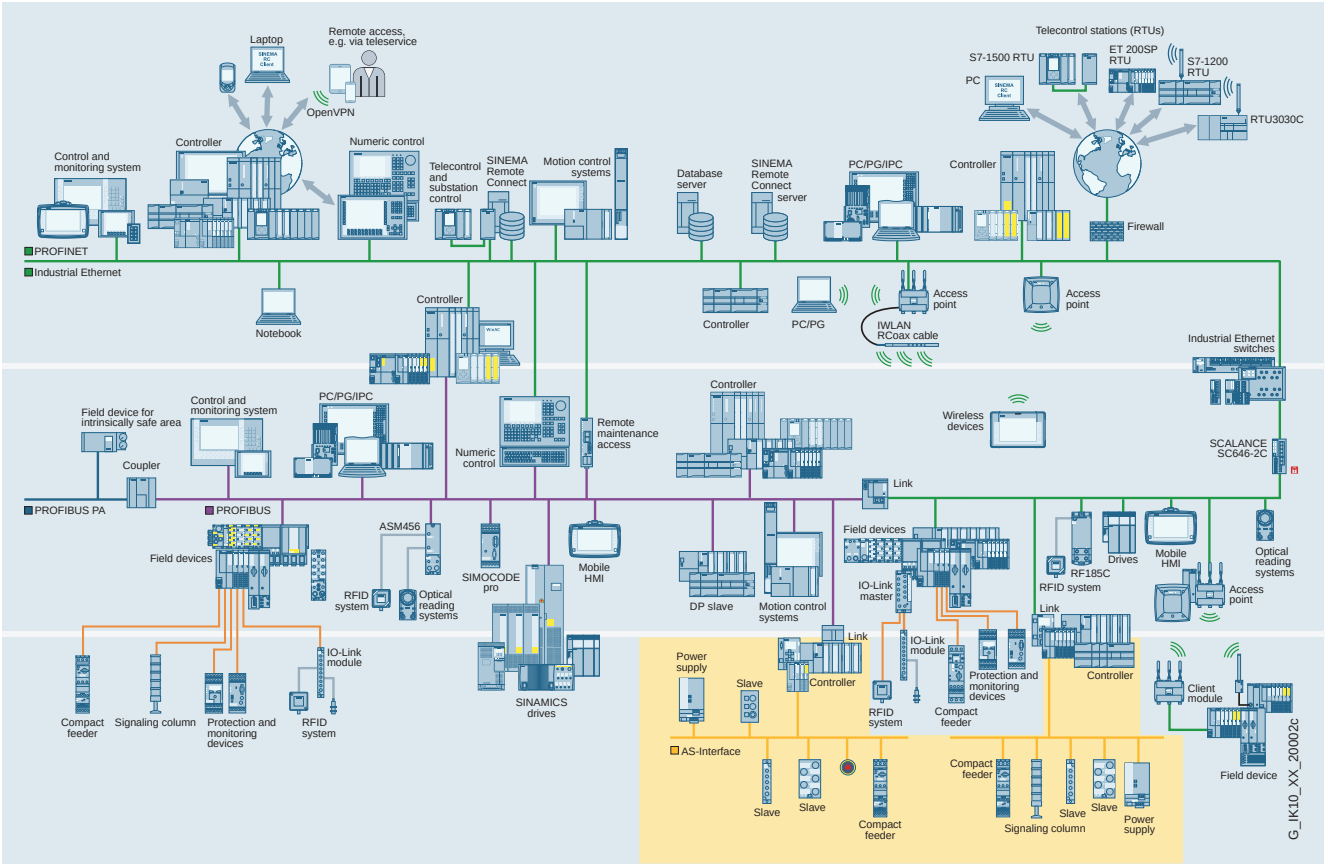
AS-Interface is an open, international standard according to IEC/EN 62026-2 for process and field communication. Leading manufacturers of actuators and sensors all over the world support the AS-Interface. Interested companies are provided with the electrical and mechanical specifications by the AS-Interface Association.

AS-Interface is a single master system. For automation systems from Siemens, there are communications processors (CPs), communication modules (CMs) and routers (links) that control the process or field communication as masters, and actuators and sensors that are activated as AS-Interface slaves.

**More information**

Homepage, see www.siemens.com/as-interface

Industry Mall, see www.siemens.com/product?as-interface



AS-Interface in the SIMATIC NET communications landscape

### Benefits

An important characteristic of the AS-Interface technology is the use of a shared two-wire cable for data transmission and distribution of auxiliary power to the sensors and actuators. An AS-i power supply unit or alternatively a standard power supply unit that meets the requirements of the AS-Interface transmission method and has an external AS-i data decoupling module is used for the distribution of auxiliary power.
The AS-Interface cable used for the wiring is mechanically coded and hence protected against polarity reversal and can be easily contacted by the insulation piercing method.

Elaborately wired control cables in the control cabinet and marshaling racks can be replaced by AS-Interface.

The AS-Interface cable can be connected to any points thanks to a specially developed cable and connection by the insulation piercing method.

With this concept you become extremely flexible and achieve high savings.

### Application

#### *I/O data exchange*

The AS-i master automatically transfers the inputs and outputs between the controller and the digital and analog AS-Interface slaves. Slave diagnostics information is forwarded to the control system when required.

The latest AS-Interface masters according to the AS-Interface specification V3.0 support integrated analog value processing. This means that data exchange with analog AS-Interface slaves is just as easy as with digital slaves.

#### *Command interface*

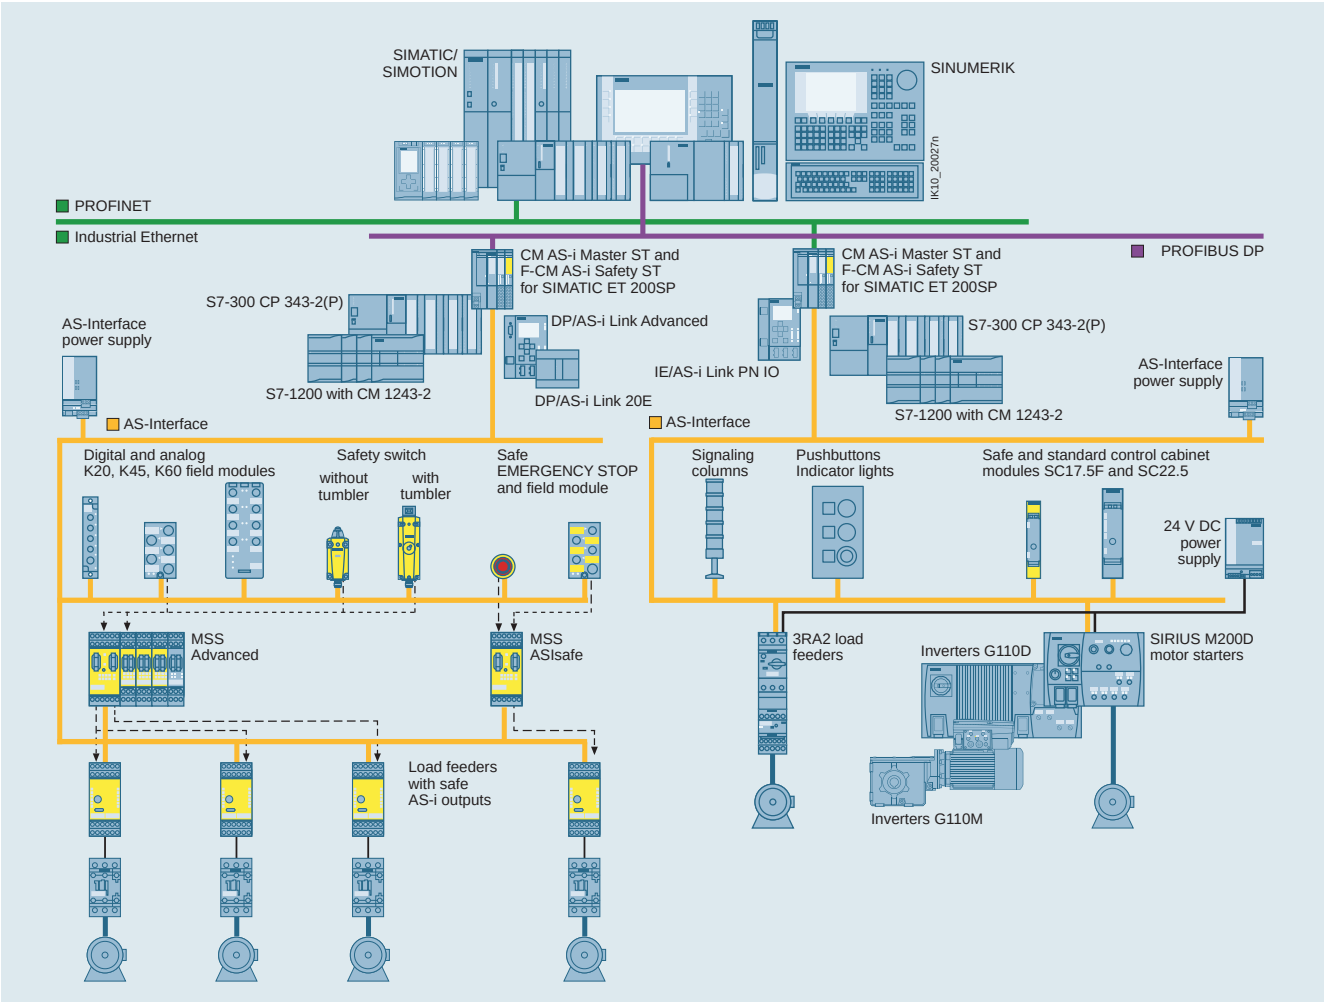
In addition to I/O data exchange with binary and analog AS-Interface slaves, the AS-Interface masters can provide a number of other functions through the command interface.

Hence it is possible, for example, for slave addresses to be issued, parameter values transferred or configuration information read out from user programs.

## Overview

To implement communication, the following components of a system installation are available:

- AS-i modules for central control units such as SIMATIC S7, ET 200M/ET 200SP distributed I/Os, or network transitions from PROFIBUS or PROFINET to AS-Interface
- AS-i power supply unit or alternatively a standard power supply unit in combination with an AS-i data decoupling module for the power supply to the slaves and sensors
- AS-Interface shaped cables
- Network components such as repeaters and extension plugs (cannot be used for AS-i Power24V)
- I/O modules (AS-i slaves) for connection of standard sensors/actuators
- Actuators and sensors with integrated AS-i slave
- Safe I/O modules (ASIsafe slaves) for transmitting safety-related data through AS-Interface
- Addressing device for setting slave addresses during commissioning



Example of a configuration with the system components

### *Features*

| | |
|---|---|
| Standard | IEC/EN 62026-2 |
| Topology | Line, star or tree structure (same as electrical wiring) |
| Transmission medium | Unshielded twisted pair (2 x 1.5 $mm^2$) for data and auxiliary power |
| Connection methods | Contacting of the AS-Interface cable by insulation piercing method |
| Maximum cable length | • 100 m without repeater<br>• 200 m with extension plug<br>• 300 m with two repeaters in series connection<br>• 600 m with extension plugs and two repeaters parallel switched<br>Longer cable lengths also possible through parallel switching of more repeaters. |

| | |
|---|---|
| Maximum cycle time | • 5 ms in maximum configuration with 31 standard addresses<br>• 10 ms in maximum configuration with 62 A/B addresses<br>• Profile-specific for slaves with extended data, e.g. analog slaves |
| Number of stations per AS-Interface line | • Up to 62 slaves (A/B addressing)<br>• Integrated analog value transmission |
| Number of binary sensors and actuators | max. 496 DI / 496 DQ |
| Access control | • Cyclic polling master/slave procedure<br>• Cyclic data acceptance from host (PLC, PC) |
| Error safeguard | Identification and repetition of faulty message frames |

## Overview

### *Scope of AS-Interface specification V3.0*

| Maximum number of slaves | | | Number of digital inputs | Number of digital outputs |
|---|---|---|---|---|
| Digital | Analog | ASIsafe | DI | DQ |
| 62 | 62 | 31 | 62 × 8 = 496 | 62 × 8 = 496 |

### *Basic data*

- AS-Interface specification 3.0 describes a fieldbus system with an AS-i master and up to 62 AS-i slaves.
- Every AS-i slave with standard addressing occupies one AS-i address (1...31).
- Slaves with extended addressing divide an AS-i address into an A address (1A...31A) and a B address (1B...31B). Up to 62 A/B slaves can be connected accordingly to one AS-Interface network.
- Mixed operation of slaves with standard addressing and extended addressing (A/B slaves) is possible without difficulty. The AS-i master identifies automatically which type of slave is connected, so no special adjustments are required of the user.
- One digital AS-i slave typically has up to four digital inputs and four digital outputs.
- Transmission of the digital input/output data requires max. 5 ms cycle time for 31 slaves; for further values, see "Communication cycle".
- Integrated analog value transmission permits access to both analog values and digital values without the need for any special function blocks.

### *Communication cycle*

| Maximum cycle time (digital signals) |
|---|
| • 5 ms with 31 slaves<br>• 10 ms with 62 slaves<br>• Up to 20 ms for slaves with A/B address 4 DI / 4 DQ<br>• Up to 40 ms for slaves with A/B address 8 DI / 8 DQ |

Each address is queried in max. 5 ms cycle time. If two A/B slaves are operated on one basic address (e.g. 12A and 12B), a maximum of 10 ms will be required to update the data of both slaves.

Slaves with A/B addressing transmit max. 4 DI / 3 DQ in one cycle.

Slaves with A/B addressing and 4 DQ or 4 DI / 4 DQ transmit the output data in two consecutive cycles. The double transmission time of these outputs has no effect in typical applications. The transmission procedure is performed automatically by the AS-i master in accordance with AS-i specification V3.0. These slaves are identified in the selection data with addressing type A/B (spec. V3.0).

Slaves with a single A/B address and 8 DI / 8 DQ transmit the input and output data in four consecutive cycles. The transmission time of the inputs/outputs of these slaves increases accordingly. The transmission procedure is performed automatically by the AS-i master in accordance with AS-i specification V3.0.

The slaves offered by Siemens with 8 DI or 8 DI / 2 DQ use two AS-i addresses so that the time-consuming procedure is not needed and a fast data update is ensured.

All slave types can be mixed and used on a single AS-Interface network.

For more information, such as the addressing type used by the AS-interface slave (standard or A/B address), see the "Selection and ordering data" for the relevant slave.

**More information**

System Manual "AS-Interface", see https://support.industry.siemens.com/cs/ww/en/view/26250840

### *AS-Interface product range*

AS-Interface products from Siemens use the current AS-Interface specification V3.0, which is standardized internationally as IEC/EN 62026-2.

The alternating pulse modulation developed more than 20 years ago for AS-Interface has proven to be a reliable transmission method with which the direct voltage supply for the bus modules and the connected sensors is provided on the standard two-wire line.

Multiple development stages were implemented to produce the proven-in-use system components with optimum EMC properties available today. The extensive product range with AS-Interface specification V3.0 undergoes constant innovation and is extremely cost-efficient, both to install and operate.

The bus cable can be retrofitted with repeaters of AS-Interface specification V3.0, and the modules function without any reciprocal interference. Master modules from Siemens enable ideal integration into the SIMATIC environment, in particular for the AS-Interface master of the ET 200SP distributed I/O system.

The underlying industrial requirements for the system concept are still applicable today: Numerous individual digital input and output signals are spatially distributed in the machine. Rather than having to install thick cable harnesses from the control cabinet to the sensors and actuators, smaller, more manageable AS-i modules are simply inserted in situ onto the bus cable in the IP67 enclosure, and the sensors and actuators connected with short M12 cables.

An additional AS-i module is installed in proximity to the next sensor to ensure that the length of the M12 cables is kept as short as possible. As analog signals are likewise transmitted without any problems, the AS-Interface also replaces the long, shielded analog cables.

Depending on requirements, the switching devices can also be connected to AS-i modules with terminal connection or conveniently used with the integrated AS-i connection. Motor controllers with digital and analog inputs and outputs are also offered with the current AS-Interface specification V3.0.

Safety signals are also transmitted simply and flexibly by the AS-Interface. The safety-related sensors for protective doors and EMERGENCY STOP buttons can be installed and retrofitted in any position.

The AS-i Safety functionality from Siemens has been continuously optimized and complies with the proven AS-Interface specification V3.0.

For industrial components which require greater transmission capacities, Siemens provide respective solutions with the suitable communication systems.

The AS-Interface system from Siemens continues to provide an ideal and consistent solution for a multitude of simple sensors and actuators, including safety technology and special applications.

Available masters with the latest AS-Interface specification V3.0

- CM AS-i Master ST, F-CM AS-i Safety ST (ET 200SP)
- CM 1243-2 (S7-1200)
- CP 343-2P / CP 343-2 (S7-300 / ET 200M)
- DP/AS-i Link Advanced, DP/AS-Interface Link 20E
- IE/AS-i Link PN IO

## Overview

**More information**

For a complete overview of AS-i Power24V-capable devices currently available from Siemens, see https://support.industry.siemens.com/cs/ww/en/view/42806066

For details of AS-i Power24V, see "AS-Interface" System Manual, https://support.industry.siemens.com/cs/ww/en/view/26250840

AS-Interface data decoupling modules for AS-i Power24V
Left: S22.5 data decoupling module,
Right: DCM 1271 data decoupling module for SIMATIC S7-1200

Parallel wiring frequently dominates, above all, in applications with very few I/Os. AS-Interface can, however, also replace extensive parallel wiring in small applications at a favorable price.

AS-i Power24V enables an already existing standard 24 V DC power supply unit to be used for the AS-i network.

### *Data and power in the standard AS-Interface network*

One of the great advantages of AS-Interface is the ability to convey not only data, but also the power needed for the connected slaves and sensors over the same unshielded two-conductor cable. This is owed to the service-proven AS-Interface power supply units which provide integrated data decoupling as well as overload and short-circuit protection and integrated ground-fault monitoring.

### *AS-i Power24V*

Instead of the AS-Interface power supply unit (with 30 V output voltage and integrated data decoupling) the AS-i cable is supplied via a data decoupling module from a 24 V standard power supply unit. The communication technology of AS-Interface works at the same high level of quality with an operating voltage of both 30 V DC and 24 V DC.

| | Key data of AS-i Power24V |
|---|---|
| **Number of slaves** | Up to 62 slaves and up to 31 safe slaves |
| **Topology** | Any |
| **Range** | Up to 50 m |
| **Components** | • 24 V power supply unit with low residual ripple and limitation to max. 40 V<br>• AS-i Power24V-capable data decoupling with integrated ground-fault detection<br>• AS-i Power24V-capable masters, slaves and components |

### *Requirements for operation of an AS-i Power24V network*

- When 24 V power supply units are used, the maximum network range of 50 m must be observed to reach slaves and sensors with a sufficient level of voltage (at least 18 V).
- The power supply units must comply with the PELV (Protective Extra Low Voltage) or SELV (Safety Extra Low Voltage) standard, have a residual ripple of < 250 mVpp, and must limit the output voltage to a maximum of 40 V in the event of a fault. We recommend SITOP power supplies, see Catalog Section 15 or KT10.1, https://support.industry.siemens.com/cs/ww/en/view/109745655.
- When used in conjunction with standard 24 V power supply units, each AS-Interface network requires AS-i Power24V-capable data decoupling, see page 14/77 onwards.
- For reliable operation of an AS-i network with 24 V voltage, it is important that the masters, slaves and other components are approved for AS-i Power24V. AS-i Power24V-capable AS-i components can also be used without restriction in standard 30 V AS-i networks.
- Use of repeaters or extension plugs in AS-i Power24V networks is not permitted.

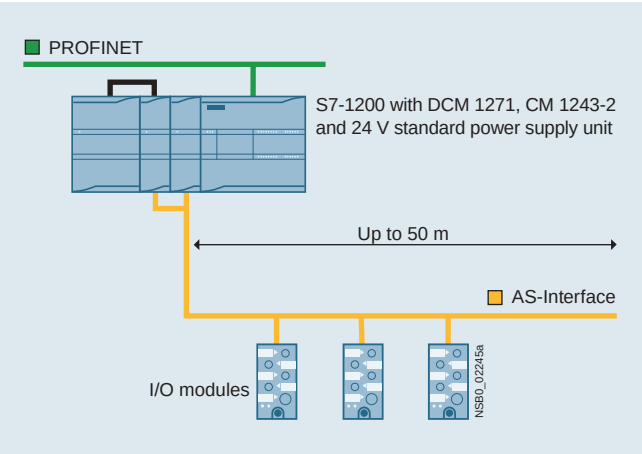
## Benefits

In small control cabinets the AS-i power supply unit can be replaced by an AS-i data decoupling module that is connected to an existing 24 V power supply unit.

- The advantages of the AS-i communication system in terms of commissioning, maintenance and diagnostics can be fully exploited.
- If a double data decoupling module is used, two AS-i networks can be supplied.

## Application

### *Configuration of an AS-i Power24V network*



Configuration of an AS-i Power24V network with an AS-Interface DCM 1271 data decoupling module and S7-1200 (simple network)

# AS-Interface: ASIsafe

## Introduction

### Overview

**More information**

For further information and typical circuit diagrams on safety engineering, see https://support.industry.siemens.com/cs/ww/en/view/83150405

#### *ASIsafe – Safety is included*

ASIsafe enables the integration of safety-related components such as EMERGENCY STOP pushbuttons, protective door switches, cable-operated switches or other AS-i safety sensors in an AS-Interface network. These are fully compatible with the familiar AS-Interface components (masters, slaves, power supplies, repeaters, etc.) in accordance with IEC/EN 62026-2 and are operated in conjunction with them on the yellow AS-Interface cable.

#### *Tested safety*

- Protective door switches
- Cable-operated switches
- Other AS-i safety sensors

The transmission method for safety-related signals is released for applications up to PL e according to EN ISO 13849-1 and up to SIL 3 (IEC 61508/EN 62061).

#### *Higher-level control*

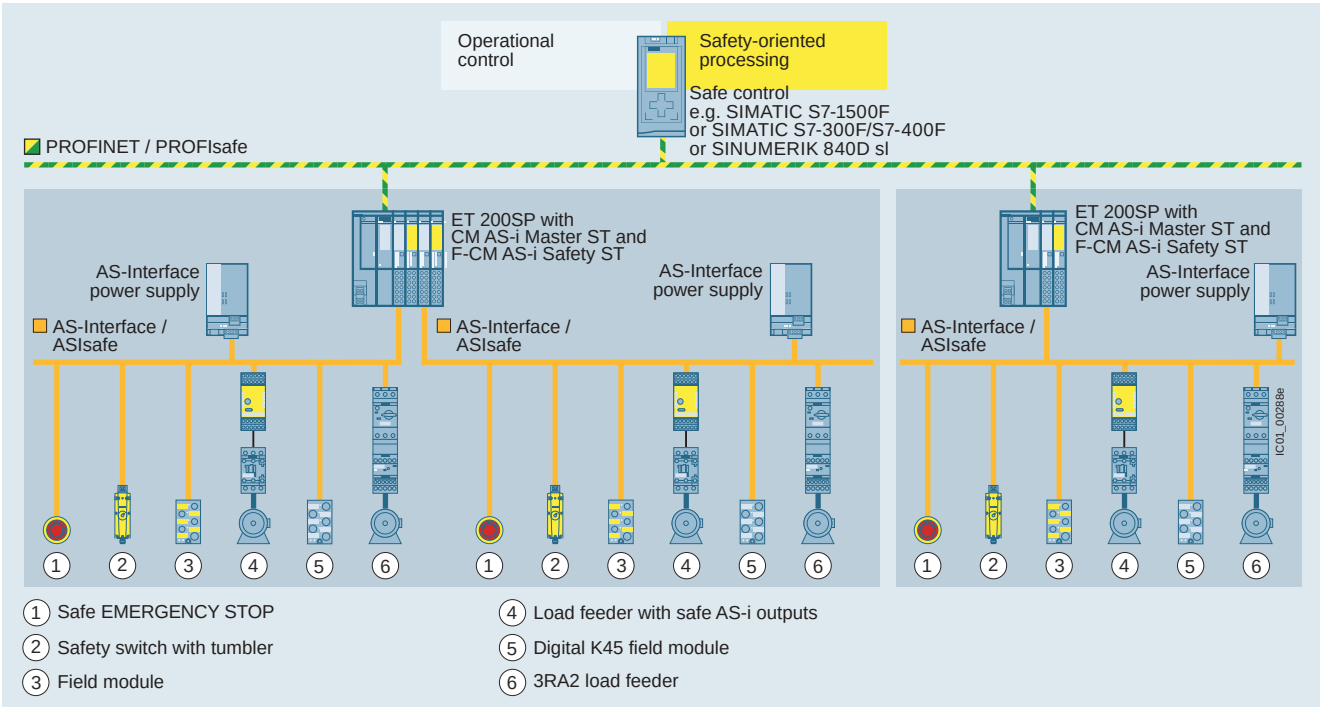
As usual, nodes on the AS-Interface bus are controlled in operation by the standard program of the higher-level SIMATIC (F) CPU or by a SINUMERIK control.

#### *Configuring safety functions*

In order to implement safe functions, the information from the safe and standard nodes must be combined logically and further parameters set. The configuration of the safety functions depends on which safety solution is being used:

- AS-i safety solution with F-CPU: In conjunction with the modular safety AS-i master, which is formed by combining the CM AS-i Master ST and F-CM AS-i Safety ST modules in an ET 200SP station, all safety functions and combinations are configured via STEP 7 and processed in the controller (F-CPU) by the fail-safe program.
- In the case of the AS-i safety solution with local evaluation by MSS: In conjunction with the Modular Safety System all safety functions and combinations are configured using the SIRIUS Safety ES software and processed in the MSS central unit.

#### *AS-i safety solution with F-CPU*



AS-Interface configuration with AS-i master modules in the ET 200SP

The AS-i communication modules in the ET 200SP facilitate the use of AS-Interface under fail-safe SIMATIC or SINUMERIK controllers.

The allocation of tasks is as follows:

- Acquisition of safety-related signals via safe input slaves on the AS-Interface bus.
  Further signals can be detected through other F-DI modules of the SIMATIC.
- Evaluation and processing of signals via the fail-safe SIMATIC or SINUMERIK control
- Reacting by means of safety output modules on the AS-Interface bus or other SIMATIC F-DQ modules

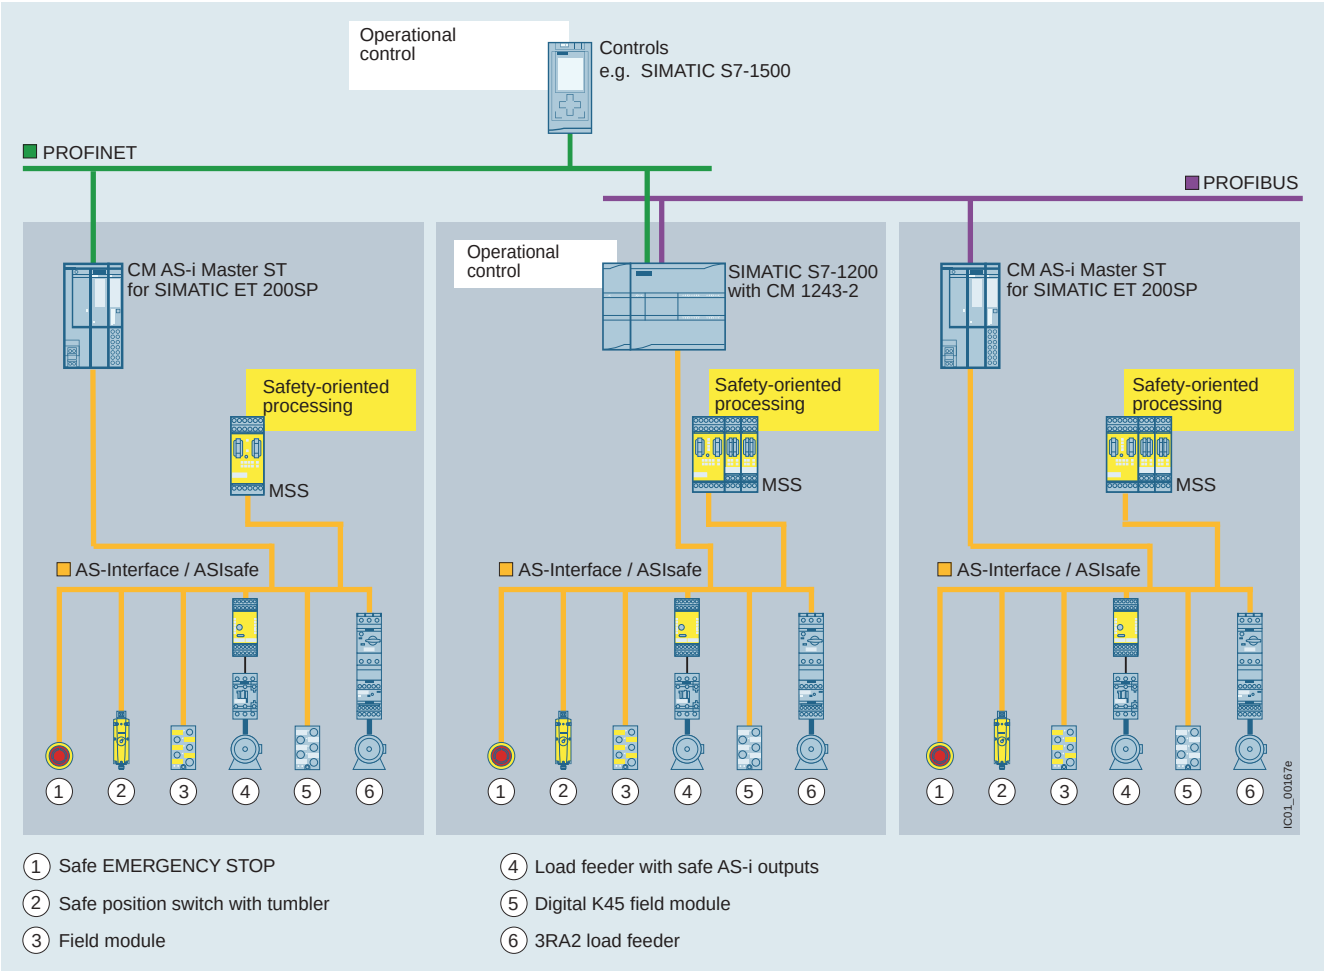
Simple combination of the CM AS-i Master ST and F-CM AS-i Safety ST modules in one ET 200SP station results in a powerful, safety-oriented network transition between PROFINET (or PROFIBUS) and AS-Interface, which can be expanded further in a modular fashion with further I/O modules of the ET 200SP.

Using these design methods, it is possible to create configurations for virtually any application. Besides the single AS-i master, double, triple or generally multiple masters can be realized with or without fail-safe functionality.

# AS-Interface: ASIsafe

## Introduction

***AS-i safety solution with local evaluation by MSS***



AS-Interface design with 3RK3 Modular Safety System (MSS)

The local AS-i safety solution uses the 3RK3 Modular Safety System (MSS) for safety-related processing. In this case, one standard controller (i.e. no F-CPU) and one standard AS-i master are sufficient.

The allocation of tasks is as follows:

- Acquisition of safety-related signals via safe input slaves on the AS-Interface bus.
  Further signals can be acquired via F-DI inputs of the central unit or the expansion modules of the MSS.
- Evaluation and processing of signals via the central unit of the MSS
- Reaction via safe output modules on the AS-Interface bus or via F-DQ outputs of the central unit or expansion modules of the MSS

SIRIUS 3RK3 Modular Safety System, see Catalog Section 13

### Benefits

- Simple system structure thanks to standardized AS-Interface technique
- Safety-related and standard data on the same bus
- Existing systems can be expanded quickly and easily
- Optimum integration in TIA (Safety Diagnostics) and Safety Integrated
- Inclusion of the safety signals in the plant diagnostics, also on existing HMI panels
- Approved to PL e according to EN ISO 13849-1 or SIL 3 according to IEC 61508
- ASIsafe is certified by TÜV (Germany), NRTL (USA) and INRS (France)

### Application

Integrated safety technology in the AS-Interface system can be used wherever EMERGENCY STOP buttons, safety gate interlocks, safety switches, light grids and two-hand operation are installed.

## Overview

AS-Interface safety modules: K45F (left), K20F (center) and SC17.5F (right)

S45F SlimLine module, safe AS-i output

Safety modules for AS-Interface (ASIsafe modules) are available for field use in degree of protection IP67 (K20F and K45F compact modules) and for the control cabinet (SC17.5F SlimLine Compact modules) in degree of protection IP20.

A very compact module with an optimum price/performance ratio is thus available for every application.

All modules for the connection of (mechanical) switches and safety sensors with contacts feature crossover monitoring of the connected sensor line.

### *AS-Interface safety modules*

The following modules are available for selection:

K20F compact safety modules for operation in the field

Being only 20 mm wide, the K20F module is particularly well suited for applications where modules need to be arranged in the most confined of spaces. The K20F modules are connected to the AS-Interface with a round cable with M12 cable box instead of with the AS-Interface flat cable. This enables extremely compact installation. The flexibility of the round cable means that it can also be used on moving machine parts without any problems. The K20 modules are also ideal for such applications as their non-encapsulated design makes them particularly light in weight.

K45F compact safety modules for use in the field

The platform of the K45F modules covers the connection of ("mechanical") switches/safety sensors with contacts:

- K45F 2 F-DI: Two safety-related inputs in operation up to Category 2 according to EN ISO 13849-1. If Category 4 is required, a two-channel input is available on the module.
- K45F 2 F-DI / 2 DQ: There are also two standard outputs in addition to the safe inputs. Supplied from the yellow AS-i cable
- K45F 2 F-DI / 2 DQ $U_{aux}$: same as K45F 2 F-DI/2 DQ, but supplied from the black 24 V DC cable
- K45F 4 F-DI: Four safety-related inputs in operation up to Category 2, two for Category 4. Extremely compact double slave (uses two standard AS-i addresses)

SC17.5F SlimLine Compact safety modules with a width of just 17.5 mm for use in control cabinets and local control boxes

With a width of only 17.5 mm, the safe SC17.5F SlimLine Compact modules are ideal for space-saving use in a control cabinet. The modules have more than two safety inputs for connecting signals to ASIsafe networks in the control cabinet. For operation up to Category 2, both inputs can be separately assigned; if Category 4 is required, a two-channel input is available on the module.

There are also two module variants which have two standard outputs in addition to the two safety inputs. The outputs are supplied either from the yellow AS-Interface cable alone, or via auxiliary voltage from the black 24 V DC cable. The supply voltage is set via a slide switch on the rear of the device.

When using several modules, they can be connected simply via the optional device connector. This simplifies the wiring. The yellow AS-i bus cable and the 24 V DC auxiliary voltage $U_{aux}$ then only need to be connected to one module.

S45F SlimLine safety modules with safety outputs for the safe distributed disconnection of actuators

With the S45F SlimLine safety module, a safe output signal of the ET 200SP module F-CM AS-i Safety ST can be used for distributed safety-related disconnection via ASIsafe.

To this end, the S45F module has a safety-related two-channel relay output. As an additional possibility the module offers normal switching of the output using an AS-i standard output bit.

The module has three digital inputs and two digital outputs for the additional connection of sensors and actuators. These can be used, among other things, for the required monitoring of downstream contactors of the feedback circuit.

The S45F module can also be controlled in a safety-related manner, for example by the modular 3RK3 ASIsafe/Advanced safety system. The module contains an AS-i slave for the non-safety-related inputs/outputs.

1) Module occupies two AS-Interface addresses

Standard I/O modules for AS-Interface

- For degree of protection IP67, see page 14/50 onwards
- For degree of protection IP20, see page 14/65 onwards

The existing SlimLine series of I/O modules for use in the control cabinet and local control boxes is being replaced by the new SlimLine Compact series. We recommend that these new devices are used in future.

For the conversion table, see page 14/67.

Note:

The previous SlimLine devices are still available for use as replacements in existing systems. As a result of the innovation, the new SlimLine Compact devices are not fully compatible in terms of either mechanical dimensions or electrical properties.

## Overview

CM 1243-2 communication module for S7-1200

**More information**

Manuals, see https://support.industry.siemens.com/cs/ww/en/ps/15750/man
For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/61892138

The CM 1243-2 communication module is the AS-Interface master for the SIMATIC S7-1200 and has the following features:

- Connection of up to 62 AS-Interface slaves
- Integrated analog value transmission
- Supports all AS-Interface master functions in accordance with the AS-Interface specification V3.0
- Indication of the operating state on the front of the device displayed via LED
- Display of operating mode, AS-Interface voltage faults, configuration faults and peripheral faults via LED behind the front panel
- Compact enclosure in the design of the SIMATIC S7-1200
- Suitable for AS-i Power24V and for AS-Interface with 30 V voltage: A standard 24 V power supply unit can be used in combination with the optional DCM 1271 data decoupling module.
- Configuration and diagnostics via the TIA portal

### *Design*

The CM 1243-2 communication module is positioned to the left of the S7-1200 CPU and linked to the S7-1200 via lateral contacts.

It has:

- Terminals for two AS-i cables (internally jumpered) via two screw terminals each respectively
- One terminal for connection to the functional ground
- LEDs for indication of the operating state and fault statuses of the connected slaves

The screw terminals (included in scope of supply) can be removed to facilitate installation.

### *Function*

The CM 1243-2 supports all specified functions of the AS-Interface specification V3.0.

The values of the digital AS-i slaves can be activated via the process image of the S7-1200. During configuration of the slaves in the TIA Portal, the values of the analog AS-i slaves can also be accessed directly in the process image.

It is also possible to exchange all data of the AS-i master and the connected AS-i slaves with the S7-1200 via the data record interface.

Changeover of the operating mode, automatic application of the slave configuration and the re-addressing of a connected AS-i slave can be implemented via the control panel of the CM 1243-2 in the TIA Portal.

The optional DCM 1271 data decoupling module (see "Accessories", page 14/29) has an integrated detection unit for detecting ground faults on the AS-Interface cable. The integrated overload protection also disconnects the AS-Interface cable if the drive current required exceeds 4 A. For more information on DCM 1271, see page 14/79.

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

### *Configuration*

To configure CM 1243-2, you require STEP 7 V11 + SP2 or higher.

For STEP 7 V11 + SP2 or higher, the additional Hardware Support Package for CM 1243-2 is required. This is available via the Industry Online Support Portal, see https://support.industry.siemens.com/cs/ww/en/view/72341852.

The software enables user-friendly configuration and diagnostics of the AS-Interface master and any connected slaves.

Alternatively, you can also apply the AS-Interface ACTUAL configuration at the "touch of a button" via the control panel integrated in the TIA Portal/STEP 7.

When operated on an S7-1200 CPU with firmware version V4.0 or higher, the firmware version V1.1 (or higher) is required for the CM 1243-2.

## Benefits

- More flexibility and versatility in the use of SIMATIC S7-1200 as the result of a significant increase in the number of digital and analog inputs/outputs available
- Very easy configuration and diagnostics of the AS-Interface via the TIA Portal (STEP 7 V11+SP2 or higher)
- Simple operation with AS-Interface power supply (see page 14/73) possible without restrictions.
- Alternatively: No need for the AS-i power supply unit with AS-i Power24V. The AS-Interface cable is supplied through an existing 24 V DC PELV power supply unit. For decoupling, the AS-i DCM 1271 data decoupling module is required, see "Accessories" and page 14/79.
- LEDs for indication of fault statuses for fast diagnostics
- Monitoring of AS-Interface voltage facilitates diagnostics

## Application

The CM 1243-2 is the AS-Interface master connection for the 12xx CPUs of the SIMATIC S7-1200. Through connection to AS-Interface, the number of digital inputs and outputs available for the S7-1200 is greatly increased (max. 496 DI/496 DQ on the AS-Interface per CM).

The integrated analog value processing also makes the analog values available at the AS-Interface for the S7-1200.
Up to 31 analog slaves with a standard address (each with up to four channels) or up to 62 analog slaves with an A/B address (each with up to two channels) are possible per CM.

Operating conditions

- The CM 1243-2 communication module exchanges data with the S7-1200 CPU with a cycle time of 10 ms.
- The AS-i cycle time depends on the AS-i bus capacity and is up to 5 ms in the case of 31 slaves addresses; for more information, see Equipment Manual "AS-i Master CM 1243-2 and AS-i DCM 1271 data decoupling module", https://support.industry.siemens.com/cs/ww/en/view/57358958.
- For calculation of the maximum switching frequency at inputs/outputs of AS-i slaves, these cycle times and the runtime of the user program must be added up.

## Overview

CP 343-2P/CP 343-2

**More information**

Manuals, see https://support.industry.siemens.com/cs/ww/en/ps/15754/man
For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/61892138
AS-Interface block library for SIMATIC PCS 7 for easy connection of AS-Interface to PCS 7, see Catalog KT10.1 - SITOP Power Supply

The CP 343-2P communications processor is the AS-Interface master for the SIMATIC S7-300 and the ET 200M distributed I/O station, with user-friendly parameterizing options.

The CP 343-2 is the basic version of the module.

The CP 343-2P/CP 343-2 has the following characteristics:

- Connection of up to 62 AS-Interface slaves
- Integrated analog value transmission
- Support of all AS-Interface master functions in accordance with the AS-Interface specification V3.0
- Status displays of operating states and indication of the readiness for operation of connected slaves by means of LEDs in the front panel
- Fault indications (including AS-Interface voltage errors, configuration errors) by means of LEDs on the front plate.
- Compact enclosure in the design of the SIMATIC S7-300
- Suitable for AS-i Power24V (from product version 2 / firmware version 3.1) and for AS-Interface with 30 V voltage
- Additionally for CP 343-2P: Supports the configuration of the AS-Interface network with STEP 7 V5.2 and higher

### *Design*

The CP 343-2P/CP 343-2 is connected like an I/O module to the S7-300. It has:

- Two terminal connections for connecting the AS-Interface cable directly.
- LEDs in the front panel for indicating the operating state and the readiness for operation of all connected and activated slaves
- Pushbuttons for switching over the master operating state and for adopting the existing ACTUAL configuration of the AS-i slave as the TARGET configuration

### *Function*

The CP 343-2P/CP 343-2 support all specified functions of the AS-Interface specification V3.0.

The CP 343-2P/CP 343-2 each occupy 16 bytes in the I/O address area of the SIMATIC S7-300. The digital I/O data of the standard slaves and A slaves is saved in this area. The digital I/O data of the B slaves and the analog I/O data can be accessed with the S7 system functions for read/write data records.

If required, master calls can be performed with the command interface, e.g. read/write parameters, read/write configuration.

For more information, see https://support.industry.siemens.com/cs/ww/en/view/51678777.

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

### *Configuration*

All connected AS-Interface slaves are configured at the press of a button. No further configuration of the CP is required.

Additionally for CP 343-2P

The CP 343-2P also supports configuring of the AS-Interface network with STEP 7 V5.2 and higher. Specifying the AS-i configuration in HW-Config facilitates the setting of slave parameters and documentation of the plant. Uploading the ACTUAL configuration of an already configured AS-Interface network is also supported. The saved configuration cannot be overwritten at the press of a button and is therefore tamper-proof.

## Benefits

- Shorter startup times through simple configuration at the press of a button
- Design of flexible machine-related structures using the ET 200M distributed I/O system
- Provides diagnostics of the AS-Interface network
- Well suited also for complex applications thanks to connection options for 62 slaves and integral analog value processing
- Reduction of standstill and servicing times in the event of a fault thanks to the LED indicators:
  - Status of the AS-Interface network
  - Slaves connected and their readiness for operation
  - Monitoring of the AS-Interface voltage
- Lower costs for stock keeping and spare parts inventory because the CP can be used for the SIMATIC S7-300 and also for the ET 200M
- Additionally for CP 343-2P: Improved plant documentation and support for service assignments thanks to a description of the AS-Interface configuration in the STEP 7 project
- Simple operation with AS-Interface power supply (see page 14/73) possible without restrictions.
- Alternatively: No need for the AS-i power supply unit with AS-i Power24V. The AS-Interface cable is supplied through an existing 24 V DC PELV power supply unit. An S22.5 AS-i data decoupling module (e.g. 3RK1901-1DE12-1AA0) is required for the decoupling, see page 14/77.

## Application

The CP 343-2P/CP 343-2 is the AS-Interface master connection for the SIMATIC S7-300 and the ET 200M.

Through connection to AS-Interface it is possible to access max. 248 DI/248 DQ per CP, using 62 A/B slaves with 4 DI/4 DQ each.

With the integrated analog value processing, it is easy to transmit analog signals. Up to 62 analog slaves with an A/B address (each with up to two channels) or up to 31 analog slaves with a standard address (each with up to four channels) are possible per CP.

The CP 343-2P is the further development of the CP 343-2 and contains its entire functionality. An existing STEP 7 user program for a CP 343-2 can thus be used without restrictions with a CP 343-2P. It is only in STEP 7 HW-Config that the two modules are configured differently, with the CP 343-2P offering additional options. This is why the CP 343-2P is recommended.

## Overview

CM AS-i Master ST for SIMATIC ET 200SP

**More information**

SIMATIC ET 200SP Manual Collection, see https://support.industry.siemens.com/cs/ww/en/view/84133942

Diagnostics blocks with visualization, see https://support.industry.siemens.com/cs/ww/en/view/109479103

AS-Interface block library for SIMATIC PCS 7 for easy connection of AS-Interface to PCS 7, see Catalog KT10.1 - SITOP Power Supply

Released combinations of the AS-i modules for ET 200SP, see https://support.industry.siemens.com/cs/ww/en/view/103624653

The CM AS-i Master ST communication module is designed for use in the SIMATIC ET 200SP distributed I/O system and has the following features:

- Connection of up to 62 AS-Interface slaves
- Supports all AS-Interface master functions according to the AS-Interface specification V3.0
- User-friendly configuration with graphic display of the AS-i line in TIA Portal V12 or higher, or via GSD in other systems
- Supply via AS-Interface cable
- Suitable for AS-i Power24V and for AS-Interface with 30 V voltage
- Integrated ground-fault monitoring for the AS-Interface cable
- Through connection to AS-Interface, the number of digital inputs and outputs available for the control system is greatly increased (max. 496 DI/496 DQ on the AS-Interface per CM AS-i Master ST).
- Integrated analog value processing

### *ET 200SP distributed I/O system*

The SIMATIC ET 200SP is a scalable and highly flexible distributed I/O system for connecting the process signals to a central control system via PROFIBUS or PROFINET.

Up to eight CM AS-i Master STs can be plugged into a SIMATIC ET 200SP with the IM 155-6 PN standard interface module.

More information, see the SIMATIC ET 200SP Manual Collection.

### *Design*

The CM AS-i Master ST module has an ET 200SP module enclosure with a width of 20 mm. A C0 type BaseUnit (BU) is required for use in the ET 200SP.

The communication module has LED indicators for diagnostics, operation, AS-i voltage and AS-i slave status and offers informative front-side module inscription for

- Plain-text marking of the module type and function class
- 2D matrix code (Article No. and serial number)
- Circuit diagram
- Color coding of the CM module type: Light gray
- Hardware and firmware version
- Complete article number

### *Function*

The CM AS-i Master ST communication module supports all specified functions of the AS-Interface specification V3.0.

The input/output values of the digital AS-i slaves can be activated via the cyclic process image. The values of the analog AS-i slaves are accessible via the cyclic process image (firmware V1.1 or higher) or via data record transfer.

If required, master calls can be performed with the command interface, e.g. read/write parameters, read/write configuration.

Changeover of the operating mode, automatic application of the slave configuration and the re-addressing of a connected AS-i slave can be implemented via the control panel of the CM AS-i Master ST in STEP 7.

Expansions as from firmware version V1.1

For the implementation of modular machine concepts, the AS-i slaves can be activated or deactivated via the PLC program (option handling). The configuration of AS-i slaves can be modified while being executed, thus enabling variable machine set-ups and tool changing with integrated input/output modules during ongoing operation. AS-i input/output modules can be added to the system without deactivating the controller.

An existing AS-i installation can be read into the STEP 7 hardware configuration and adapted and documented in the project. Analog values are transmitted via the cyclic process image, the length of which is adjustable and extendable up to 288 bytes (depending on the interface module (IM) used).

Diagnostic information is accessed via automatic alarm indications, via the process image or data record reading in the user program or in the STEP 7 engineering system in a graphical overview matrix. The transmission quality of the AS-i network can also be read out. To avoid configuration errors, duplicate addresses can be detected on the AS-i network.

The new functions are available with TIA Portal STEP 7 V13 SP1 or with STEP 7 V5.5 with HSP 2092 V3.0[1]. Configuration is possible with SIMATIC CPUs S7-300 up to S7-1500 and with a SINUMERIK 840D sl or other controller.

In the network view, the AS-i slaves' online diagnostics status can be displayed directly on the slaves (for S7-1500 CPUs with firmware version V2.0 or higher, with TIA Portal STEP 7 V14 or higher).

[1] For HSP 2092, see https://support.industry.siemens.com/cs/ww/en/view/23183356.

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

### *Configuration*

The following software is required for configuration of the CM AS-i Master ST module:

- STEP 7 (TIA Portal) V12 or higher or V13 SP1 or higher (for firmware V1.1) or
- STEP 7 (classic) V5.5 SP3 HF4 or higher with HSP 2092 or HSP 2092 V3.0 (for firmware V1.1) or
- the GSD file of the ET 200SP with STEP 7 or another engineering tool

STEP 7 enables user-friendly configuration and diagnostics of the AS-i master and any connected slaves.

Alternatively, you can also apply the AS-Interface ACTUAL configuration as the TARGET configuration at the "touch of a button" via the control panel integrated in the TIA Portal or an optional expansion button. Configuration with the GSD file is possible only with the button.

The CM AS-i Master ST module occupies up to 288 input bytes and up to 288 output bytes in the I/O data of the ET 200SP station. The I/O assignment depends on the configuration in STEP 7.

Together with an ET 200SP CPU 1510SP/1512SP (firmware V1.8 or higher) or 1515SP PC, preprocessing of safe AS-i signals directly in the ET 200SP station and setting up of an independent AS-i Safety station without a higher-level CPU are possible (TIA Portal V13 SP1 Update 4 and higher).

Configuration of an AS-Interface network with CM AS-i Master ST via the TIA Portal

## Benefits

The CM AS-i Master ST for ET 200SP communication module enables modular, simple and high-performance expansion of AS-interface networks via engineering in the TIA Portal.

Up to eight CM AS-i Master ST units can be plugged into one ET 200SP station with IM 155-6 PN Standard. The maximum configuration depends on the interface module used.

Multiple masters as well as single masters can thus be implemented in the ET 200SP depending on the number of modules.

Together with the interface module, a scalable PROFINET/AS-i Link or PROFIBUS/AS-i Link can be assembled.

Using STEP 7, the AS-i network is consistently configured and programmed with only one configuration tool.

The PRONETA PC program (for ET 200SP with PROFINET interface module) is available for convenient input/output testing during the commissioning of an AS-i network without a CPU; see www.siemens.com/proneta.

For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/109479103.

## Overview

F-CM AS-i Safety ST for SIMATIC ET 200SP

**More information**

SIMATIC ET 200SP Manual Collection, see
https://support.industry.siemens.com/cs/ww/en/view/84133942
Diagnostics blocks with visualization, see
https://support.industry.siemens.com/cs/ww/en/view/109479103
Released combinations of the AS-i modules for ET 200SP, see
https://support.industry.siemens.com/cs/ww/en/view/103624653

The F-CM AS-i Safety ST fail-safe communication module supplements an AS-Interface network without additional wiring to produce a safety-related AS-i network.

Important features:

- Fail-safe communication module for the ET 200SP
  - 31 fail-safe input channels in the process image
  - 16 fail-safe output channels in the process image
  - Certified up to SIL 3 (IEC 61508/EN 62061), PL e (EN ISO 13849-1)
  - Parameterization conforms with other fail-safe I/O modules of the ET 200SP
- The communication module supports PROFIsafe in PROFINET and PROFIBUS configurations. Can be used with fail-safe SIMATIC S7-300F/S7-400F CPUs and S7-1500F CPUs and also the fail-safe versions of the ET 200SP station with ET 200SP F-CPU 1510SP F/1512SP F (firmware V1.8 or higher) or 1515SP PC F.
- For reading up to 31 fail-safe AS-i input slaves
  - Two sensor inputs/signals for each fail-safe AS-i input slave
  - Adjustable evaluation of sensor signals: two-channel or 2 x single-channel
  - Integrated discrepancy evaluation in the case of two-channel signals
  - Integrated AND operation in the case of 2 x single-channel signals
  - Input delay can be parameterized
  - Start-up test can be set
  - Sequence monitoring can be activated
- For control of up to 16 fail-safe AS-i output circuit groups
  - The output circuit groups are controlled independently of one another.
  - One output circuit group can act on one or more actuators (e.g. to switch drives simultaneously).
  - An actuator (e.g. a contactor) is interfaced via a fail-safe AS-i output module (e.g. safe SlimLine module S45F, Article No. 3RK1405-1SE15-0AA2, see page 14/36).
  - Simple fault acknowledgment via the process image
- Simple module replacement thanks to automatic importing of the safety parameters from the coding element
- Comprehensive diagnostic options
- Can be plugged onto type C1 or type C0 BaseUnits (BU)
- Informative automatic alarm indications (firmware V1.0.1 or higher)
- Supply via AS-Interface voltage
- Eight LED indicators for diagnostics, operating state, fault indication and supply voltage
- Informative front-side module inscription
  - Plain-text marking of the module type and function class
  - 2D matrix code (Article No. and serial number)
  - Circuit diagram
  - Color coding of the CM module type: Light gray
  - Hardware and firmware version
  - Complete article number
- Optional labeling accessories
  - Labeling strips
  - Reference identification label

### *Design*

The fail-safe F-CM AS-i Safety ST module has an ET 200SP module enclosure with a width of 20 mm.

One AS-i master according to the AS-i specification V3.0 and safe AS-i input slaves and/or safe AS-i output modules are needed for operation. The CM AS-i Master ST communication module (Article No. 3RK7137-6SA00-0BC1) is recommended as the AS-i master for the ET 200SP, see from page 14/32 onwards.

Simple combination of the CM AS-i Master ST and F-CM AS-i Safety ST modules in one ET 200SP station results in a powerful, safety-oriented network transition between PROFINET (or PROFIBUS) and AS-Interface, which can be expanded further in a modular fashion.

Combination of an ET 200SP interface module, CM AS-i Master ST and F-CM AS-i Safety ST

With the digital and analog I/O modules of the ET 200SP, additional local inputs and outputs can be realized so as to ensure that the modular AS-i router complies precisely with customer requirements. Expansion variants for almost every application are possible thanks to the selection of standard and fail-safe I/O modules.

Besides the single AS-i master, double, triple or generally multiple masters can be realized with or without fail-safe functionality.

Supported BaseUnits

With the combination of the CM AS-i Master ST and F-CM AS-i Safety ST modules, the CM module is plugged onto a light type C0 BaseUnit and, immediately to the right of it, the F-CM module is plugged onto a dark type C1 BaseUnit. The AS-i cable is connected only on the light BaseUnit of the CM module.

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

### *Configuration*

The following software is required for configuration of the F-CM AS-i Safety ST module:

- STEP 7 (TIA Portal) V13 and higher with HSP 0070[1] and Safety Advanced.
  STEP 7 V13 SP1 is required for connection to the S7-1500F.
  When configuring with STEP 7 V13 SP1, the latest version of HSP 0070 V2.0 (or higher) is an essential prerequisite.
  STEP 7 Safety V13 SP1 Update 4 and HSP 0070 V3.0 (or higher) are needed for configuration of the F-CM AS-i Safety ST module in an ET 200SP station with ET 200SP F-CPU 1510SP F/1512SP F (firmware V1.8 or higher) or 1515SP PC F.

or

- STEP 7 (classic) V5.5 SP3 HF4 or higher with HSP 2093[2] and Distributed Safety V5.4 SP5 or F-Configuration Pack SP11 or SIMATIC S7 F/FH Systems

Configuration and programming are done entirely in the STEP 7 user interface. No additional configuration software is needed for commissioning.

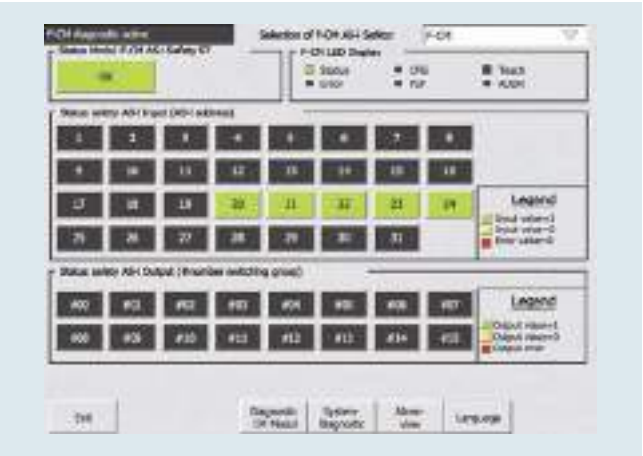
Data management – together with all other configuration data of the SIMATIC – is realized completely in the S7 project.

The input and output channels are assigned to the process image automatically and manual linking via configuration blocks is not necessary.

If the F-CM AS-i Safety ST module is replaced, all necessary settings are automatically imported into the new module.

The F-CM AS-i Safety ST module occupies 16 input bytes and 8 output bytes in the I/O data of the ET 200SP station.

For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/109479103.



Diagnostics block for F-CM AS-i Safety ST

[1] For HSP 0070, see https://support.industry.siemens.com/cs/ww/en/view/72341852.

[2] For HSP 2092, see https://support.industry.siemens.com/cs/ww/en/view/23183356.

## Application

Thanks to use of the fail-safe module in the ET 200SP, it is possible to fulfill the safety-related application requirements in a manner that is integrated in the overall automation solution.

The safety functions required for fail-safe operation are integrated in the modules. Communication with the fail-safe SIMATIC S7 CPUs is realized via PROFIsafe.

The safety application is programmed in the SIMATIC S7 F-CPU with Distributed Safety/S7 F/FH Systems/Safety Advanced. The fail-safe input signals of the ASIsafe slave modules are read via the AS-i bus line and are combined with any chosen further signals in the fail-safe program.

The fail-safe output signals can be output via safe SIMATIC output modules or also directly via AS-i – with the help of safe AS-i output modules, e.g. safe SlimLine S45F modules, Article No. 3RK1405-1SE15-0AA2 (see page 14/26). No special functions are required for this in the program.

Operation with SINUMERIK 840D sl is possible with SINUMERIK software version V4.7 SP2 HF1 or higher.

Together with an ET 200SP station with ET 200SP F-CPU 1510SP F/1512SP F (firmware V1.8 and higher) or 1515SP PC F, pre-processing of safe AS-i signals directly in the ET 200SP station is possible, as well as the configuration of an autonomous AS-i Safety station without a higher-level CPU.

## Overview

DP/AS-i Link Advanced

**More information**

AS-Interface block library for SIMATIC PCS 7 for easy connection of AS-Interface to PCS 7, see Catalog KT10.1 - SITOP Power Supply
Manual, see https://support.industry.siemens.com/cs/ww/en/ps/24507/man

| PN | DP-M | DP-S | AS-i M | | |
|---|---|---|---|---|---|
| | | ● | ● | | |

The DP/AS-i Link Advanced is a compact router between PROFIBUS (DP slave) and AS-Interface, with the following features:

- Single and double AS-Interface master (according to AS-Interface specification V3.0) for connection of 62 AS-Interface slaves or 124 AS-Interface slaves (with a double master)
- Integrated analog value transmission
- Integrated ground-fault monitoring for the AS-Interface cable
- User-friendly local diagnostics and startup by means of a full graphic display and control keys or through a web interface with a standard browser on the PC screen
- Vertical integration (standard web interface) through Industrial Ethernet
- Supply voltage from the AS-Interface cable or alternatively with 24 V DC (optional)
- Suitable for AS-i Power24V (from product version 4 / firmware version 2.2) and for AS-Interface with 30 V voltage
- Module exchange without entering the connection parameters (e.g. PROFIBUS address) using C-PLUG (optional)

### *Design*

- Compact plastic enclosure in degree of protection IP20 for standard rail mounting
- COMBICON plug-in screw terminals
- Compact design:
  - Pixel graphics display in the front panel for detailed display of the operating state and readiness for operation of all connected AS-Interface slaves
  - 6 pushbuttons for starting up and testing the AS-Interface line directly on the DP/AS-i Link Advanced
  - LED indication of the operating state of PROFIBUS DP and AS-Interface
  - Integrated Ethernet port (RJ45 socket) for user-friendly startup, diagnostics and testing of DP/AS-i Link Advanced through a web interface using a standard browser
- Small mounting depth thanks to recessed plug mounting
- Operation without fans and batteries

### *Functionality*

Communications

The DP/AS-i Link Advanced enables a PROFIBUS DP master to cyclically access the I/O data of all the slaves of a lower-level AS-Interface segment.

The DP/AS-i Link Advanced occupies the following address space:

- As a single master: 32 bytes of input data and 32 bytes of output data in which the I/O data of the connected AS-Interface slaves (standard and A/B addressing) of an AS-i line is stored.
- As double master, double the number of bytes
- Optional additional I/O bytes for data from analog slaves

The size of the input/output image can be compressed so that only the actually required I/O address area is occupied in the system of the DP master. The integrated evaluation of analog signals is just as easy as access to digital values because the analog process data also lie directly in the I/O address area of the CPU.

PROFIBUS DP-V1 Masters also provide the option of triggering AS-Interface master calls over the acyclic PROFIBUS services (e.g. write parameters, amend addresses, read diagnostic values). Using an operating display in AS-i Link it is possible to fully commission the lower-level AS-Interface line even without a CPU.

DP/AS-i Link Advanced is equipped with an additional Ethernet port, which enables use of the integrated web server. The web server can be called up with any standard web browser (e.g. Internet Explorer) without additional software. It allows all diagnostics information, the set bus configuration and parameters and, if applicable, any adjustments to be displayed on the PC. Firmware updates are also possible using this port.

The optional C-PLUG supports module exchange without entering the connection parameters (PROFIBUS address etc.), keeping downtimes to a minimum in the event of a fault.

Diagnostics

The following diagnostics is possible using LEDs, the display and control keys, web interface or STEP 7:

- Operating state of the DP/AS-i Link Advanced
- Status of the link as a PROFIBUS DP slave
- Diagnostics of the AS-Interface network
- Message frame statistics
- Standard diagnostics pages in the web interface for fast diagnostics access through Ethernet using a standard browser
- For the use of the web interfaces no network settings are necessary on the PC (Zeroconf procedure)
- The reporting of diagnostic events is optionally possible via email or SNMP Trap. The integrated diagnostic buffer saves the events including time stamp

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

***Configuration***

The DP/AS-i Link Advanced can be configured as follows:

- With STEP 7 (TIA Portal) V12 or higher or STEP 7 (classic) V5.4 or higher: In the case of STEP 7 configuration, the AS-Interface configuration can be uploaded in STEP 7. Furthermore, AS-Interface slaves can also be conveniently configured in HW-Config (slave selection dialog)
- By adopting the ACTUAL configuration of the AS-Interface on the display
- Alternatively DP/AS-i Link Advanced can be integrated into the engineering tool using the PROFIBUS GSD file (e.g. STEP 7 versions earlier than V5.4 or engineering tools from non-Siemens suppliers)

## Benefits

- Short startup times through simple configuration at the press of a button and testing of the AS-Interface line using the display or web interface
- Reduction of standstill and servicing times in the event of a slave failure thanks to user-friendly diagnostics using the display or web interface and through simple module exchange with the help of the C-PLUG exchange medium
- Reduced amount of engineering work thanks to user-friendly configuration of Siemens slaves using the slave catalog in HW-Config (STEP 7)
- Costs saved by the double AS-Interface master when large volumes of project data are involved
- Simple operation with AS-Interface power supply unit (see page 14/73) possible without restrictions, no additional operating voltage is required.
- Alternatively: No need for the AS-i power supply unit with AS-i Power24V. The AS-Interface cable is supplied through an existing 24 V DC PELV power supply unit. An S22.5 AS-i data decoupling module (e.g. 3RK1901-1DE12-1AA0) is required for the decoupling, see page 14/77.
- For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/618921

## Application

The DP/AS-i Link Advanced is a PROFIBUS DP-V1 slave (according to IEC 61158/IEC 61784) and an AS-Interface master (based on AS-Interface specification V3.0 according to IEC/EN 62026-2). It enables transparent data access to AS-Interface from PROFIBUS DP.

### *Exchanging data with the PROFIBUS DP master*

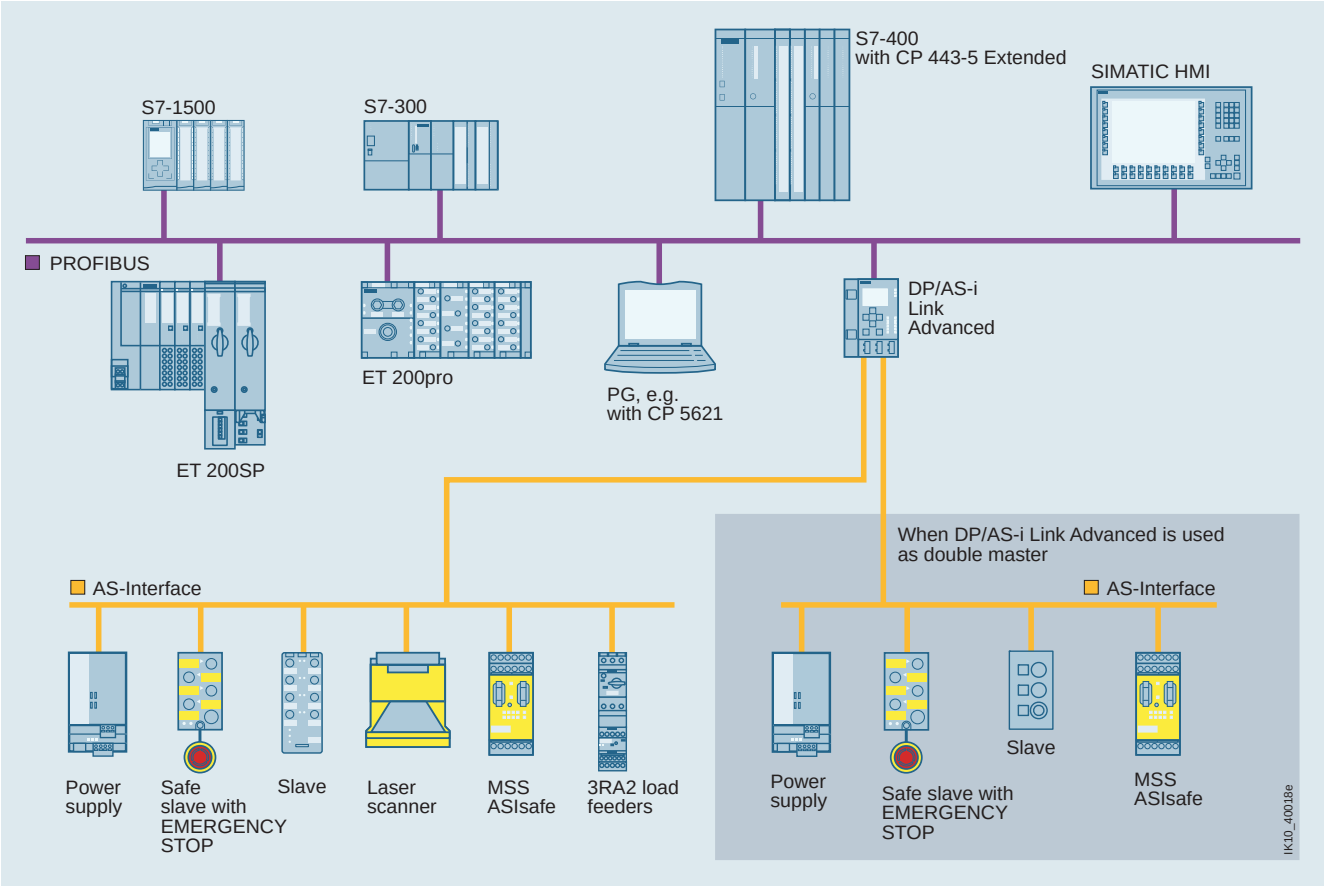
PROFIBUS DP masters (DP-V0) can exchange I/O data cyclically with the AS-Interface. DP masters with acyclic services (DP-V1) are additionally able to initiate AS-Interface master calls (e.g. reading/writing the AS-i configuration during normal operation). As such, the DP/AS-i Link Advanced is particularly well-suited for a distributed construction and for connection of a lower-level AS-Interface network.

### *Single master*

For applications with typical volumes of project data, it is sufficient to use the DP/AS-i Link Advanced in its version as an AS-Interface single master. The single master can operate up to 248 DI / 248 DQ, using 62 A/B slaves with 4 DI / 4 DQ each.

### *Double master*

The AS-Interface double master version of DP/AS-i Link Advanced is suitable for applications with large volumes of data. In this case, twice the volume of project data can be used on two AS-Interface lines running independently of each other. The double master can operate up to 496 DI / 496 DQ, using two AS-i networks each with 62 A/B slaves with 4 DI / 4 DQ each.



Integration of AS-Interface on PROFIBUS through DP/AS-i Link Advanced as single/double master

DP/AS-Interface Link 20E manual

**More information**

Manual “DP/AS-Interface Link 20E”, see https://support.industry.siemens.com/cs/ww/en/view/5281638

| PN | DP-M | DP-S | AS-i M | | |
|---|---|---|---|---|---|
| | | ● | ● | | |

DP/AS-Interface Link 20E connects PROFIBUS DP to AS-Interface and has the following features:

- PROFIBUS DP slave and AS-Interface master
- Up to 62 AS-Interface slaves, each with four digital inputs and four digital outputs as well as analog slaves can be connected
- Integrated analog value transmission
- Supports all AS-Interface master functions according to the AS-Interface specification V3.0
- Supply from AS-Interface cable; hence no additional power supply required
- Suitable for AS-i Power24V (from product version 2 / firmware version 3.1) and for AS-Interface with 30 V voltage
- Supports uploading of the AS-Interface configuration in STEP 7 V5.2 and higher

### *Design*

- Compact plastic enclosure in degree of protection IP20 for standard rail mounting
- LEDs in the front panel for indicating the operating state and functional readiness of all connected slaves
- Setting of PROFIBUS DP address is possible by pressing a button
- LED indication of the PROFIBUS DP slave address, PROFIBUS DP bus faults and diagnostics
- Two pushbuttons for switching over the operating state and for adopting the existing ACTUAL configuration as the TARGET configuration

### *Functionality*

Communications

The DP/AS-Interface Link 20E enables a DP master to access all the slaves of an AS-Interface network.

The DP/AS-Interface Link 20E occupies a standard 32 bytes of input data and 32 bytes of output data in which the digital I/O data of the connected AS-Interface slaves (standard and A/B addressing) of an AS-i line is stored.

The size of the input/output image can be compressed so that only the actually required I/O address area is occupied in the system of the PROFIBUS DP master.

The analog I/O data can be accessed with the S7 system functions for read/write data records.

Configuration

The DP/AS-Interface Link 20E is configured as follows:

- With STEP 7 (TIA Portal) from V12 or STEP 7 (classic) from V5.1 SP2:
  In the case of STEP 7 configuration, the AS-Interface configuration can be uploaded from STEP 7 V5.2. Furthermore, AS-Interface slaves from Siemens can also be conveniently configured in HW Config (slave selection dialog).
- By adopting the ACTUAL configuration of the AS-Interface by using the SET pushbutton on the front panel.
- Alternatively, DP/AS-Interface Link 20E can be integrated by means of the PROFIBUS GSD file in the engineering tool (e.g. for STEP 7 V5.1 and lower or for non-Siemens engineering tools).

## Benefits

- Reduction of installation costs because the power is supplied entirely via the AS-Interface cable, which means that no additional power supply is required
- Short startup times thanks to easy configuration at the touch of a button
- The LED indicators help reduce downtime and service times if a slave fails
- Quick and easy commissioning by reading the AS-Interface configuration
- For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/61892138.

# AS-Interface: Routers

## DP/AS-Interface Link 20E

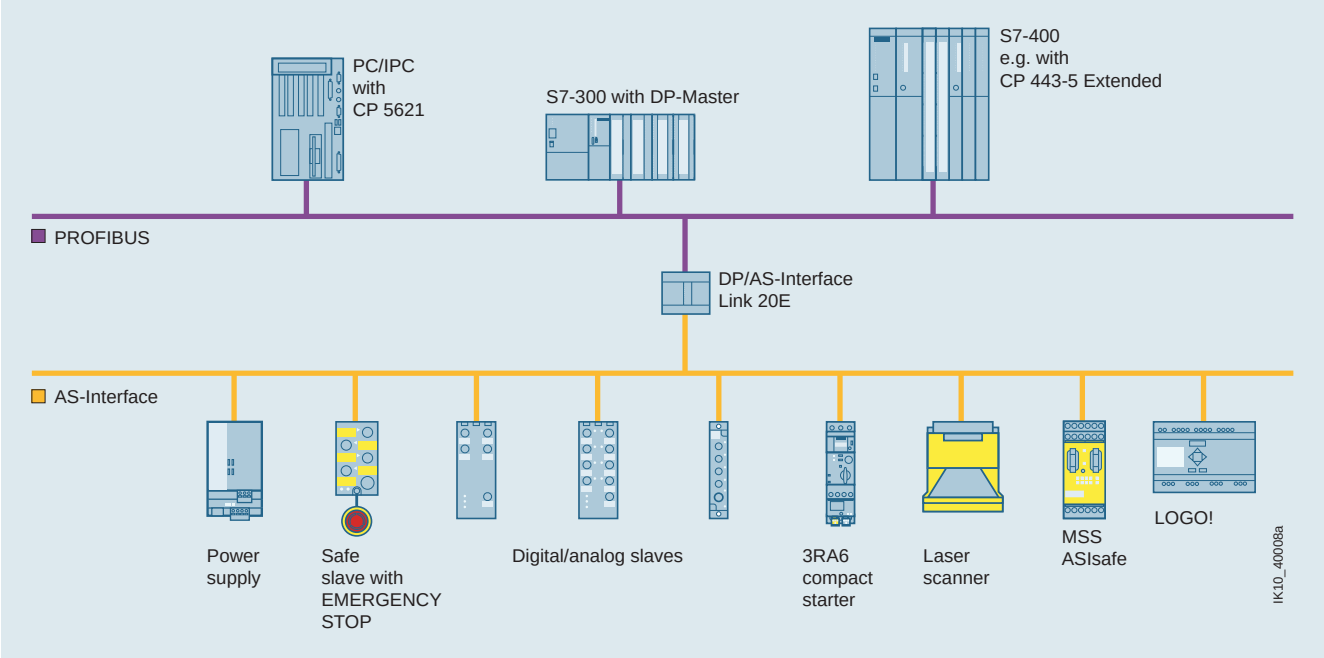
### Application

The DP/AS-Interface Link 20E is a PROFIBUS DP slave (according to IEC 61158/IEC 61784) and an AS-Interface master (according to IEC/EN 62026-2). It enables the AS-Interface to be operated on PROFIBUS DP.

Up to 248 DI / 248 DQ can be operated via the DP/AS-Interface Link 20E using 62 A/B slaves with 4 DI / 4 DQ each.

PROFIBUS DP masters (DP-V0) can exchange digital I/O data cyclically with the AS-Interface.

PROFIBUS DP masters with acyclic services (DP-V1) are additionally able to exchange analog I/O data and initiate AS-Interface master calls (e.g. reading/writing the AS-i configuration during normal operation).



Transition from PROFIBUS DP to AS-Interface using DP/AS-Interface Link 20E

## Overview

IE/AS-i Link PN IO
Single master (picture on left) and double master (picture on right)

**More information**

Manual, see https://support.industry.siemens.com/cs/ww/en/view/22712154
AS-Interface block library for SIMATIC PCS 7 for easy connection of AS-Interface to PCS 7, see Catalog KT10.1 - SITOP Power Supply

| PN | DP-M | DP-S | AS-i M | | |
|---|---|---|---|---|---|
| ● | | | ● | | |

The IE/AS-i Link PN IO is a compact router between PROFINET and AS-Interface, with the following features:

- Single and double AS-Interface master (according to AS-Interface specification V3.0) for connection of 62 or 124 AS-Interface slaves (with a double master)
- Integrated analog value transmission
- Integrated ground-fault monitoring for the AS-Interface cable
- User-friendly local diagnostics and startup by means of a full graphic display and control keys or through a web interface with a standard browser on the PC screen
- Vertical integration (standard web interface) through Industrial Ethernet
- Supply via AS-Interface cable or with 24 V DC
- Suitable for AS-i Power24V and for AS-Interface with 30 V voltage
- Module exchange without entering the PROFINET connection parameters when using the C-PLUG (optional)
- Costs saved by the double AS-Interface master when large volumes of project data are involved

Note:

As an alternative to the IE/AS-i Link PN IO, a high-performance router can be set up between PROFINET and AS-Interface by combining the CM AS-i Master ST and F-CM AS-i Safety ST modules in an ET 200SP station (for safety-related applications), see pages 14/34 and 14/38.

### *Design*

- Compact plastic enclosure in degree of protection IP20 for standard rail mounting
- COMBICON plug-in screw terminals
- Compact design
- Pixel graphics display in the front panel for detailed display of the operating state and readiness for operation of all connected AS-Interface slaves
- Six pushbuttons for starting up and testing the AS-Interface line directly on the IE/AS-i Link PN IO
- LED display of the operating state of PROFINET IO and AS-Interface
- Integrated 2-port switch (RJ45 socket) for connection to Industrial Ethernet
- Small mounting depth thanks to recessed plug mounting
- Operation without fans and batteries

### *Functionality*

Communications

The IE/AS-i Link PN IO enables a PROFINET IO controller to cyclically access the I/O data of all the slaves of a lower-level AS-Interface segment. Also supported are the expanded slave types with higher I/O data volume according to AS-i specification V3.0.

The IE/AS-i Link PN IO occupies the following address space:

- As a single master with full expansion: 62 bytes of input data and 62 bytes of output data in which the I/O data of the connected AS-Interface slaves (standard and A/B addressing) of an AS-i line is stored.
- As double master, double the number of bytes
- Optional additional I/O bytes for data from analog slaves

The size of the input/output image can be compressed so that only the actually required I/O address area is occupied in the system of the IO controller.

The integrated evaluation of analog signals is just as easy as access to digital values because the analog process data also lie directly in the I/O address area of the CPU.

PROFINET IO controllers are additionally able to initiate AS-Interface master calls (e.g. to write parameters, change addresses, read diagnostic values) through the acyclic PROFINET services.

Using an operating display in AS-Interface Link it is possible to fully commission the lower-level AS-i line.

The IE/AS-i Link PN IO is equipped with two Ethernet ports, which are connected by an internal switch. With the Ethernet it is possible in addition to use the integrated web server.
The web server can be called up with any standard web browser (e.g. Internet Explorer) without additional software. It enables the PC to present all diagnostics information and to display the set bus configuration and parameters as well as their adaptation where applicable. Firmware updates are also possible using this port.

The optional C-PLUG supports module replacement without manually entering the connection parameters (PROFINET device name), keeping downtimes to a minimum in the event of a fault.

Diagnostics

The following diagnostics is possible using the display and control keys, web interface or STEP 7:

- Operating state of the IE/AS-i Link PN IO
- State of the link as a PROFINET IO device
- Diagnostics of the AS-Interface network
- Message frame statistics
- Standard diagnostics pages in the web interface for fast diagnostics access through Ethernet using a standard browser
- Reporting of diagnostic events is optionally possible via e-mail or SNMP trap. The integrated diagnostic buffer saves the events including time stamp

Notes on security:

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens products and solutions represent only one component of such a concept.

For more information about the subject of Industrial Security, see www.siemens.com/industrialsecurity.

***Configuration***

The IE/AS-i Link PN IO is configured as follows:

- With STEP 7 (TIA Portal) from V15 or STEP 7 (classic) from V5.4: In the case of STEP 7 configuration, the AS-Interface configuration can be uploaded from STEP 7 V5.4 SP2. Furthermore, AS-Interface slaves from Siemens can also be conveniently configured in HW-Config (slave selection dialog)
- Alternatively, IE/AS-i Link PN IO can be integrated by means of the PROFINET GSD file in the engineering tool (e.g. for TIA Portal versions earlier than V15 or for STEP 7 versions earlier than V5.4 SP2, or for non-Siemens engineering tools).

## Benefits

- Short startup times through simple configuration at the press of a button and testing of the AS-Interface line using the display or web interface
- Reduction of standstill and servicing times in the event of a slave failure thanks to user-friendly diagnostics using the display or web interface
- Costs saved by the double AS-Interface master when large volumes of project data are involved
- Simple operation with AS-Interface power supply unit (see page 14/73) possible without restrictions, no additional operating voltage is required.
- Alternatively: No need for the AS-i power supply unit with AS-i Power24V. The AS-Interface cable is supplied through an existing 24 V DC PELV power supply unit. An S22.5 AS-i data decoupling module (e.g. 3RK1901-1DE12-1AA0) is required for the decoupling, see page 14/77.
- For diagnostics during ongoing operation, diagnostics blocks with clearly arranged visualization on the SIMATIC HMI panel are available or can be downloaded free of charge via a web browser, see https://support.industry.siemens.com/cs/ww/en/view/618921

## Application

The IE/AS-i Link PN IO is a PROFINET IO device (according to IEC 61158/IEC 61784) and an AS-Interface master (based on AS-Interface specification V3.0 according to IEC/EN 62026-2). It enables transparent data access to AS-Interface from PROFINET.

### *Exchanging data with PROFINET IO controllers*

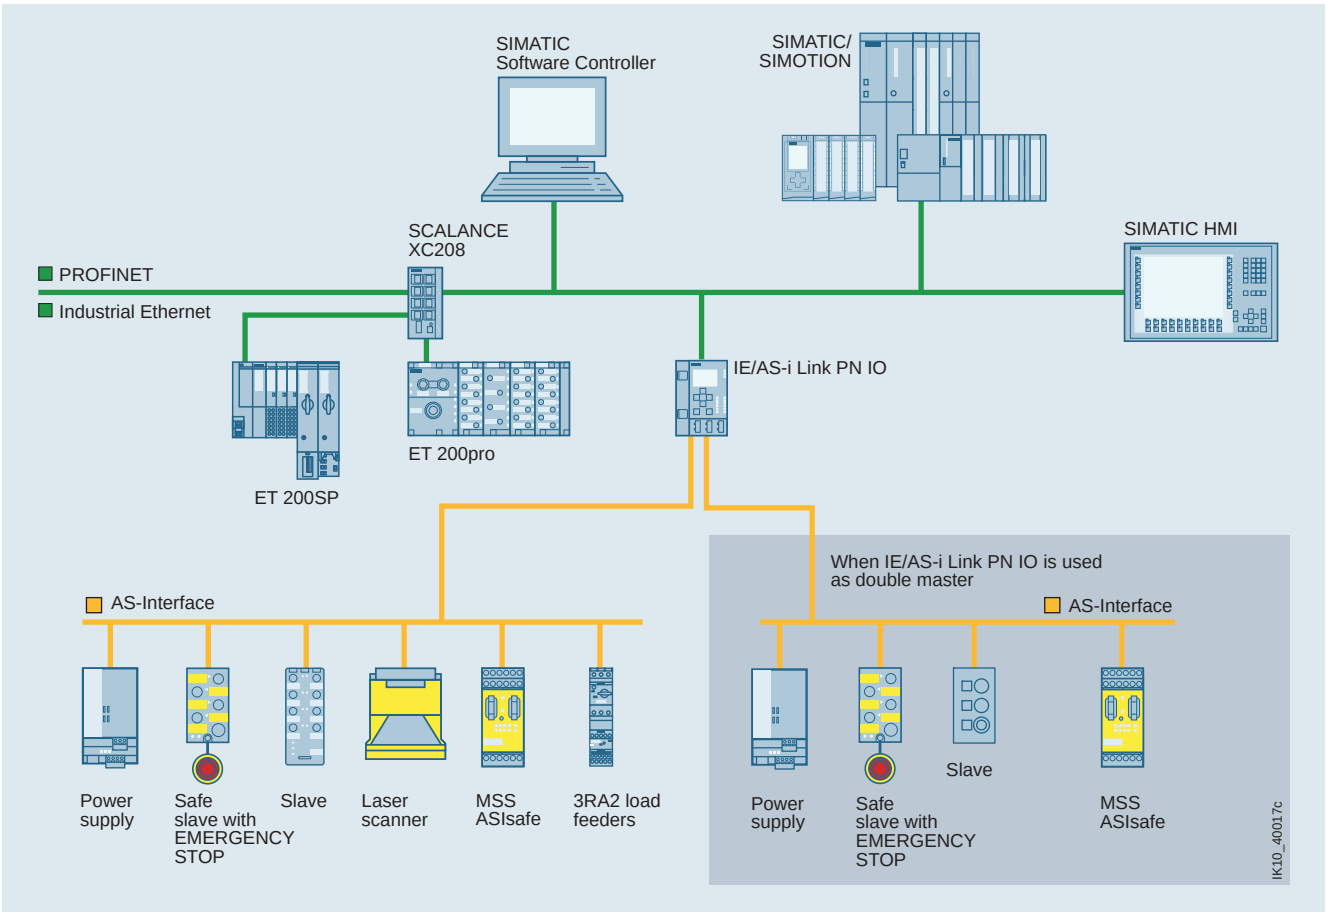
PROFINET IO controllers can exchange I/O data with AS-Interface in cyclic mode and can perform AS-i master calls in addition with acyclic services (e.g. reading/writing the AS-i configuration during normal operation). The IE/AS-i Link PN IO is therefore suitable for distributed configurations and for integrating a lower-level AS-Interface network.

### *Single master*

The AS-i single master version of IE/AS-i i Link PN IO is suitable for applications with typical volumes of data. The single master can operate up to 248 DI / 248 DQ, using 62 A/B slaves with 4 DI / 4 DQ each.

### *Double master*

The AS-i double master version of IE/AS-i Link PN IO is suitable for applications with large volumes of data. In this case, twice the volume of project data can be used on two AS-i lines running independently of each other. The double master can operate up to 496 DI / 496 DQ, using two AS-i networks each with 62 A/B slaves with 4 DI / 4 DQ each.

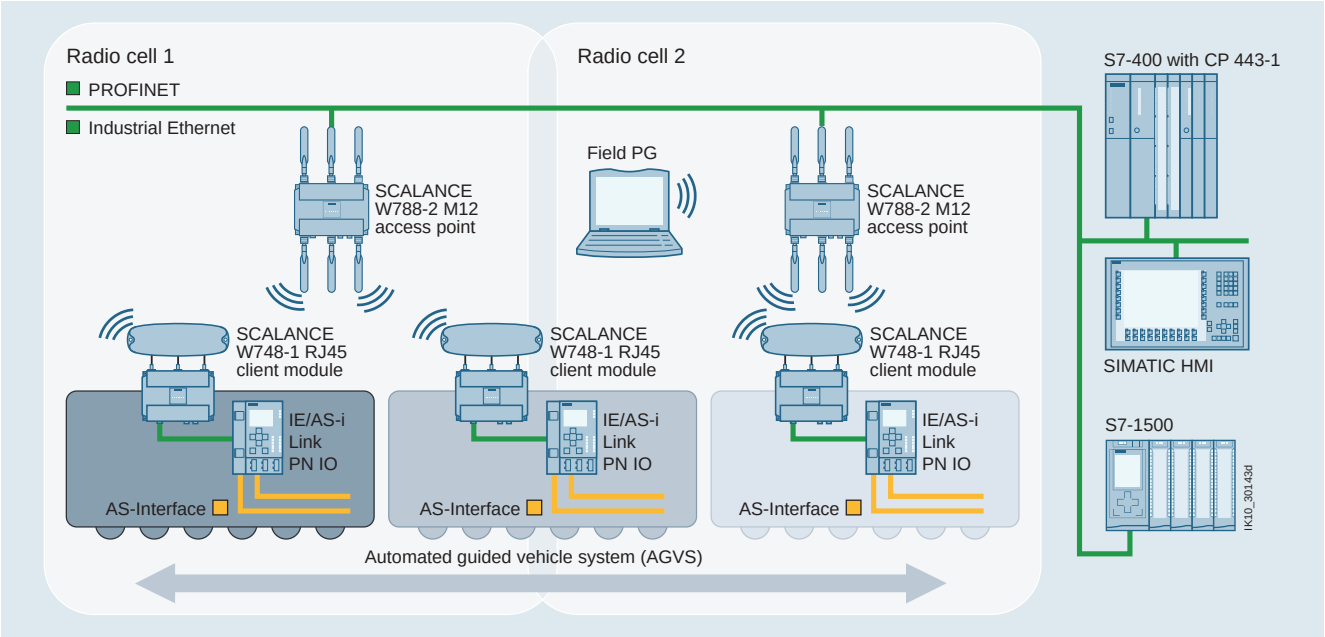


Integration of AS-Interface on PROFINET through IE/AS-i Link PN IO as single/double master

### *Wireless communication*

Using an upstream IWLAN client module, e.g. SCALANCE W748-1 RJ45, an AS-Interface line can be integrated in the PROFINET world by wireless means.

Sample uses are applications which up to now have been performed with fault-prone tow chain or collector wire technology. Maintenance costs are thus reduced.



Wireless communication between Industrial Ethernet and AS-Interface components

## Overview

K60

K45

K20

Three coordinated series of AS-Interface compact modules with digital and analog compact modules and a high degree of protection are available for use in the field:

- Digital modules with a high degree of protection
  - Series K60, see pages 14/52 and 14/54
  - Series K45, see page 14/57
  - Series K20, see page 14/58
- Analog modules with a high degree of protection
  - Series K60, see page 14/61

All compact modules are characterized by particularly simple handling. The K60 and K45 modules are mounted with a mounting plate. The mounting plate is used to mount the AS-Interface flat cables and enables mounting on a wall or standard mounting rail.

The particularly narrow K20 modules are directly mounted without a mounting plate and connected to the AS-Interface using a round cable.

### *Connection types*

For flexible connection of different sensors and actuators, the following PIN assignments are available on the I/O modules with M12 sockets:

Standard assignment

With the standard assignment, one sensor/actuator is connected per M12 socket. In this case the signal for the outputs is acquired at PIN4 while the signal for the inputs is acquired at PIN4 and PIN2. As the result, sensors can be connected directly to PIN2 and PIN4.

Y-assignment

With the Y-assignment, two sensors or two actuators can be connected to one M12 socket. In this case, both PIN4 and PIN2 are provided for one sensor signal and one actuator signal on each M12 socket.

Y-II assignment

The Y-II assignment offers the following options:

- Individual connection of a sensor/actuator to one M12 socket
- Connection of two sensors/actuators to one M12 socket as follows:
  - The signal of the first sensor/actuator is connected to PIN4 of the first socket.
  - The signal of the second sensor/actuator is connected to PIN2 of the first socket and to PIN4 of the second socket.

  In this case, the second socket is not required and is closed with a sealing cap.

### *Overview of digital compact modules*

The following table provides an overview of the important features of the digital compact modules.

| Version | K60 | K45 | K20 |
|---|---|---|---|

## Overview

K60

The K60 digital AS-Interface compact modules are characterized by optimized handling characteristics and user-friendliness. They permit the mounting times and startup times of AS-Interface to be reduced by up to 40%.

### *Mounting and connection of the AS-Interface shaped cables*

Assembly of the K60 modules is performed with a mounting plate which accommodates the AS-Interface shaped cables. Two different mounting plates are offered for

- Wall mounting
- Standard rail mounting

The mounting plate and the compact module are joined together by means of a screw, with simultaneous contacting of the AS-Interface cable by the service-proven insulation piercing method.

### *Addressing and connection of the sensors/actuators*

Addressing of the K60 modules is performed using an addressing socket integrated in the compact module. The addresses can also be assigned after installation.

K60 modules with a maximum of four digital inputs and outputs

These compact modules contain the M12 standard connections for inputs and outputs. Using M12 standard plugs, a maximum of four sensors and four actuators can be connected to the compact module.

K60 compact modules with a maximum of eight digital inputs

These modules have eight digital inputs for connection through M12 plugs.

The module requires two AS-Interface addresses for processing all eight inputs. The addressing can thus be performed through a double addressing socket integrated in the module.

### *K60 data couplers*

An AS-Interface data coupler has been added to the K60 compact module range. Integrated in this module are two AS-i slaves which are connected to two different AS-i networks. Each of the two integrated slaves has four virtual inputs and four virtual outputs. The bidirectional data transmission of four data bits between two AS-i networks is thus possible in a simple and cost-effective manner. The data coupler needs its own address in each AS-i network. The data coupler is supplied with power directly from the AS-i cable.

Each AS-i network works with a different cycle time depending on the number of stations. Hence two AS-i networks are not necessarily synchronous. For this reason, the AS-i data coupler can be used to transmit only standard data and no safety data.

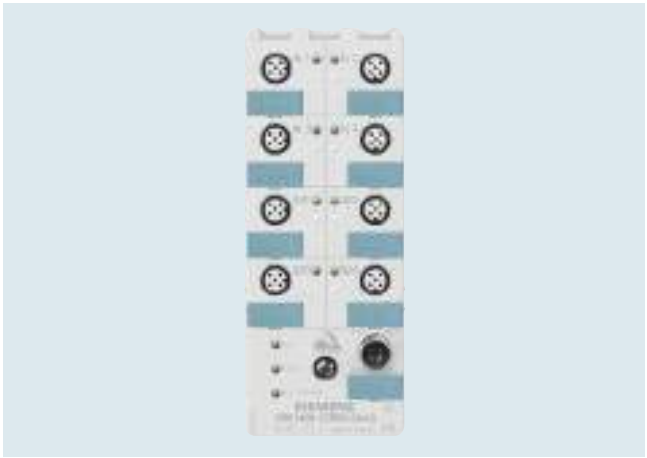
## Overview

### *Operation in particularly harsh environments*



K60R module in degree of protection IP68/IP69K

Modules with degree of protection IP67 cannot be used in areas exposed to permanently high levels of humidity, in applications with drilling emulsions and cutting oils or when cleaning with high-pressure cleaners. The answer for these applications is provided by the expansion of the K60 compact modules with the K60R module with degree of protection IP68/IP69K.

The K60R modules are connected instead of the AS-Interface flat cable using a round cable with M12 cable box.
The AS-Interface bus cable and the 24 V DC auxiliary power supply are routed in this case in a shared round cable.

Degree of protection IP68 permits many new applications that were impossible with the former field modules with degree of protection IP67. In applications such as filling plants or machine tools, the K60R with degree of protection IP68 enables the module to be used directly in zones exposed to permanent loading by humidity. It is thus possible to make even more rigorous savings in wiring with AS-Interface. For more information on IP68 test conditions, see "IP68/IP69K tests" on page 14/54.

Cleaning with high-pressure cleaners, such as is regularly performed in the food and drinks industry for instance, is possible without difficulty (IP69K).

In applications with tow chains, many users rely on placing the AS-Interface bus cable in a round cable. With the K60R module, a round cable connection is possible for direct connection to a round cable. No adapter is required.

### *Mounting*

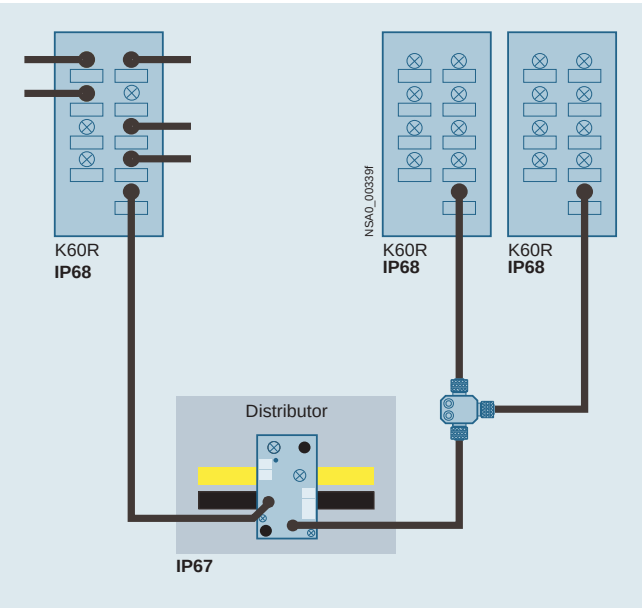
The same mounting plates are used as for the K60 modules. Instead of using flat cables, the K60R is connected using a 4-pole round cable with an M12 connection. With the K60R the mounting plate thus serves only as a fixture and ground terminal.

### *Addressing*

Addressing is performed using the same socket as for the bus connection. Connecting the module to the addressing unit takes place over a 3-pole standard M12 cable.

When the mounting is finished, the module is connected with the addressing cable to the addressing unit and addressed. The addressing cable is then removed and the module connected to the bus cable.

### *Connection*



K60R connection options

In the IP67 environment, the service-proven standard components are connected using flat cables. Spur lines are laid into the IP68 environment by means of an AS-Interface M12 feeder (3RK1901-2NR..). The module is connected with a round cable to an M12 cable box. For this purpose, the module has an M12 bus connection instead of the former addressing socket. The AS-Interface bus cable and the 24 V DC auxiliary voltage are routed together in a 4-pole round cable. There must be no ground conductor in this round cable. Connection to ground is made through the mounting plate.

In the IP68 environment, only cables with extruded M12 plugs may be used.

Please note the following conditions:

- The configuration guidelines for AS-Interface apply. For all M12 connecting cables, the maximum permissible current is limited to 4 A. The cross-section of these cables is just 0.34 $mm^2$. For connection of the K60R modules, the aforementioned M12 connecting cables can be used for the spur lines. The voltage drop caused by the ohmic resistance (approx. 0.11 Ω/m) must be taken into account.
- For round cable connections with shared AS-i and $U_{aux}$ in a single cable, the following maximum lengths apply:
  - Per spur line from feeder to module: max. 5 m
  - Total of all round cable segments in an AS-Interface network: max. 20 m

### *IP68/IP69K tests*

K60R modules were tested with the following tests:

- Stricter test than IP67: 90 min at 1.8 m depth of water (IP67: 30 min at 1 m depth of water)
- Salt water test: Five months in salt water, 20 cm deep, at room temperature
- Test with particularly creepable oil: Five months completely under oil at room temperature
- Test with drilling emulsion: Five months at room temperature (components of the drilling emulsion: Anionic and non-ionic emulsifiers, paraffinic low-aromatic mineral oil, boric acid alkanolamines, corrosion inhibitors, oil content 40%)
- Test in oil bath (Excellence 416 oil) with alternating oil bath temperature: 130 cycles of 15 to 55 °C, two months
- Cleaning with a high-pressure cleaner according to IP69K: 80 to 100 bar, 10 to 15 cm distance, time per side > 30 s, water temperature 80 °C

To simulate requirements as realistically as possible, the modules were artificially aged prior to the tests by 15 temperature cycles of -25/+85 °C. During the test, the modules were connected to 3RX1 connecting cables. Unassigned connections were closed with 3RK1901-1KA00 sealing caps.

Note:

Sealing caps and M12 connections must be tightened with the correct torque.

## Overview

Compact modules K45

The K45 series of compact modules supplements the large K60 compact modules which have a proven track record in industry. They are the logical consequence for rounding off the bottom end of the existing product range.

The acclaimed advantages of the existing K60 compact modules are fully emulated by the K45 modules. The K45 modules have a substantially smaller basic area and installation depth, however.

Yet in spite of these small dimensions all the modules have large labels and an integrated addressing socket.

Two mounting plates are offered for the K45 compact modules:

- Mounting plate for wall mounting
  This has a hole pattern that is identical to that of the K60 compact modules. This means that K60 compact modules can be mounted together with K45 modules in an aligned arrangement. The shaped cables can be inserted in the recesses of the mounting plates where they cause no hindrance.
- Mounting plate for standard rail mounting

### *Connection of the AS-Interface shaped cables*

The mounting plate and the compact module are joined together by means of a screw, with simultaneous contacting of the AS-Interface cable by the service-proven insulation piercing method.

Now, mounting the AS-Interface shaped cables is in fact easier than ever. The yellow and black AS-Interface shaped cable can be inserted into the mounting plates from the left or right regardless of the position of the coding lug. The correct polarity of the applied voltages is thus guaranteed.

### *Addressing and connection of the sensors/actuators*

Addressing of the K45 compact modules is performed using an addressing socket integrated in the module. The addresses can be assigned even when mounted.

K45 modules with a maximum of four digital inputs and outputs

These compact modules contain up to four M12 standard connections or M8 standard connections for inputs and outputs. Using M12 or M8 standard connectors, a maximum of four sensors and four actuators can be connected to the compact module. Depending on the module, the sockets can be assigned in duplicate.
Pin assignment: Y – i.e. via a socket, two sensors or one sensor/one actuator are connected.

K45 modules with a maximum of eight digital inputs

These modules have eight digital inputs for connection through M12 plugs. The sockets have duplicate assignments.
Pin assignment: Y – i.e. via a socket, two sensors or one sensor/one actuator are connected.

The module requires two AS-Interface addresses for processing all eight inputs. The addresses can be assigned through a double addressing socket integrated in the module.

## Overview

Digital I/O modules, IP67 – K20

The K20 compact module series rounds off the AS-Interface compact modules with a particularly slim design and only 20-mm width. Thanks to its extremely compact dimensions, these modules are particularly suited for handling machine applications in the field of production engineering where modules need to be arranged in the smallest of spaces.

Robotics is yet another application area. The K20 modules are connected to the AS-Interface with a round cable with M12 cable box instead of with the AS-Interface flat cable. The AS-Interface bus cable and the 24 V DC auxiliary energy are routed in this case in a shared round cable. This enables extremely compact installation.

The flexibility of the round cable means that it can also be used on moving machine parts without any problems. The K20 modules are also ideal for such applications as their non-encapsulated design makes them particularly light in weight.

In applications with tow chains, many users rely on placing the AS-Interface bus cable in a round cable. In this case, the K20 modules support direct connection to the round cable. No flat to round cable adapter is required.

The K20 compact module range includes standard AS-Interface modules, as well as an ASIsafe version for the connection of safety-related sensors, such as EMERGENCY STOP pushbuttons or protective door monitoring.

For particularly space-saving dimensions, the sensors and actuators are connected over M8 plug-in connectors. Alternatively, M12 connectors with Y-assignment can be used.

## Overview

K60 analog compact module

**More information**

For the Manual “AS-Interface Analog Modules Profile 7.3/Profile 7.A.9”, see https://support.industry.siemens.com/cs/ww/en/view/7643815

AS-Interface analog modules from the K60 compact series detect or issue analog signals locally. These modules are linked to the higher-level controller through an AS-Interface master according to specification V2.1 or specification V3.0.

The analog modules are divided into the following groups:

- Input modules for
  - Sensors with current sensor
  - Sensors with voltage signal
  - Sensors with thermal resistor
- Output modules for
  - Current actuators
  - Voltage actuators

The input modules according to profile 7.3/7.4 are available with two or four input channels. It is possible in addition to convert the two-channel module to using only one input channel, thus enabling very short times before the analog value is available. The conversion is effected by means of a jumper plug at socket 3. The transmission times achieved with analog modules according to Profile 7.A.9 are twice as fast as those achieved with profile 7.3/7.4. Operation is adjustable in this case, e.g. it is possible to choose with the ID1 code whether the module is operated with one or two channels.

The output modules are configured as two-channel modules as standard.

The input and output channels are electrically separated from the AS-Interface network. If sensors with a higher power requirement are to be connected, more power can be supplied through the auxiliary voltage as an alternative to the internal supply.

In the manual "AS-Interface Analog Modules Profile 7.3/Profile 7.A.9", the modules are presented in great detail along with their technical specifications and in-depth notes on operation. Sample function blocks round off the manual, see "More information" above.

## Benefits

- Analog modules are just as easy to integrate in AS-Interface as digital modules
- Analog values can be easily detected and issued locally
- Preprocessing of the analog value transfer in the master enables rapid evaluation of the analog values
- Up to four values can be detected using one analog module
- Faster transmission and conversion of analog values thanks to the new option for switching to single-channel operation

In addition, specification V3.0 now also offers:

- A/B technology, now also with analog modules
- On average, double fast transmission times (only 3 or 4 cycles, depending on the resolution selected)
- Variable adjustable mode: 12-bit or 14-bit resolution, single-channel or two-channel, selectable via the ID1 code

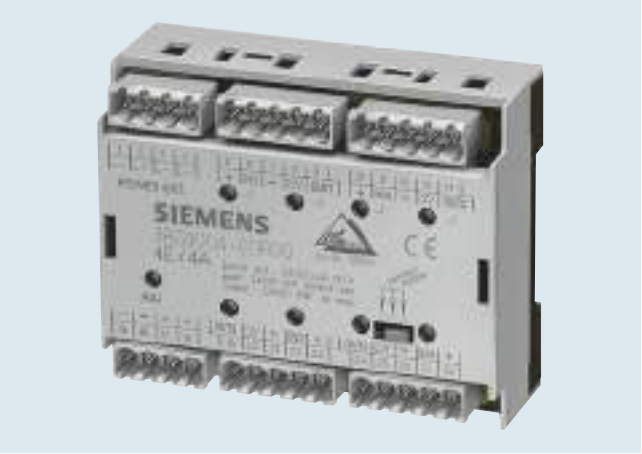
## Overview

SC17.5F, SC17.5 and SC22.5 SlimLine Compact modules



F90 module

Flat module

For AS-Interface applications inside control cabinets, there are various module series for the most diverse requirements:

- SlimLine Compact – particularly slim design ideal for space-saving use in the control cabinet
- F90 module – particularly flat design for flat control boxes
- Flat module – special design for integration into customer-specific solutions

The existing SlimLine series of modules S22.5 and S45 are being replaced by the innovative new devices in the SlimLine Compact SC17.5, SC17.5F and SC22.5 series. The previous SlimLine modules are still available as replacements for existing systems.

### *Available versions*

The following table provides an overview of the key features of the different series of control cabinet modules.

| Feature | SlimLine Compact | F90 module | Flat module |

## Overview

***SlimLine Compact modules***

SC17.5 and SC22.5 SlimLine Compact modules with screw terminals

SlimLine Compact module SC22.5 with connector with screw terminals

The AS-Interface module series for the control cabinet SlimLine Compact with degree of protection IP20 creates space in the cabinet and in distributed local control boxes. A width of just 17.5 mm or 22.5 mm ensures considerable space savings in the control cabinet.

The SlimLine Compact module series comprises not only digital and analog I/O modules but also ASIsafe modules with safe inputs. Digital outputs are available as solid-state and relay outputs.

Sensors and actuators, as well as the AS-Interface bus cable, are connected by means of removable screw or push-in spring-loaded terminals. Device connectors available as accessories offer the possibility of looping through the AS-Interface bus cable and the 24 V DC power supply $U_{aux}$ from one module to additional modules. This significantly simplifies the wiring, as the AS-Interface bus cable and $U_{aux}$ only have to be connected to one device.

All devices for the connection of 3-wire sensors offer the option of supplying the sensors either from the AS-Interface bus cable or alternatively from the 24 V DC voltage supply $U_{aux}$ depending on the requirements of the particular application. A slide switch is used to make the selection. If supply via $U_{aux}$ is selected, the wiring of the sensor terminals remains unchanged. This means that no external supply is required for the sensors.

All modules have LEDs on the front that provide diagnostics information and indicate the status of the module inputs and outputs. Devices with semiconductor outputs indicate the status of each output by means of a dual LED. Thus the status (on/off/overload) is displayed for each output. An addressing socket integrated at the front enables the module to be addressed also when it is installed. Integrated adapters permit mounting onto a standard mounting rail – either directly for the module or for the device connector. Alternatively, the modules can also be screw-mounted using push-in lugs (accessories). These lugs for screw fastening must be ordered separately.

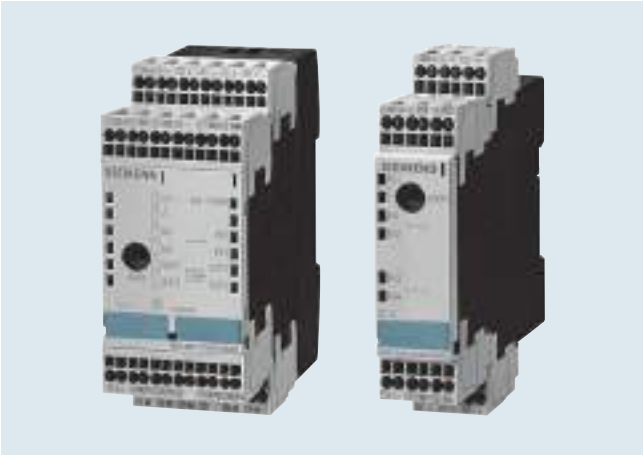
## More information



SlimLine modules S45 (picture on left) and S22.5 module (picture on right) with spring-loaded terminals

The existing SlimLine series of I/O modules for use in the control cabinet is being replaced by the new, innovative SlimLine Compact series. We recommend that these new devices are used in future.

The Cross reference table indicates the best options for replacing the existing SlimLine devices with SlimLine Compact devices.

Note:

The previous SlimLine devices are still available for use as replacements in existing systems. As a result of the innovation, the new SlimLine Compact devices are not fully compatible in terms of either mechanical dimensions or electrical properties.

The Cross reference table below links the existing S22.5, S22.5F and S45 SlimLine modules with the new SC17.5, SC17.5F and SC22.5 SlimLine Compact devices.

## Overview

Flat module 4I/4O

The flat module for the control cabinet in degree of protection IP20 has four inputs and four outputs.

The module is fitted at the front with an LED which indicates the module's status.

With the integrated lugs, the modules can be screwed on.

An integrated addressing socket enables the module to be addressed when it is installed.

Standard sensors/actuators and the AS-Interface cable can be connected using screw terminals.

## Overview

Counter module with spring-loaded terminals

The counter module is used to send hexadecimally coded count values (LSB=D0, MSB=D3) to a higher-level controller. The count value is increased by 1 for each valid count pulse at terminal 8. Beginning at 0, the module counts up to 15 and then begins again at 0. The controller adopts the current value and determines the number of pulses between two host invocations through subtraction from the previous value. The total number of count pulses is determined by adding these differences.

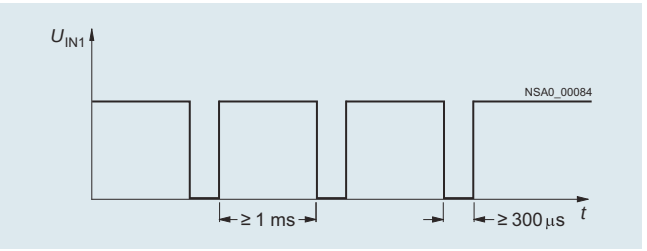
For the values sent to be unambiguous, no more than 15 count values are allowed between two host invocations or AS-Interface master invocations at terminal 8. The maximum permissible transmission frequency is calculated from these times:

$f_{TRmax} = 15 / T_{max}$

$T_{max}$: max. possible transmission time from the slave to the host

A further condition for the maximum frequency is the required pulse shape. For the counter to accept a pulse as valid, a Low must have been applied at the input for at least 300 µs and a High for at least 1 ms.

This results in a maximum frequency of $f_{Zmax}$ = 1 / 1.3 ms = 769 Hz independently of the control system (see figure below).



Maximum frequency for the counter module

If the time criterion stipulated in the figure is violated, the count value is rejected.

The counter is active only for the reset parameter P2 (default). The counter is deleted when P2 is set, and the incoming count pulses are not registered until after P2 is reset again.

Note:

A customized function block is necessary or must be programmed.

## Overview

Ground-fault detection module with spring-loaded terminals

*"Ground faults in any control circuit must not lead to unintentional starting or potentially hazardous movements or prevent the machine from stopping." (IEC 60204-1 / VDE 0113-1).*

The AS-Interface ground-fault detection module is used to meet these requirements. Using this module from the SlimLine series, ground faults in AS-Interface systems can be reliably detected and reported.

The following ground faults are detected:

- Ground fault from AS-i "+" to ground
- Ground fault from AS-i "-" to ground
- Ground fault on sensors and actuators that are supplied from the AS-Interface voltage

Note:

Not suitable for AS-i Power24V.

Check whether the AS-i power supply unit or the AS-i master module, etc. features integrated ground-fault detection, and therefore whether a separate ground fault detection module can be omitted.

It should be noted that an AS-i cable segment behind an AS-i repeater requires its own ground-fault monitoring.

## Overview

AS-Interface overvoltage protection module

The AS-Interface overvoltage protection module (protection module) protects downstream AS-Interface devices or individual sections in AS-i networks from conducted overvoltages which can be caused by switching operations and remote lightning strikes. The location of the protection module forms the transition from zone 1 to 2/3 within the lightning protection zone concept. Direct lightning strikes must be coped with using additional protective measures at the transitions from lightning protection zone 0A to 1.

With the AS-Interface overvoltage protection module, it is now also possible to integrate AS-Interface in the overall overvoltage protection concept of a plant or machine.

The module has the same design and degree of protection (IP67) as the AS-Interface K45 compact modules. It is a passive module and as such does not need its own address on the AS-Interface network. The module can be used to protect the AS-Interface cable and the cable for the auxiliary voltage from overvoltage. Overvoltages are discharged through a ground cable with a green/yellow oil-proof outer sheath. This cable is fixed in the module and must be connected with low resistance to the system's ground.

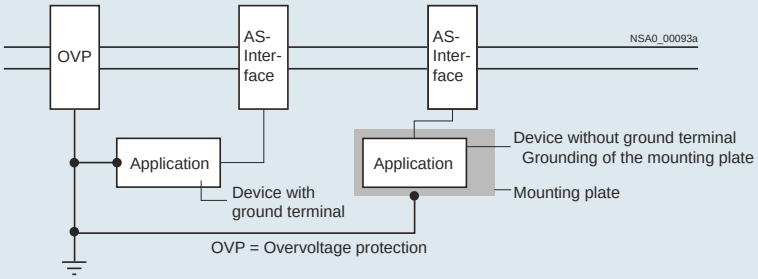
### *Rated discharge current $I_{sn}$*

The rated discharge current is the peak value of a surge current of the form 8/20 µs (microseconds), for which the protection module is designed in accordance with a specified test program. With an 8/20 waveform, 100% of the value is achieved after 8 µs and 50% after 20 µs.

### *Protection level $U_p$*

The protection level of a protection module is the highest momentary value of the voltage at the terminals, established in individual tests and characterizes the capability of a protection module to limit overvoltages to a residual level.

### *Configuration guidelines*



The grounding of protection modules and the units to be protected must be effected through a shared grounding point.

If insulated devices are protected, their mounts must be included in the grounding points.

### *Sample application*

## Overview

AS-Interface power supply unit for 3 A

**More information**

Operating instructions for AS-i power supply units, see https://support.industry.siemens.com/cs/ww/en/view/21489904 and https://support.industry.siemens.com/cs/ww/en/view/22317836

AS-Interface power supply units feed 30 V DC into the AS-Interface cable and supply the AS-Interface components. They include power-optimized data decoupling for the separation of communication signals and supply voltage. As the result, AS-Interface is able to convey both data and power along a single line. The power supply units are resistant to overload and short circuits.

### *Dimensions*

AS-Interface power supply units have compact dimensions in widths of 50/70/120 mm. No distances from other devices need to be observed when mounting the power supply units.

### *Features*

- Higher rating: The power supply units deliver currents of 2.6 to 8 A.
- Integrated data decoupling: As the result, AS-Interface is able to convey both data and power along a single line.
- Integrated ground-fault detection: The power supply units perform the reliable detection and signaling of ground faults according to IEC 60204-1. The AS-Interface voltage can be disconnected automatically in the event of a ground fault.
- Integrated overload detection: An output overload is detected and reported over a diagnostics LED.
- Diagnostics memory: Any ground faults or overloads on the output side are stored in a diagnostics memory until the device is RESET.
- Remote RESET and remote signaling: Using relay contacts, a ground fault can be signaled and evaluated by a central controller and/or indicator light.
- Diagnostics LEDs: Three different LEDs indicate the status of the AS-Interface power supply locally at the power supply unit.
- Ultra-wide input range/two-phase connection: The ultra-wide input range of 120 to 500 V of the 8 A version means that the supply units can be used in virtually any network worldwide. In addition, this version dispenses with the need for an N conductor as the device can be connected directly between 2 phases of a network.
- Operation with 24 V DC: The 3 A power supply unit is also available as a version with a 24 V DC input. This power supply unit is suitable for use in battery-powered systems or in systems with UPS (uninterruptible power supply).
- Removable terminal blocks with spring-loaded terminals: For easy exchanging of devices, each power supply unit has three removable terminal blocks: for the input side, for the output side and for Signal/RESET connections.

## Benefits

- Complete solution for supplying AS-Interface networks while making full use of the maximum possible cable length per AS-i segment
- Only AS-i masters and AS-i slaves need to be connected to the AS-Interface cable in order to operate AS-Interface
- Compact, space-saving dimensions
- Reliable power supply even for large numbers of AS-Interface modules with a high power requirement
- Integrated ground-fault and overload detection saves the need for additional components and enhances safety
- Fast fault detection and reduced downtimes thanks to diagnostics memory, remote signaling and remote RESET
- Reduced downtimes as the result of removable terminal blocks which enable the fast exchanging of devices
- Ultra-wide input range of the 8 A version permits single-phase and two-phase operation and removes the need for an N conductor
- Can be used world-wide thanks to, for example, UL/CSA approval (UL 508)
- With the 2.6 A version, the output power is restricted to max. 100 W for use in Class 2 circuits in accordance with NEC (National Electrical Code)

# AS-Interface: Power Supply Units and Data Decoupling Modules

## 30 V power supply units

### Overview

PSN130S 30 V power supply units for 3 A, 4 A and 8 A

**More information**

For operating instructions and other technical information, see https://support.industry.siemens.com/cs/ww/en/view/64364000 and https://support.industry.siemens.com/cs/ww/en/view/44030789

The PSN130S 30 V power supplies feed 30 V DC into the AS-Interface cable and supply the AS-Interface components, but do not include data decoupling. Data decoupling modules are needed in addition therefore to separate communication signals and control supply voltage, see page 14/77 or 14/79.

The power supply units are resistant to overload and short circuits.

#### *Dimensions*

The 30 V power supply units have compact dimensions with widths of 50 and 70 mm. No distances from other devices need to be observed when mounting the power supply units.

#### *Features*

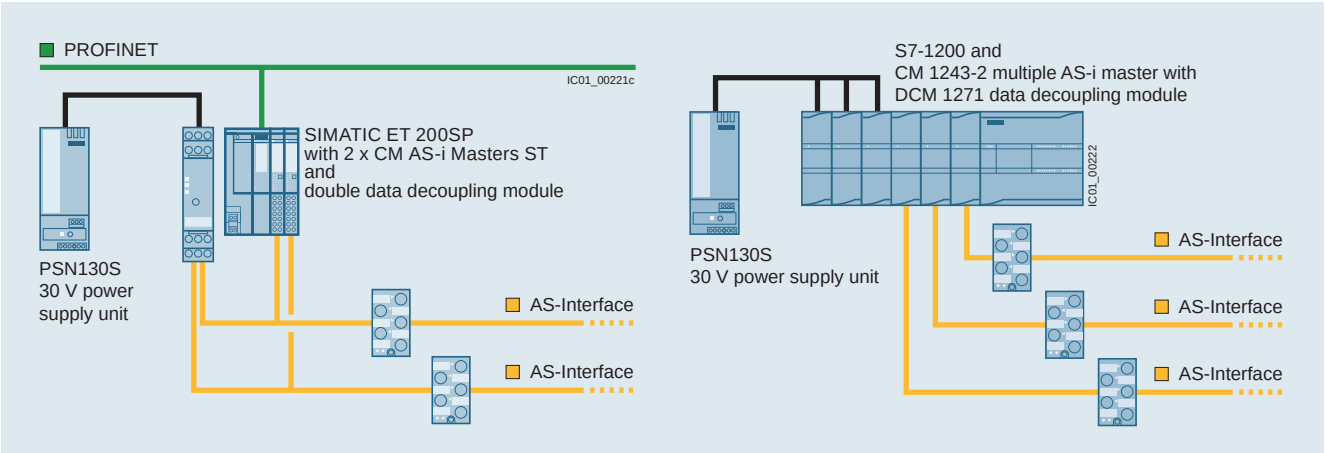
- Primary clocked power supply units for connection to a single-phase AC network
- Power for currents of 3 A, 4 A and 8 A
- The output voltage is floating, and resistant to short-circuits and no-load operation. If there is an overload, the output voltage is reduced or cut-off. After a short-circuit or overload, the devices start up again automatically.
- In the event of a device fault, the output voltage will be limited to max. 37 V.
- Modular installation devices in degree of protection IP20 and safety class I
- Diagnostics: With an output voltage > 26.5 V DC, the green LED (30V O.K.) is lit and the signaling contact 13-14 is closed.

### Benefits

- Low-cost alternative solution for supplying AS-Interface networks while making full use of the maximum possible cable length per AS-i segment
- Cost advantage particularly for multiple networks
- Compact, space-saving dimensions
- Reliable power supply even for large numbers of AS-Interface modules with a high power requirement
- Can be used world-wide thanks to, for example, UL/CSA approval (UL 508)

### Application

#### *Configuration examples of AS-Interface networks with a 30 V power supply unit*



Configuration of AS-Interface multiple networks with one PSN130S 30 V power supply unit (examples with schematic representation):
Left: Double network based on the S22.5 double data decoupling module and a SIMATIC ET 200SP with two CM AS-i Master ST modules
Right: Triple network based on the SIMATIC S7-1200 with DCM 1271 data decoupling modules and CM 1243-2 communication processors

## Technical specifications

## Overview

AS-Interface S22.5 double data decoupling module:
Screw terminal version (picture left),
Spring-loaded terminal version (picture right)

**More information**

Operating instructions, see https://support.industry.siemens.com/cs/ww/en/view/44030789
More information on AS-i Power24V, see System Manual "AS-Interface", https://support.industry.siemens.com/cs/ww/en/view/26250840

With the aid of the S22.5 data decoupling module, the AS-Interface network can also be supplied with 24 V DC or 30 V DC from a standard power supply unit and the transmission of data and power can be realized along one cable.

The combination of data decoupling modules and standard power supply units is therefore a cost-efficient alternative to the service-proven AS-Interface power supply units.

The quality of the data signals and the reliable operation of the AS-i network are not negatively affected as the result.

### *Features of the S22.5 data decoupling unit*

- Degree of protection IP20
- Narrow design: 22.5 mm wide
- Version with screw or spring-loaded terminals
- Versions for single and double data decoupling
- Supply of several AS-i networks with a single power supply unit
- Operation with 24 V DC or 30 V DC, grounded or non-grounded
- Adjustable current limiting up to 2 x 4 A
- Integrated ground-fault detection with fault storage, display can optionally be switched off
- Diagnostics LEDs and signaling contacts
- RESET by button or remote RESET

### *Ground-fault detection*

The integrated ground-fault detection works with a grounded and non-grounded supply: The connection of negative pole and ground (upstream from the data decoupling module) customary with 24 V DC power supplies is permitted. A ground fault to the negative or positive pole on the AS-Interface network (downstream from the data decoupling module) is detected and stored as a fault and will be signaled using LEDs and a relay contact.

Using the ground-fault detection in the AS-i master is recommended for non-grounded supply. In this case, the ground-fault indicator can be deactivated in the data decoupling unit to avoid any unwanted LED messages.

## Benefits

- Compatible expansion of the AS-Interface system
- An existing standard power supply unit with 24 V DC or 30 V DC can be used for supplying AS-i networks
- The AS-Interface system can also be used in tightly budgeted applications because no AS-Interface power supply unit needs to be purchased
- Applications benefit in addition from the advantages of a modern bus system:
  - High level of standardization
  - Additional diagnostics and maintenance information
  - Faster commissioning
- Easy and cost-efficient design of single and multiple networks is possible

## Application

The AS-Interface data decoupling module is designed for AS-Interface networks with 30 V or 24 V supply (AS-i Power24V).

Operation of an AS-i network with the data decoupling module and a 30 V standard power supply unit is technically equivalent to the use of an AS-Interface power supply unit and offers the service-proven features of AS-Interface for all applications.

AS-Interface Power24V uses a 24 V power supply unit in conjunction with a data decoupling module and is particularly suitable for:

- Compact machines using AS-Interface input/output modules
- Applications in the control cabinet for AS-Interface integration of SIRIUS 3RT2 contactors using 3RA27 function modules

When using the double data decoupling module or other data decoupling units, several AS-Interface networks can be operated with a single power supply unit. This results in an additional cost advantage.

Note:

The power supply units must comply with the PELV (Protective Extra Low Voltage) or SELV (Safety Extra Low Voltage) standards, have a residual ripple of < 250 $mV_{pp}$, and in the event of a fault must limit the output voltage to a maximum of 40 V.

We recommend

- SITOP power supplies, see Catalog KT10.1 https://support.industry.siemens.com/cs/ww/en/view/109745655
- PSN130S 30 V power supply units, see page 14/75

Note on AS-i Power24V:

The length of an AS-i Power24V network is restricted to 50 m in order to limit the voltage drop along the cable.

AS-i masters, AS-i slaves and the sensors and actuators supplied through the AS-i cable must be designed for the reduced voltage. Sensors and actuators for the standard voltage range of 10 to 30 V can be supplied with sufficient voltage.

Please also observe the requirements specified in "Extension of AS-i Power24V" for implementation of AS-i Power24V, see page 14/21.

For more information on AS-i Power24V, see "AS-Interface System Manual", https://support.industry.siemens.com/cs/ww/en/view/26250840.

## Overview

DCM 1271 data decoupling module for SIMATIC S7-1200

**More information**

Equipment Manual AS-i Master CM 1243-2 and AS-i Data Decoupling Unit DCM 1271 for SIMATIC S7-1200, see https://support.industry.siemens.com/cs/ww/en/view/44030789

More information on AS-i Power24V, see System Manual "AS-Interface", https://support.industry.siemens.com/cs/ww/en/view/26250840

With the aid of the DCM 1271 data decoupling module, the AS-Interface network can also be supplied with 24 V DC or 30 V DC from a standard power supply unit and the transmission of data and power can be realized along one cable.

The DCM 1271 data decoupling module has the same enclosure design as the S7-1200 module and is therefore ideal for combining with the CM 1243-2 AS-i master.

The DCM 1271 data decoupling module has no connection to the backplane bus of the SIMATIC S7-1200 and is not counted as a communication module when calculating the maximum configuration.

***Features of the DCM 1271 data decoupling module***

- Design: S7-1200, 30 mm wide, degree of protection IP20
- Detachable terminals (scope of supply)
- Single data decoupling
- Supply of several AS-i networks with a single power supply unit
- Operation with 24 V DC or 30 V DC, grounded or non-grounded
- Current limiting at 4 A
- Integrated ground-fault detection
- Diagnostics LEDs for ground faults and overloads
- Signaling contacts for ground-fault detection

***Ground-fault detection***

The integrated ground-fault detection works with a grounded and non-grounded supply: The connection of negative pole and ground (upstream from the data decoupling module) customary with 24 V DC power supplies is permitted. A ground fault to the negative or positive pole on the AS-Interface network (downstream of the data decoupling module) is identified and signaled via LED and a transistor output.

## Benefits

- An existing standard power supply unit with 24 V DC or 30 V DC can be used for supplying AS-i networks
- The AS-Interface system can also be used in tightly budgeted applications because no AS-Interface power supply unit needs to be purchased
- Applications benefit in addition from the advantages of a modern bus system:
  - High level of standardization
  - Additional diagnostics and maintenance information
  - Faster commissioning

## Application

The AS-Interface data decoupling module is designed for AS-Interface networks with 30 V or 24 V supply (AS-i Power24V).

Operation of an AS-i network with the data decoupling module and a 30 V standard power supply unit is technically equivalent to the use of an AS-Interface power supply unit and offers the service-proven features of AS-Interface for all applications.

AS-i Power24V uses a 24 V power supply unit in conjunction with a data decoupling module and is particularly suitable for

- Compact machines using AS-Interface input/output modules
- Applications in the control cabinet for AS-Interface integration of SIRIUS 3RT2 contactors using 3RA27 function modules

Note:

The power supply units must comply with the PELV (Protective Extra Low Voltage) or SELV (Safety Extra Low Voltage) standards, have a residual ripple of < 250 $mV_{pp}$, and in the event of a fault must limit the output voltage to a maximum of 40 V.

We recommend

- SITOP power supplies, see Catalog KT10.1 https://support.industry.siemens.com/cs/ww/en/view/109745655
- PSN130S 30 V power supply units, see page 14/75

Note on AS-i Power24V:

The length of an AS-i Power24V network is restricted to 50 m in order to limit the voltage drop along the cable.

AS-i masters, AS-i slaves and the sensors and actuators supplied through the AS-i cable must be designed for the reduced voltage. Sensors and actuators for the standard voltage range of 10 to 30 V can be supplied with sufficient voltage.

Please also observe the requirements specified in "AS-i Power24V" for the operation of AS-i Power24V, see page 14/21.

For more information on AS-i Power24V, see "AS-Interface System Manual", https://support.industry.siemens.com/cs/ww/en/view/26250840.

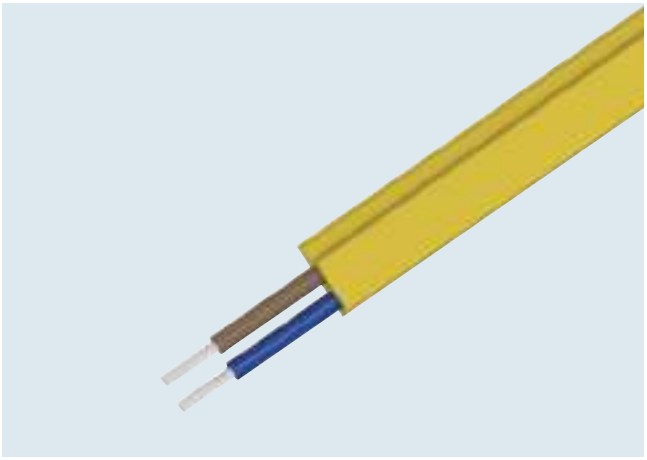
## Overview



AS-Interface shaped cable

The actuator-sensor interface – the networking system used for the lowest field area – is characterized by very easy mounting and installation. A new connection method was developed specially for AS-Interface.

The stations are connected using the AS-Interface cable. This two-wire AS-Interface shaped cable has a trapezoidal shape, thus ruling out polarity reversal.

Connection is effected by the insulation piercing method. In other words, male contacts pierce the shaped AS-Interface cable and make reliable contact with the two wires. Cutting to length and stripping are superfluous. Consequently, AS-Interface stations (e.g. I/O modules, intelligent devices) can be connected in the shortest possible time and exchanging devices is quick.

To enable use in the most varied ambient conditions (e.g. in an oily environment), the AS-Interface cable is available in different materials (rubber, TPE, PUR).

For special applications it is also possible to use an unshielded standard round cable H05VV-F 2 x 1.5 $mm^2$ according to AS-i specification. With AS-Interface, data and energy for the sensors (e.g. proximity switches) and actuators (e.g. indicator lights) are transmitted over the yellow AS-Interface cable.

The black AS-Interface cable must be used for actuators with a 24 V DC supply (e.g. solenoid valves) and a high power requirement.

### *Suitable for operation in tow chains*

The use of the AS-Interface shaped cables with TPE and PUR outer sheath was checked in a tow chain test with the following conditions:

| | | |
|---|---|---|
| Chain length | m | 6 |
| Travel | m | 10 |
| Bending radius | mm | 75 |
| Travel speed | m/s | 4 |
| Acceleration | $m/s^2$ | 4 |
| Number of cycles | | 10 million |
| Duration of test | | approx. 3 years (11 000 cycles per day) |

After termination of the 10 million cycles only slight wear was visible due to the lugs of the tow chain. No damage to the cores and core insulation could be detected.

Note:

When using a tow chain, the cables must be installed in such a way that they are not subject to tensile forces. On no account may the cables be twisted, but they must be routed flat through the tow chain.

## Overview

AS-Interface repeater

The AS-Interface repeater is used to extend the AS-Interface cable.

- In its basic version, an AS-i network comprises one segment with a maximum cable length of 100 m. An extension plug (see page 14/84) can be used to increase the cable length for a segment to a maximum of 200 m.
- If this is insufficient, however, you can use one or more repeaters
- A repeater adds an extra segment to an existing segment. The extra segment can have a cable length of up to 100 m (without extension plug) or up to 200 m (with an extension plug in the extra segment)
- Each segment requires a separate AS-i power supply unit
- Electrical separation of the two AS-Interface shaped cable lines
- Slaves can be used on both sides of the repeater
- The additional power supply can increase the current infeed for slaves/sensors and lower the voltage drop on the AS-i cable
- Separate display of the correct AS-Interface voltage for each segment
- Installed in K45 module enclosure IP67 with mounting plate
- Easy mounting

## Benefits

- More possibilities of use and greater freedom for plant planning through extension of the AS-Interface network
- Reduced downtime and servicing times in the event of a fault thanks to separate display of the correct AS-Interface voltage for each side

***Design of an AS-Interface network with repeaters***

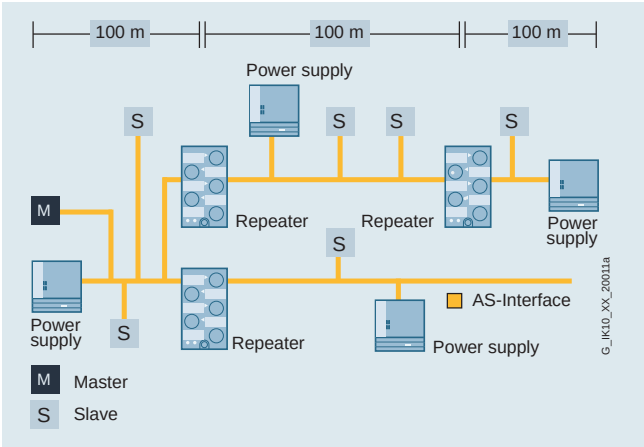
- Parallel switching of several repeaters possible (star configuration)
- Combination of series and parallel switching possible

The following conditions apply:

- When used without an extension plug no more than two repeaters are permitted between AS-i master and slave (repeaters connected in series)
- When used with an extension plug no more than one repeater is permitted between AS-i master and slave

In safety-related applications the following also applies:

- When used without an extension plug, no more than two repeaters are permitted between evaluation unit (e.g. MSS ASIsafe Modular Safety System, F-CM AS-i Safety ST for ET 200SP) and ASIsafe input slave or safe output module.
- When used with an extension plug, no more than one repeater is permitted between the evaluation unit (e.g. MSS ASIsafe Modular Safety System, F-CM AS-i Safety ST for ET 200SP) and ASIsafe input slave or safe output module.



Design of an example AS-Interface network with repeaters (without extension plug)

Note:

The AS-Interface repeater is not suitable for AS-i Power24V networks. It is recommended for use in AS-Interface networks with AS-Interface power supply units (e.g. 3RX9501-0BA00).

## Application

The repeater is used to extend the AS-Interface network. In this case there are AS-Interface slaves and one AS-Interface power supply unit on each side of the repeater.

In the case of a line topology with two repeaters and three extension plugs, the maximum possible size of the AS-Interface network is 600 m, see example configuration with extension plug on page 14/84.

## Selection and ordering data

|---|---|---|---|---|---|
| 6GK1210-0SA01 | **Repeaters for AS-Interface**<br>For cable extension,<br>scope of supply includes mounting plate (for wall and standard rail mounting),<br>module does not require an AS-i address | 5 | **6GK1210-0SA01** | 1 | 1 unit |

## Overview

AS-Interface extension plug compact

With the extension plug it is possible to double the cable length possible in an AS-Interface segment from 100 to 200 m.

Only one power supply unit is needed to supply power to the slaves on the up to 200 m long segment.

The extension plug compact can be installed directly onto an AS-i shaped cable. A separate M12 feeder, as was required for earlier extension plug versions, is no longer required with extension plug compact.

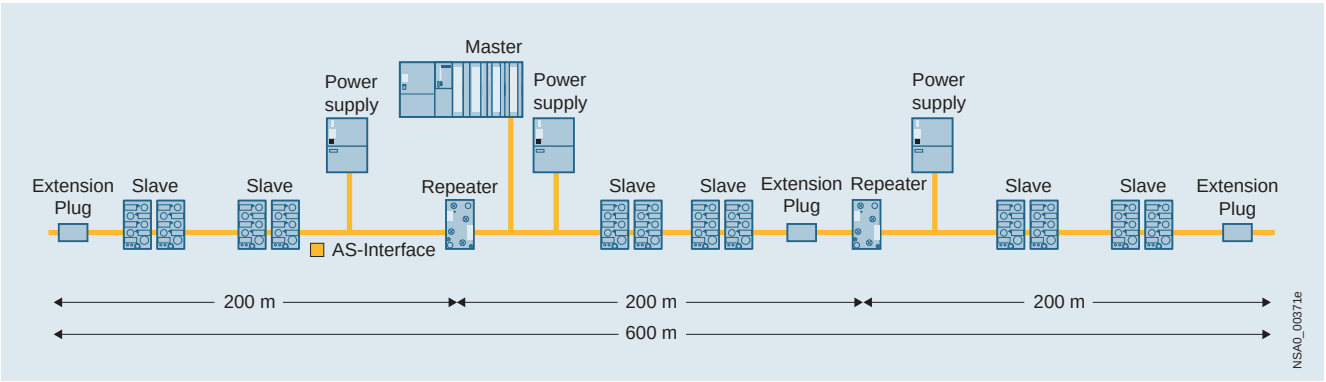
***Design of an AS-Interface segment with an extension plug***

To construct an AS-Interface segment with a cable length of more than 100 m and up to a maximum of 200 m, the extension plug is installed in a radius of around ± 10 m at the point of the network that is furthest from the power supply unit. The extension plug is not allowed to be used in AS-Interface networks smaller than 100 m. As with all AS-Interface networks, any network structure (line, tree, star) is possible when using the extension plug. Only one extension plug is required per 200 m segment even with a tree or star structure.

Note:

The AS-i bus cable must not terminate in the extension plug compact. The AS-Interface shaped cable can be terminated by means of a cable terminating piece to provide degree of protection IP67 where required, see "Miscellaneous accessories" on page 14/91.

The AS-Interface extension plug is not suitable for AS-i Power24V networks.



Maximum network size with repeaters and extension plug (master at center of network)

## Overview

The innovated addressing unit for AS-Interface of the AS-i specification V3.0

The addressing unit is used to assign an address during commissioning to each AS-Interface slave. The device detects a connected slave module or a complete AS-i network and displays the found module in the LCD display. Each address can be individually set using the Up/Down keys. By turning the rotary switch, further commissioning functions are selected intuitively. The innovative device has been adapted to the current AS-i specification V3.0 and can now also handle the I/O data of the latest slaves.

### *Functionality*

- Reading out and adjusting the slave address 0 to 31 or 1A to 31A, 1B to 31B, with automatic addressing aid and prevention of double addresses
- Reading out the slave profile (IO, ID, ID2)
- Reading out and adjusting the ID1 code
- Input/output test when commissioning the slaves: Read input signals and write outputs with all digital and analog slaves according to AS-Interface specification V3.0, including safe input slaves and complex CTT2 slaves
- Measuring the voltage on the AS-Interface cable (measuring range from 2 to 35 V)
- Display of the operational current in case of direct connection of an AS-i slave (measuring range from 0 to 150 mA)
- Storage of complete network configurations (profiles of all slaves) to simplify the addressing
- Adjusting the slave parameters for commissioning
- Reading out the identification and diagnostics of CTT2 slaves
- Reading out the code table of safe input slaves (ASIsafe)

Note:

For operation of the addressing unit on an AS-Interface cable with connected power supply unit, the following applies: The AS-Interface addressing unit is suitable for standard AS-i networks and AS-i Power24V networks (min. operational voltage on the AS-Interface cable 19 V).

## Benefits

- Increased power supply to the slaves to 150 mA
- Better utilization of the battery capacity thanks to improved circuitry
- Support for the current AS-i specification V3.0
- Expanded display for simultaneously displaying input and output states
- Clearly recognizable display of status of digital inputs/outputs in binary format (0/1), optionally also available as hexadecimal values
- Intuitive display of analog data either as decimal, hexadecimal or as a percentage (e.g. 100% corresponds to input/output value 20 mA)
- I/O data of complex slaves (CTT2 profile) can be displayed
- Decoded display of the input data of safe input slaves, including code table
- Simplification of the operating steps when setting the slave address with automatic read back of the set address
- Addressing cable, ready for operation even without screwing in tight into the M12 socket, thus faster availability of the addressing unit
- Proven compact housing with smooth keys and rotary switch
- Connection of standard AS-i networks possible with 30 V as well as Power24V networks
- Complex slaves with high operating currents can be addressed without external supply
- Longer operating time by automatic shutdown after approx. 5 minutes (or approx. 1 minute when data exchange is active) after last operation
- Can be used with all types of digital and analog slaves
- Comprehensive and fast input/output test of plants, even for A/B slaves with 4 DI/4 DQ and current analog modules with an A/B address
- Faster and more reliable commissioning of the AS-Interface modules
- One-hand operation possible, with unique selection of the functions
- Connection via M12 socket (pin 1: ASI+; pin 3: ASI-; pins 2, 4, 5: not used)
- Universal applicability for all AS-i networks

| 3RK1902-4HB50-5AA0 | **M12 cable plug**[2] • Extruded M12 plug (angled cable feeder 90°), other cable end open • Length: 5 m, 5-pole, color: Black | 5 | **3RK1902-4HB50-5AA0** | 1 | 1 unit |
| 3RK1902-4BA00-5AA0 | **M12 plug, straight**[2] • For screw fixing, 5-pole screw terminal, max. 0.75 mm$^2$ • A-coded, max. 4 A | 5 | **3RK1902-4BA00-5AA0** | 1 | 1 unit |

1) Not included in scope of supply of the 3RK1904-2AB02 addressing unit.

2) For connecting the addressing unit to an AS-i network via AS-Interface M12 feeder, a connecting cable (M12 plug to M12 connector) must be produced and requires the following wiring:
- M12 cable plug: Pin 1 / core brown ↔ M12 plug: Pin 1
- M12 cable plug: Pin 3 / core blue ↔ M12 plug: Pin 3
- Pin 2, 4, 5 not connected.

## Overview

AS-Interface analyzer

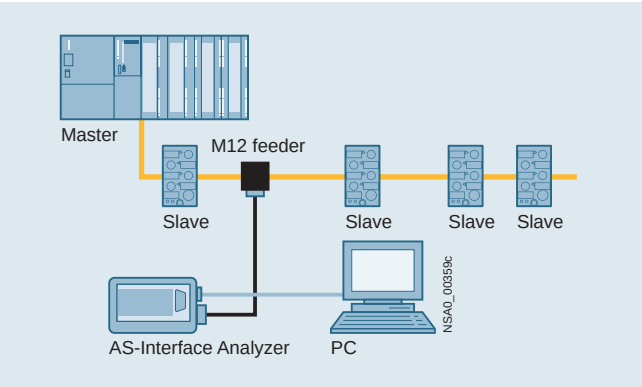
The AS-Interface analyzer is used to test AS-Interface networks.

Installation errors, e.g. loose contacts or EMC interference under extreme loads, can be revealed by this device.

Thanks to the easy-to-use software the user can assess the quality of complete networks even if he lacks detailed specialist knowledge of AS-Interface. In addition it is an easy matter with the AS-Interface analyzer to create test logs from the records produced, thus providing documentation for startups and service assignments.

For advanced AS-Interface users there are trigger functions for detailed diagnostics.

***Connection***



Connection of AS-Interface analyzer to PC and AS-Interface network

The AS-Interface analyzer follows the communication on the AS-Interface network as a passive station. The unit is supplied simultaneously from the AS-Interface cable.

This analyzer interprets the physical signals on the AS-Interface network and records the communication.

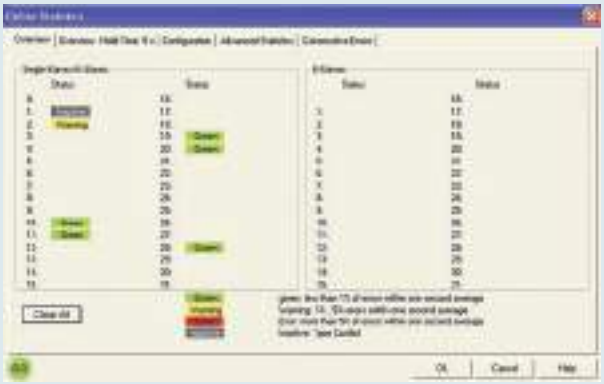
The data thus obtained is transferred through an RS 232 interface to a PC such as a notebook, for evaluation with the supplied diagnostics software.

## Benefits

- Simple and user-friendly operation enables diagnostics of AS-Interface networks without help from specialists
- Speedy troubleshooting thanks to intuitive display in statistics mode
- Test logs provide verification of the state and quality of the installation for service and approval
- Recorded logs facilitate remote diagnostics by Technical Support
- Comprehensive trigger functions enable exact analysis
- Process data can be monitored online

## Application

### *Online statistics*



Online statistics, overview

Online statistics, details, e.g. here a fault on slave 5

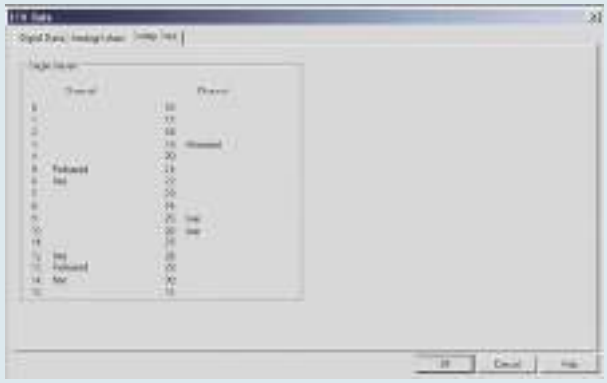
This mode provides a quick overview of the existing AS-Interface system. The error rates are displayed per slave in a traffic-light function (green, yellow, red).

The bus configuration and the currently transmitted data of the slaves are shown in a well arranged presentation.

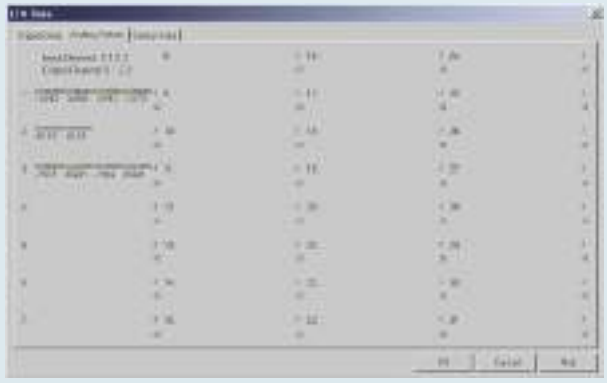
With the expanded statistics function, it is possible to determine the error rates as the number of transmitted or faulty bus message frames.

The bundle error overview shows in steps how many multiple repetitions of message frames occurred in order to enable a selective and look-ahead assessment of the transmission quality.

### *Data mode*



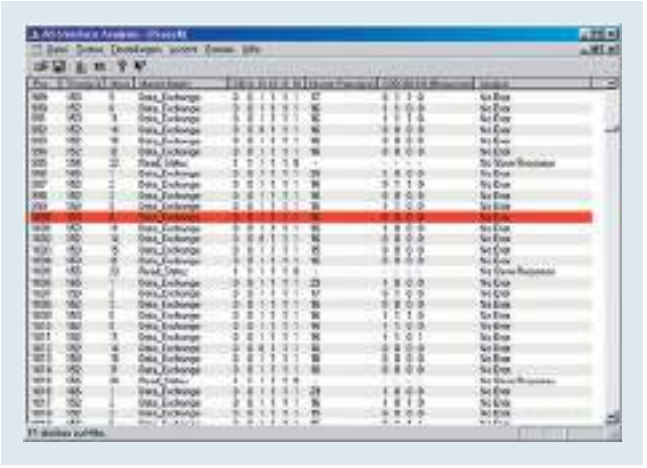
Presentation of the I/O data: Safety data



Presentation of the I/O data: Analog values

In this mode, the analyzer shows not only the digital input/output values but also the current analog values and the input status of the safety slaves.

### *Trace mode*



Presentation of message frames in trace mode

The presentation of message frames in the style of a classic fieldbus analyzer is indispensable for complex troubleshooting. Extensive trigger functions and recording and viewing filters are available for this purpose. An external trigger input and trigger output round off the scope of functions in order to find even the most difficult errors.

For troubleshooting in connection with ASIsafe applications, changes of status in the code tables of safety slaves are identified and assessed.

The AS-i analyzer can be used with an AS-i master in accordance with AS-Interface specification V3.0 or a predecessor version.

The analyzer does not automatically decode the process values for type CTT2 - CTT5 AS-i slaves. As for other slave types, the message frames are recorded and evaluated in the statistics. If required, decoding can also be performed by the user manually.

More information, see https://support.industry.siemens.com/cs/ww/en/view/109746763.

### *Test log*

Example of a test log

The recorded data of the online statistics are easy to output and document using a test log. Verification of the state of the plant can thus be provided for approvals or service assignments.

The integrated measurement assistant records the bus signals for a variable duration, thereby triggering creation of an automatic test log. A standardized quality test of AS-i plants is thus possible.

Note:

The AS-Interface analyzer is suitable for standard AS-i networks and AS-i Power24V networks (min. operating voltage 20 V).

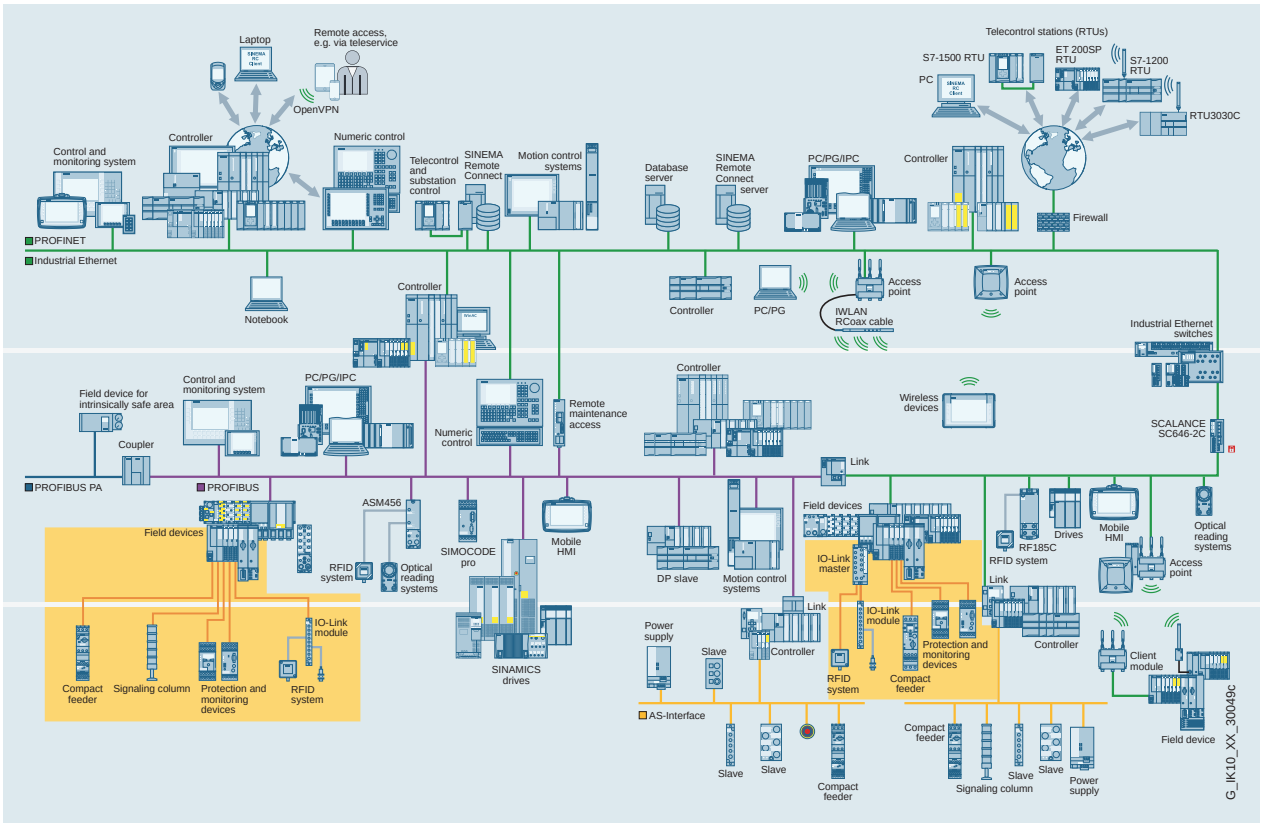
## Overview

IO-Link is an open communication standard for sensors and actuators – defined by the PROFIBUS User Organization (PNO). IO-Link technology is based on the point-to-point connection of sensors and actuators to the control system.

Parameter and diagnostics data are transmitted in addition to the cyclic operating data for the connected sensors/actuators. The simple, unshielded three-wire cable customary for standard sensors is used for this purpose.



IO-Link in the SIMATIC NET communications landscape

## Benefits

### *Engineering*

- Standardized, open system for greater flexibility (non-Siemens IO-Link devices can be integrated in engineering)
- Uniform, transparent configuring and programming through integrated engineering (SIMATIC STEP 7)
- Unassigned SIMATIC function blocks for easy parameterization, diagnostics and read-out of measured values
- Efficient engineering thanks to pre-integration into SIMATIC HMI
- Low error rate in CAD circuit diagram design as a result of reduced control current wiring

### *Installation and commissioning*

- Faster assembly with minimized error rate as a result of reduced control current wiring
- Less space required in the control cabinet
- Low-cost circuitry where there are several feeders by making full use of existing components

### *Operation and maintenance*

- High transparency in the system right down to field level and integration into power management systems
- Reduction in downtimes and maintenance times thanks to system-wide diagnostics and faster fault correction
- Support of predictive maintenance
- Shorter changeover times, even for field devices, by means of parameter and recipe management

## Application

IO-Link can be used in the following main applications:

- Easy connection of complex IO-Link sensors/actuators with a large number of parameters and diagnostics data to the control system
- Replacement of sensor boxes for connecting binary sensors with the IO-Link input modules optimized in terms of cabling
- Optimized cable connection of switching devices to the control system
- Simple transmission of energy values from the device to the control system for integration into a user program or power management

In these cases, all the diagnostics data are transmitted to the higher-level control system through IO-Link. The parameter settings can be changed during operation.

### *Integration in STEP 7*

Integration of the device configuration in the STEP 7 environment guarantees:

- Quick and easy engineering
- Consistent data storage
- Quick localization and rectification of faults

# IO-Link Introduction

## System components

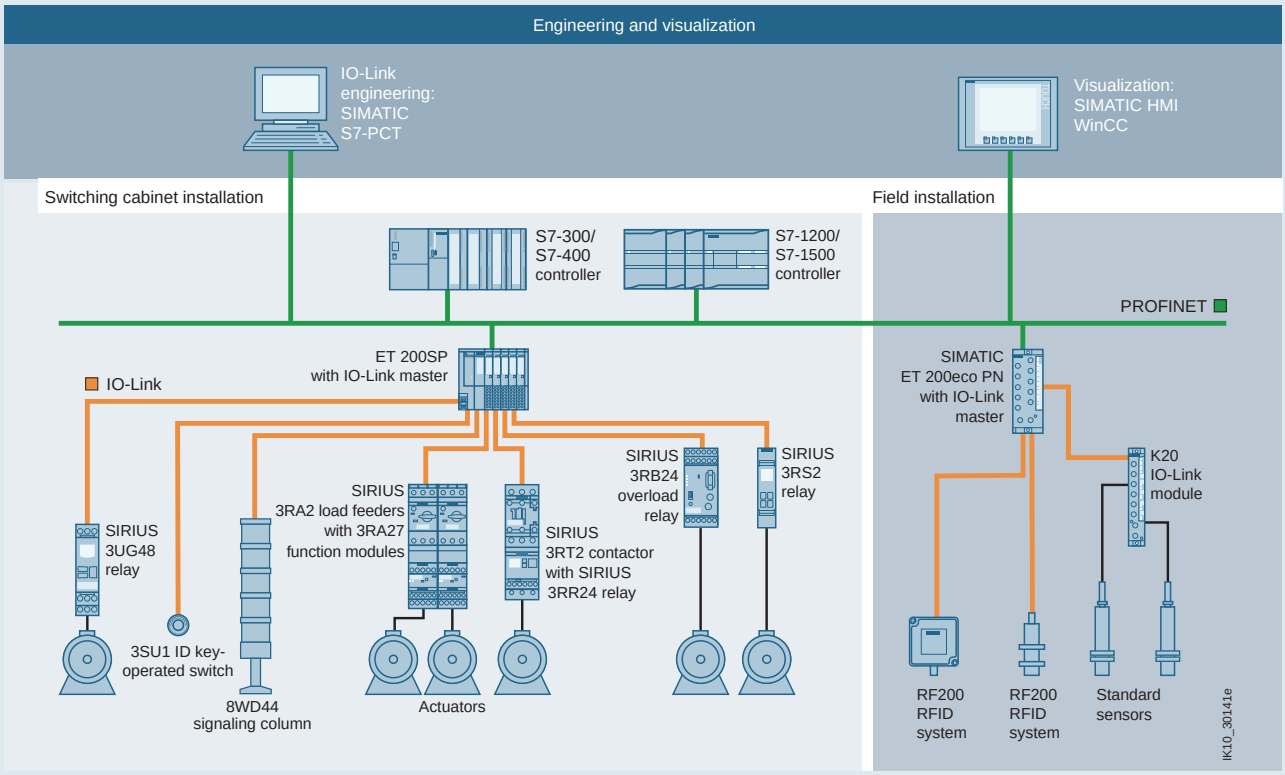
### Overview

| More information | |
|---|---|
| Homepage, see www.usa.siemens.com/io-link | For important topics at a glance, see https://support.industry.siemens.com/cs/ww/en/view/109737170 |

IO-Link product family

To implement communication, a system installation has the following main components:

- An IO-Link master
- One or more IO-Link devices, such as sensors (e.g. RFID systems), actuators or combinations thereof
- A standard 3-wire sensor/actuator cable



Example of a configuration with the system components

### *IO-Link compatibility*

IO-Link ensures compatibility between IO-Link-capable modules and standard modules as follows:

- IO-Link sensors can generally be operated both on IO-Link modules (masters) and standard input modules.
- IO-Link sensors/actuators as well as today's standard sensors/actuators can be used on IO-Link masters.
- If conventional components are used in the IO-Link system, then of course only the standard functions are available at this point.

### *Analog signals*

Another advantage of IO-Link technology is that analog signals are already digitized in the IO-Link sensor itself and are digitally transmitted via IO-Link communication. As the result, faults are prevented and there is no extra cost for cable shielding.

### *Enhancement with IO-Link input modules*

IO-Link compatibility also permits connection of standard sensors/actuators, i.e. conventional sensors/actuators can also be connected to IO-Link. This is particularly cost-effective with the IO-Link input modules, which allow several sensors to be connected at one time via a cable to the controller.

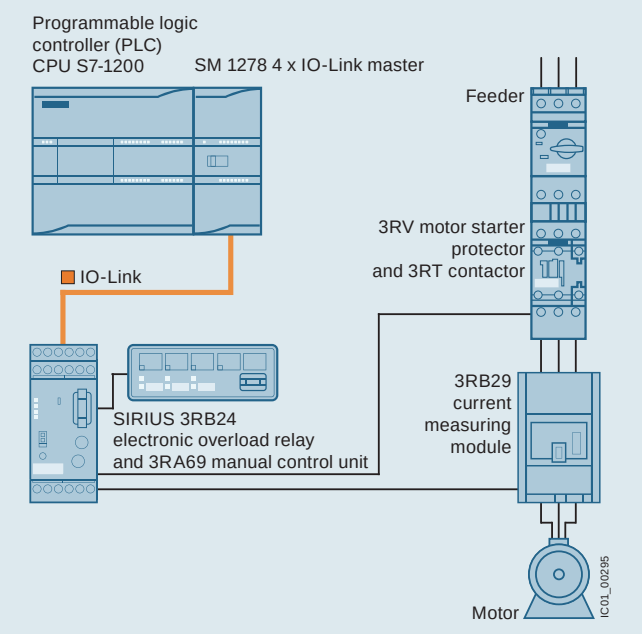
### *Overload relays*

A starter combination, for example, consists of one or more SIRIUS 3RT contactors and one 3RB24 electronic overload relay for IO-Link plus its 3RB29 current measuring module.

3RB24 overload relays with IO-Link are basically designed to provide current-dependent protection for loads against inadmissibly high temperature rises due to overload, phase asymmetry or phase failure.

Direct-on-line starters can, therefore, as shown in the image, be connected to the control system via IO-Link without much wiring. Remote control of connected contactors, current value transmission and immediate remote fault diagnosis are just some examples of the large number of functions that can be implemented with this device.

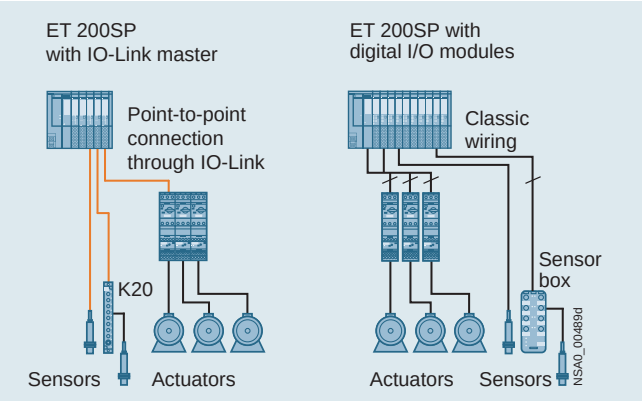
It is also possible to directly address a drive on-site via IO-Link using the optional hand-held device.



Connection of an IO-Link-capable overload relay to a SIMATIC S7-1200 controller

### *Load feeders and motor starters*

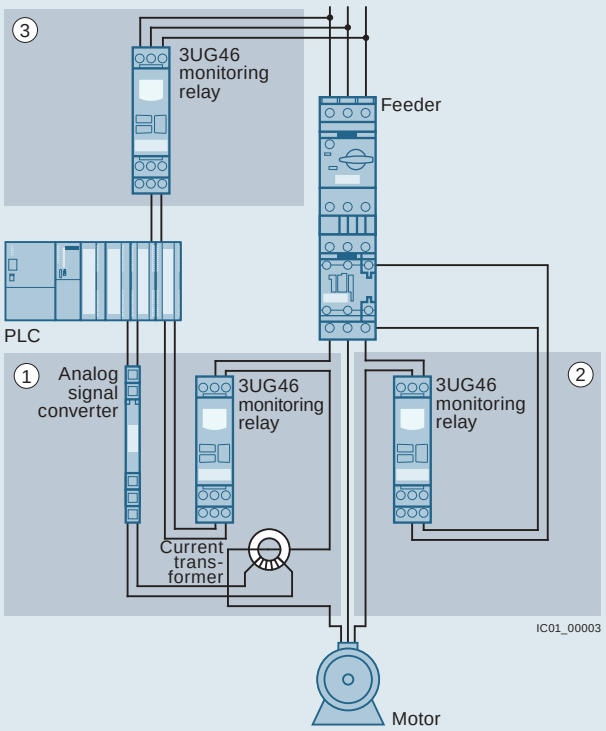
Through IO-Link it is possible to control not only sensors but also actuators in the form of load feeders and motor starters.



Possibilities for connecting load feeders and motor starters to IO-Link or in the conventional way

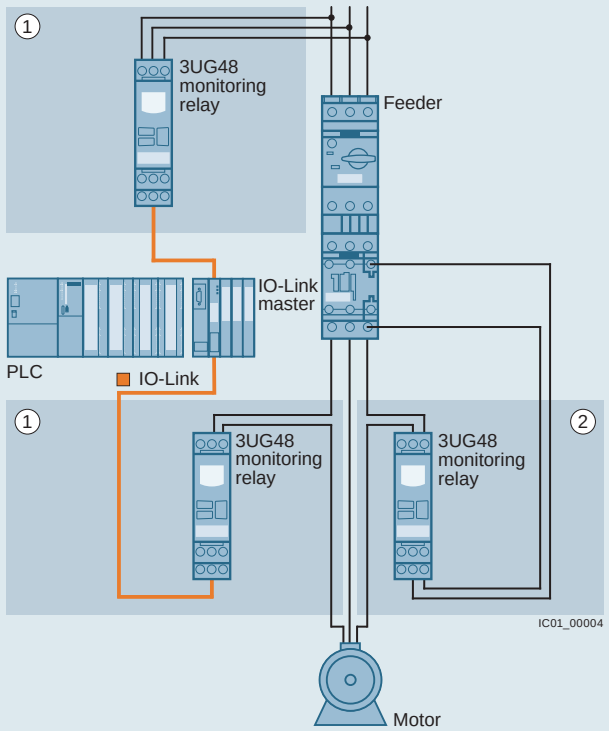
### *Monitoring relays*

By using monitoring relays with IO-Link it is now possible to send data that has already been recorded and evaluated in the devices directly to the controller. This avoids the use of duplicated sensors.



1 Signaling of limit value violation plus measurement data transmission to PLC
2 Autonomous operation without PLC
3 Signaling of limit value violation to PLC

Possibilities for interfacing conventional 3UG46 monitoring relays (in comparison with 3UG48)



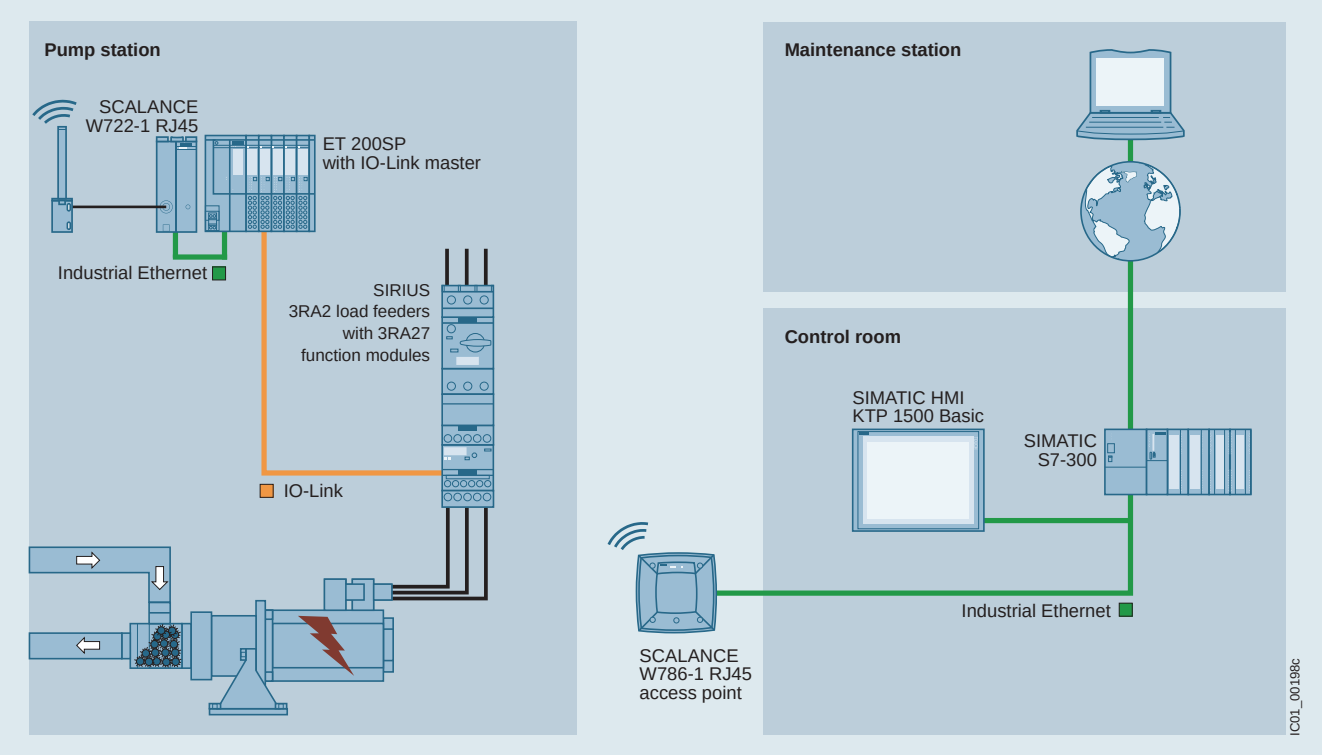
1 Signaling of limit value violation plus measurement data transmission to PLC
2 Autonomous operation without PLC

Possibilities of interfacing 3UG48 monitoring relays for IO-Link

### *Wireless communication*

Using an upstream IWLAN client module, such as SCALANCE W722-1 RJ45, allows IO-Link to be integrated into the PROFINET world via a distributed I/O. Possible uses include acting as an alternative to fault-prone cable carrier or collector wire technology.

The individual diagnostics options offered by the various IO-Link devices provide greater transparency for the production process. Just like the parameter data for a device, these diagnostics data can be evaluated remotely using the possibilities offered by SIMATIC. This supports remote maintenance down to the lowest level in the field.



Wireless communication between Industrial Ethernet and IO-Link components

#### IO-Link masters

**Masters**

CM 8xIO-Link for S7-1500

**IO-Link master module for S7-1500**

- CM 8xIO-Link communication module, see page 14/102

**IO-Link master module for S7-1200**

- SM 1278 4xIO-Link signal module, see page 14/102

**IO-Link master module for ET 200SP**

- CM 4xIO-Link communication module, see page 14/103

**IO-Link master module for ET 200pro**

- 4 IO-Link HF electronic module, see page 14/104

**IO-Link master module for ET 200eco PN**

- IO-Link master 4 IO-L + 8DI + 4DO 24 V DC/1.3 A
- IO-Link master 4 IO-L

See page 14/105

**IO-Link master module for ET 200AL**

- CM IO-Link communication module, see page 14/106

For full product range, see Catalog ST 70.

#### IO-Link devices

**Detection with IO-Link**

K20 input module

**IO-Link input modules**

K20 input module

- 4 inputs, M12 connections
- 8 inputs, standard M8 connections

See page 14/108

**Switching with IO-Link**

SIRIUS 3RA2711 function module for IO-Link

**Contactors and contactor assemblies**

- SIRIUS 3RT contactors, 3-pole up to 250 kW
- SIRIUS 3RA23 reversing contactor assemblies, up to 55 kW
- SIRIUS 3RA24 contactor assemblies for wye-delta starting, up to 90 kW
- SIRIUS 3RA27 function modules for direct-on-line, reversing, and star-delta (wye-delta) starting

See Catalog Section 5

SIRIUS 3RA64 direct-on-line starter

**Motor starters for use in the control cabinet**

SIRIUS 3RA64, 3RA65 compact starters for IO-Link, infeed systems and accessories

See Catalog Section 5

**Contactors with IO-Link**

SIRIUS 3RB24 overload relay

**Overload relays**

SIRIUS 3RB24 electronic overload relays for IO-Link

- Evaluation modules
- Current measuring modules from 0.3 to 630 A
- Controlling direct-on-line, reversing and star-delta starters via IO-Link in conjunction with contactors
- Full motor protection
- Diagnostics and current value transmission via IO-Link

See Catalog Section 5

#### IO-Link devices (continued)

**Monitoring with IO-Link**

SIRIUS 3RR24 monitoring relay

**SIRIUS 3RR24 monitoring relays for mounting onto 3RT2 contactors for IO-Link**

- Monitoring of current, phase failure, open circuit and phase sequence
- Designed for mounting on 3RT2 contactors
- Terminal supports for stand-alone installation for separate mounting

See Catalog Section 2

SIRIUS 3UG48 monitoring relay

**SIRIUS 3UG48 monitoring relays for stand-alone installation for IO-Link**

- Monitoring the supply system, voltage, current, power factor and active current, residual current or speed depending on device design
- On/tripping delay time can be adjusted

See Catalog Section 11

SIRIUS 3RS14 temperature monitoring relay

**SIRIUS 3RS14, 3RS15 temperature monitoring relays for IO-Link**

- Temperature monitoring with connected sensors
- Two limit values, can be adjusted separately

See Catalog Section 11

**Actuating and indicating with IO-Link**

SIRIUS ACT 3SU1 ID key-operated switch

**SIRIUS ACT 3SU1 ID key-operated switches for IO-Link**

- Access system and selection system for four authorization levels
- Authentication of groups and persons
- Five ID keys with different coding
- Option for individual coding via IO-Link
- For installation in enclosures or fastening on front plate
- Electronic module for ID key-operated switches must be ordered separately.

See Catalog Section 10

SIRIUS ACT 3SU1 electronic module

**SIRIUS ACT 3SU1 electronic modules for IO-Link**

- Eight digital inputs and outputs possible
- DI and DQ freely selectable (programmable)
- Input and output functions parameterizable
- Connection method (push-in)
- For fastening on front plate, see Catalog Section 10
- For installation in enclosure, see Catalog Section 10

Signaling column

8WD44 IO-Link adapter element

**8WD44 IO-Link adapter element**

- Up to five signaling elements can be connected using an IO-Link adapter element
- 24 V DC, diameter 70 mm
- Connection with bayonet mechanism
- For fastening on feet, 8WD44
- Connection elements with screw or spring-loaded terminals or connection element with 5-pole M12 plug

See Catalog Section 10

# IO-Link Introduction

## System components

### IO-Link RFID systems

RFID system for IO-Link

**SIMATIC RF200 RFID system in the HF range**

Products SIMATIC RF210R, SIMATIC RF220R, SIMATIC RF240R, SIMATIC RF250R, SIMATIC RF260R

- Simple identification tasks such as reading an ID number (UID)
- Reading of user data
- Writing of user data
- No RFID-specific programming, ideal for those new to RFID
- Simple connection via master modules for IO-Link, such as SIMATIC S7-1200, ET 200SP, ET 200pro, ET 200eco PN and ET 200AL
- Use with the tried and tested ISO 15693 transponders (MDS xxx)

See Catalog ID 10

### IO-Link Device Description (IODD)

IODD files for IO-Link

**IODD files**

These files provide the device description for IO-Link devices.

- Comprehensive IODD catalog of SIEMENS IO-Link devices
- Freely available for download from Industry Online Support, see https://support.industry.siemens.com/cs/ww/en/ps/15851

IODDfinder for IO-Link

**IODDfinder**

The entire world of IO-Link under one roof

The IODDfinder is a service provided by the IO-Link community. It is a central cross-vendor database for descriptive files (IODDs). In addition, the platform provides an overview of the available IO-Link devices.

For more information, see https://ioddfinder.io-link.com/#/.

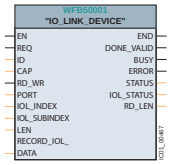
### IO-Link software

STEP 7 PCT

**STEP 7 PCT (Port Configuration Tool)**

Engineering software for configuring the IO-Link master modules for SIMATIC S7-1200, ET 200SP, ET 200pro, ET 200eco PN and ET 200AL

- Available as a stand-alone version or integrated into STEP 7 (V5.5 SP1 or higher) and TIA (V12 or higher)
- Engineering of the IO-Link devices connected to the master
- Monitoring of the process image of the IO-Link devices
- Open interface for importing further IODDs
- Freely available for download from Industry Online Support, see https://support.industry.siemens.com/cs/ww/en/view/32469496



IO-Link device function block

**IO-Link function blocks (IO-Link device and IO-Link master)**

STEP 7 function block for easy acyclical data exchange in the user program

- Freely available for download from Industry Online Support, see https://support.industry.siemens.com/cs/ww/en/view/82981502

"Siemens IO-Link Devices" block library

**"Siemens IO-Link Devices" block library**

This library provides function blocks and user-defined data types (UDTs) for all IO-Link devices from the Siemens portfolio. These blocks and UDTs standardize and simplify communication with IO-Link devices.

- Freely available for download from Industry Online Support, see https://support.industry.siemens.com/cs/ww/en/view/90529409

## Overview

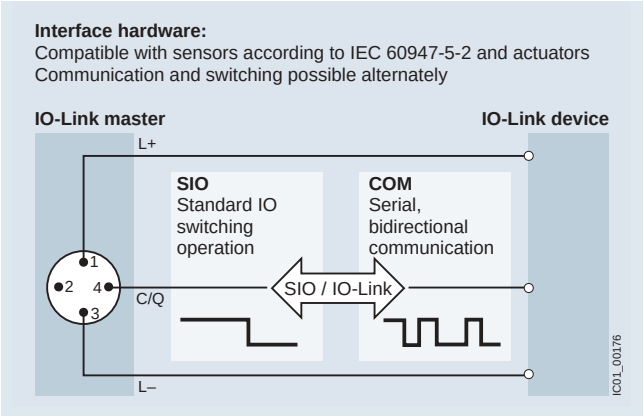
### *Principles of the IO-Link specification*

According to the IO-Link specification, communication functions as follows:

- Transmission takes place via an unshielded three-wire cable no more than 20 m long, of the kind normally used for standard sensors
- Digital communication from 0 to 24 V on the so-called C/Q cable
- Most of the values transmitted are measured values from the sensors
- The sensors and actuators are described by the IO Device Description (IODD)
- As a matter of principle, one IO-Link device can be connected to one IO-Link port of the master (point-to-point connection)
- The transmission rates between IO-Link master and the devices are as follows:
  - Via COM1: 4 800 Bd
  - Via COM2: 38 400 Bd
  - Via COM3: 230 400 Bd
- The average cycle time is 2 ms for the reading/writing of 16 data bits at a transmission rate of 38 400 Bd

### *IO-Link protocol*

The IO-Link protocol supports both the Standard IO mode (SIO) and the IO-Link communication mode (COM).



The structure of the protocol and its message frames depends on the types of data to be transmitted.

### *Data types*

The IO-Link specification makes a distinction between the following data types:

Process data

The process data of the devices are transferred cyclically in a data frame, with the process data width defined by the device. Process data of 0 to 32 bytes are possible per device (input and output in each case). The consistency width of the transmission is not fixed and therefore depends on the master.

Value status

Each port has a value status (PortQualifier). The value status indicates whether the process data are valid or invalid. The value status can be transferred cyclically with the process data.

Device data

Device data can be parameters, identification data and diagnostics information. Device data replacement is acyclic and in response to an inquiry from the IO-Link master. Device data can be written into the device (Write) and also read from the device (Read).

Events

When an event occurs, the device sends a signal to the master to report that an event is active. The master then reads out the event. Events can be fault messages (e.g. short-circuit) and warnings/maintenance data (e.g. contamination, overheating). Fault messages are transferred from the device via the IO-Link master to the controller or HMI. The IO-Link master can also transfer events and states. Events include, for example, cable break or communication breakdown.

Device parameters and events are sent independently of the cyclic transmission of process data. The transmissions do not affect or impair each other.

### *Data storage*

As of specification V1.1, a data storage concept has been created for IO-Link. In this concept, the IO-Link device initiates storage of its data on a higher-level parameter server. In the event that a device is replaced, the parameter server can restore the original parameterization. It is therefore possible to replace the devices without re-parameterization.

The IO-Link master contains the parameter server. The parameter server can also be implemented centrally in the PLC or in a system server. In this case the data must be downloaded to the control system by means of the function blocks provided.

### *IO-Link masters*

The IO-Link master is the interface to higher-level control systems. The IO-Link master presents itself to the fieldbus as a normal fieldbus node, and is integrated into the appropriate network configurator via the relevant device description (GSD file).

### *IO Device Description (IODD)*

The IO Device Description (IODD) has been defined to provide a full, transparent description of system characteristics as far as the IO-Link device.

The IODD contains information on communication characteristics, device parameters, identification, process and diagnostics data, and is supplied by the manufacturer. The design of the IODD is the same for all devices from all manufacturers, and is always presented in the same way by the IODD Interpreter Tools. This therefore ensures that the handling is the same for all IO-Link devices, whatever the manufacturer.

### *New in IO-Link specification V1.1*

The IO-Link specification is currently available in Version 1.1, and standardized in accordance with IEC 61131-9.

Specification V1.1 offers the following new features compared with the previous specification V1.0:

- Transmission of up to 32 bytes of process data in one cycle
- Parameter server function

# IO-Link: Masters

## IO-Link master module for S7-1500 > CM 8xIO-Link NEW

### Overview

CM 8xIO-Link master

- Communication module for connecting up to 8 IO-Link devices (three-wire connection) or 8 standard sensors
- Can be used directly downstream of an S7-1500 CPU or distributed in ET 200MP via PROFINET or PROFIBUS
- Powerful diagnostics functions facilitate preventive maintenance to avoid plant standstills
- Simple replacement of sensors/actuators without time-consuming parameterization

### Application

IO-Link makes it easy to change the parameters for manufacturing and processing different product versions and batches, even during CPU runtime, down to the sensor/actuator level. Easy, much more detailed diagnostics are also possible down to the sensor or actuator, including remote diagnostics.

The CM 8xIO-Link enables direct connection of up to 8 IO-Link devices directly to SIMATIC S7-1500 and ET 200MP. This makes external stations unnecessary.

This results in savings on wiring, engineering and commissioning, because everything can be configured centrally with the CPU.

### Design

- Fastening to the S7-1500 mounting rail with a single screw
- 40-pole front connector, optionally with screw terminals or push-in terminals
- Front flap with expandable cable compartment

Included in the scope of supply:

- One U connector
- Front door

### Function

Overview of functions

- Suitable for connecting up to 8 IO-Link devices (three-wire connection) or 8 standard sensors
- IO-Link master according to IO-Link specification V1.1
- Data transmission rates COM1 (4.8 kBd), COM2 (38.4 kBd), COM3 (230.4 kBd)
- Parameterizable diagnostics can be set for each channel
- Master backup with "IO_Link_MASTER_8" function block
- Replacement of the IO-Link device (for V1.1 devices only)
- Support for firmware updating of IO-Link devices
- Variable address range for I/O data with up to 240 byte inputs and 240 byte outputs; expansion limits:
  - Max. 32 bytes of input data and 32 bytes of output data per port
  - Max. 240 bytes of input data and 240 bytes of output data per module
- Port Qualifier Information (PQI)
- IO-Link port configuration with S7-PCT
- IO-Link port configuration with STEP 7 or GSD (without S7-PCT)
- Standard system functions of SIMATIC ET 200MP:
  - Identification and maintenance data IM0
  - Firmware update
  - Unequivocal, front-side module inscription

### Configuration

The IO-Link master of the S7-1500 can be conveniently configured using the graphical user interface in the free S7-Port Configuration Tool (S7-PCT, V3.5 and higher, SP1).

In addition to this configuration, commissioning without S7-PCT is also possible. In this case, the port is configured by means of either the TIA Portal or GSD file. The following port modes are supported:

- Operation in "IO-Link autostart" mode (default)
- Operation in "IO-Link manual" mode
- Operation as DI
- Deactivated

## Overview

SM 1278 4xIO-Link master

Module for connecting up to four IO-Link devices in accordance with the IO-Link specification V1.1. The IO-Link parameters are configured by means of the Port Configuration Tool (PCT) with version V3.2 and higher.

## Application

The SM 1278 module enables an exchange of data with up to four external IO-Link devices through one three-wire cable each or four standard actuators or standard encoders. Control can be flexibly adapted to the communication partners using the comprehensive parameter assignment options. Since IO-Link is compatible with standard sensors, commercially available sensors compliant with IEC 61131 Type 1 can also be operated on the IO-Link master.

## Design

- Expansion limits
  - Cable length: Max. 20 m
  - Max. 32 bytes of input data and 32 bytes of output data per port
  - Max. 32 bytes of input data and 32 bytes of output data per module

LED displays

- DIAG: Operating state display (green/red) of the module
- C1..C4: Port status display (green) for ports 1, 2, 3 and 4
- Q1..Q4: Channel status display (green) for ports 1, 2, 3 and 4
- F1..F4: Port error display (red) for ports 1, 2, 3 and 4

Depending on the CPU type used, up to 8 SM 1278 units can be used on one S7-1200 CPU.

## Function

Supported functions

- I&M identification data
- Firmware update
- SIO Mode (standard IO mode)
- IO-Link parameter assignment with the S7-PCT interface configuration tool, TIA Portal from V13 and an S7-1200 CPU V4.0 or higher

Supported data transmission rates

- COM1 (4.8 kBd)
- COM2 (38.4 kBd)
- COM3 (230.4 kBd)

## Overview

CM 4xIO-Link communication module

- CM 4xIO-Link communication module
  Serial communication module for connecting up to four IO-Link devices in accordance with the IO-Link specification V1.0 and V1.1. The IO-Link parameters are configured by means of the Port Configuration Tool (PCT) with version V3.0 and higher.
- Time-based IO
  Time-based IO ensures that signals are output with a precisely defined response time. By combination of inputs and outputs, products passing by, for example, can be measured exactly or liquids can be perfectly dosed.
- Supported data transmission rates
  - COM1 (4.8 kBd)
  - COM2 (38.4 kBd)
  - COM3 (230.4 kBd)
- Expansion limits
  - Cable length: Max. 20 m
  - Max. 32 bytes of input data and 32 bytes of output data per port
  - Max. 144 bytes of input data and 128 bytes of output data per module
- ET 200SP system functions supported
  - Exchange of IO-Link device parameters (V1.1 devices only) and of IO-Link master parameters without a PG including automatic backup recovery without an engineering tool by means of redundant parameter storage on the e-coding element
  - Reparameterization during ongoing operation
  - I&M identification data
  - Firmware update
  - PROFIenergy
- Can be plugged onto type A0 BaseUnits (BU) with automatic e-coding
- LED displays
  - DIAG: Operating state display (green/red) of the module
  - C1..C4: Port status display (green) for ports 1, 2, 3 and 4
  - Q1..Q4: Channel status display (green) for ports 1, 2, 3 and 4
  - F1..F4: Port error display (red) for ports 1, 2, 3 and 4
  - PWR: Supply voltage display (green)
- Informative front-side module inscription
  - Plain-text marking of the module type and function class
  - 2D matrix code (Article No. and serial number)
  - Circuit diagram
  - CM module class color coding: Silver
  - Hardware and firmware version
  - Complete article number
- Optional accessories
  - Labeling strips
  - Reference identification label
  - Color-coded label with color code CC04
- Optional system-integrated shield connection

## Application

- The CM 4x IO-Link communication module enables an exchange of data with up to 4 external IO-Link devices through one three-wire cable each.
- Control can be flexibly adapted to the communication partners using the comprehensive parameter assignment options.
- Since IO-Link is compatible with standard sensors, commercially available sensors compliant with IEC 61131 Type 1 can also be operated on the IO-Link master.

## Overview

4 IO-Link HF electronic module

- 45-mm-wide 4 IO-Link HF electronic module
- 4 IO-Link ports according to IO-Link specification V1.1
- Port class B
- The IO-Link parameters are configured using the Port Configuration Tool (S7-PCT), version V3.4 and higher

## Application

The 4 IO-Link HF electronic module enables the exchange of data with up to 4 IO-Link devices.

Since IO-Link is compatible with standard sensors, commercially available sensors compliant with IEC 61131 Type 1 can also be operated on the IO-Link master.

## Design

The 4 IO-Link HF electronic module is used together with the CM IO-Link 4 X M12 P connection module. Sensors and actuators are integrated using commercially available 3- or 5-pole M12 plugs on the CM IO-Link 4 X M12 P.

IO-Link devices (e.g. sensors) with a class A port are interconnected by means of a 3-wire cable. IO-Link devices that require an additional supply voltage and have a class B port (e.g. actuators) are interconnected by means of a 5-wire cable.

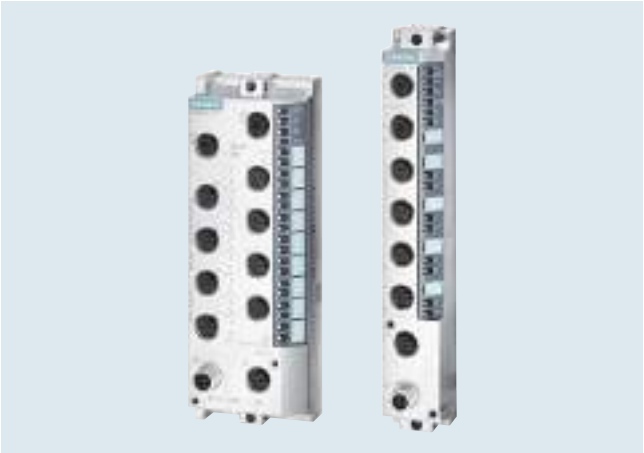
## Overview



ET 200eco PN IO-Link master modules

The ET200eco PN IO-Link master modules belong to the ET 200eco PN compact block I/O device family and are distinguished by the following features:

- Compact block I/O devices for connection of IO-Link devices and connection to the PROFINET bus system
- Design without a control cabinet in IP67 degree of protection with M12 connection technology
- Very rugged and resistant encapsulated metal enclosure
- Compact module in an enclosure width of 30 mm or 60 mm
- PROFINET connection: 2 x M12 and automatic PROFINET addressing
- 100 Mbps data transmission rate
- LLDP neighborhood detection without PG
- Supply and load voltage connection: 2 x M12
- Channel-exact diagnostics

## Application

IO-Link enables easy integration of sensors and actuators from different manufacturers. ET200eco PN IO-Link master modules enable an exchange of data with up to 4 IO-Link devices. Since IO-Link is compatible with standard sensors, commercially available sensors compliant with IEC 61131 Type 1 can also be operated on the IO-Link master.

With a high degree of protection, ruggedness and small dimensions, the IO-Link master modules are especially well-suited for use at the machine level in confined spaces. They have adjustable parameters and diagnostic functions and can therefore be flexibly adapted to individual process requirements.

The following IO-Link masters are available:

- Compact module in an enclosure width of 30 mm for connecting up to 4 IO-Link devices in accordance with the IO-Link specification V1.0 and V1.1 and port class B
- Compact module in an enclosure width of 60 mm for connecting up to 4 IO-Link devices in accordance with the IO-Link specification V1.0 and port class A and an additional 8 digital inputs and 4 digital outputs.

## Design

The IO-Link master modules have a screw mounting hole at the front and side, and can be mounted in any position. As a result, they are extremely flexible to install on either a level surface or on aluminum mounting rails using sliding blocks.

ET 200eco PN IO-Link masters are compact modules with M12 connection technology.

Two load power supplies (4 A each) are available that can be used by the compact module or also be looped through to another compact module (line topology). PROFINET is connected via an M12 connection and can be looped through to a further PROFINET device. The maximum cable length to the IO-Link device is 20 m.

## Overview

CM IO-Link communication module

- 30-mm-wide CM IO-Link communication module
- For connecting up to 4 IO-Link devices in accordance with the IO-Link specification V1.0 and V1.1 and port class B
- The IO-Link parameters are configured by means of the Port Configuration Tool S7-PCT with version V3.2 and higher.

## Application

The CM IO-Link communication module supports data exchange between up to four IO-Link devices. IO-Link devices (e.g. sensors) with a class A port are interconnected by means of a 3-wire cable. IO-Link devices that require an additional supply voltage and have a class B port (e.g. actuators) are interconnected by means of a 5-wire cable.

Since IO-Link is compatible with standard sensors, commercially available sensors compliant with IEC 61131 Type 1 can also be operated on the IO-Link master.

The 30-mm-wide I/O modules are ideally suited for use in extremely confined spaces. They have adjustable parameters and diagnostic functions and can therefore be flexibly adapted to individual process requirements.

The following IO-Link masters are available:

- CM 4xIO-Link communication modules, 4XM12

## Design

The I/O modules have a screw mounting hole at the front and side, and can be mounted in any position. As a result, they are extremely flexible to install on either a level surface or on aluminum mounting rails using sliding blocks.

The CM IO-Link communication module features:

- A backplane bus connection (Ethernet connection) with M8 connection technology for connection to an interface module or other I/O modules
- A power supply connection with M8 connection technology with loop-through
- LED display for port status
- LED display for channel status in SIO mode
- LED display for module status (DIAG)
- LED display for load voltage 2L+ (PWR)
- Labeling plates for channel, module and slot identification
- Integrated cable tie holder
- Meaningful module inscription on front panel:
  - Plain text marking of module type
  - Interface marking
  - LED label
- Meaningful module inscription on side panel:
  - Article number, function level and FW version
  - 2D matrix code (Article No. and serial number)
  - Pin assignments of all interfaces

Labeling plates for channel, module and slot identification are supplied with the modules. These labeling plates can be inscribed using commercially available inscription machines.

# IO-Link: Input Modules

## General data

### Overview

IO-Link input modules

Using IO-Link technology, it is basically possible to connect standard sensors to IO-Link masters. However, connecting standard sensors directly to the IO-Link master does not exploit the full potential of IO-Link.

The solution lies in the technology of the IO-Link modules. Their use is a more economically attractive solution in comparison to the direct connection of a sensor.

The IO-Link input module technology enhances IO-Link via a pure point-to-point cable connection towards decentralized structures. The maximum cable length of an IO-Link connection between an IO-Link module and an IO-Link master is 20 m. The use of sensor boxes with accordingly complex and error-prone wiring is no longer necessary.

***Transmission of parameter and diagnostic signals***

The IO-Link input modules also offer the possibility of transmitting parameters and diagnostic signals. This enables for example the inputs of modules to be parameterized as NC contacts or NO contacts through IO-Link. An overload or short-circuit in the sensor supply is signaled to the control system through the IO-Link master.

***M8 and M12 terminals***

M8 and M12 terminals are available for connecting the sensors. Connection to the IO-Link master is made using a standard M12 connecting cable.

### Benefits

Benefits of using IO-Link input modules:

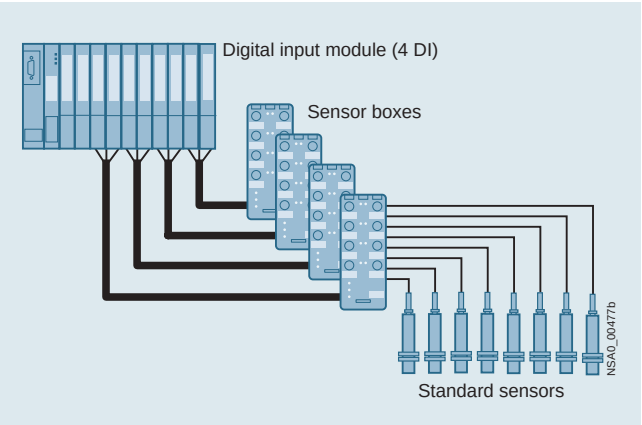
- Economical use of innovative IO-Link technology also for binary sensors
- Optimum use of all ports of the IO-Link master
- Connection of several binary sensors/actuators to one port of the IO-Link master, hence low-cost connection also of binary sensors/actuators to the control system through IO-Link
- Reduction of digital input modules in the peripheral station
- Use of parameters also for binary sensors (e.g. NC contacts, NO contacts and input delay can be parameterized)
- Reduction of cabling and hence less risk of wiring errors by dispensing with sensor boxes
- Expansion toward distributed structures using pure point-to-point wiring
- Easy and elegant integration of sensors within a radius of 20 m around an IO-Link master, e.g. in an ET 200 station
- Possibility of transmitting parameter and diagnostic signals (e.g. sensor supply overload)
- Can also be used in harsh ambient conditions thanks to a very compact design and degree of protection IP67

### Application

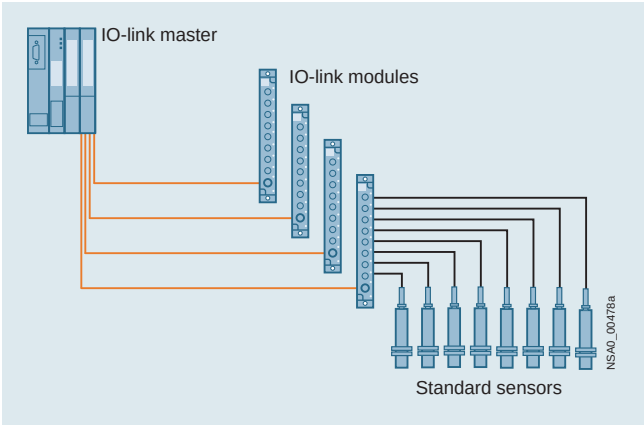
IO-Link input modules are particularly used where sensor boxes had previously been used for the connection of binary sensors.

Application example:

Replacement of sensor boxes by using IO-Link input modules



Former technology with sensor boxes



Technology with IO-Link input modules

# TIA Selection Tool

The smart configurator for the entire Siemens automation portfolio

## Prime reasons for the TIA Selection Tool

### Quick, easy and secure

Components can be selected, configured and ordered quickly, easily and securely from the Siemens automation portfolio.

### Intelligent

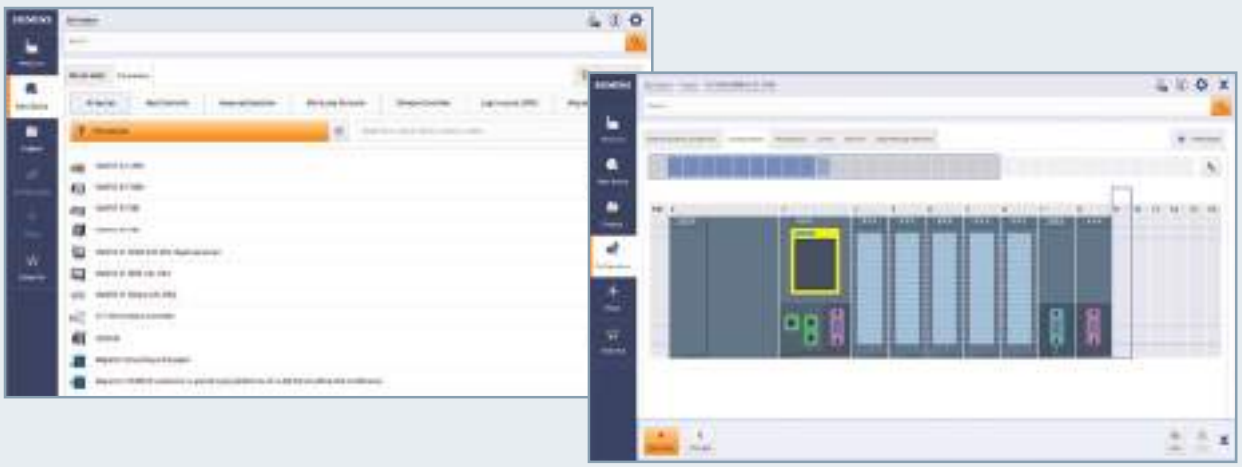
Intelligent selection wizards check the compatibility of the configured components and enable error-free ordering.

### Clear

Required modules, devices and networks are automatically generated and clearly compared to one another.

### Time-saving

Time savings of 80% in design – thanks to ease of use and intelligent support.



**The TIA Selection Tool is a completely paperless solution.**
**Download it now:**

# The product range at a glance

## Introduction

### Advanced power supplies

***SITOP PSU8600 – the power supply system with complete TIA integration and open communication all the way to the cloud***

### Advanced power supplies

***SITOP PSU8200 – the technology power supply for sophisticated solutions***

### Standard power supplies

***SITOP PSU6200 – the all-round power supply for a wide variety of applications***

### Standard power supplies

***SITOP smart – the high-performance standard power supply***

### Basic power supplies

***SITOP lite – the low-cost basic power supply***

### Basic power supplies

***LOGO!Power – the flat power supply for distribution boards***

### Basic power supplies

***SITOP compact – the slim power supply for switchboxes***

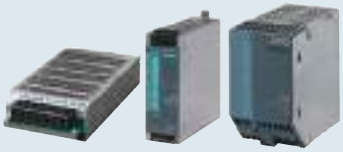
### SIMATIC design power supplies

***The optimum power supply for SIMATIC S7 and more***

### DC/DC converters

***Stable supply despite fluctuating DC voltage***

### Special designs and applications



***Designed for special tasks and conditions***

### SITOP DC-UPS Uninterruptible Power Supply

***SITOP UPS500 with capacitors***
Protection against power failure on the input side through buffering into the minutes range

***SITOP UPS1600 with SITOP PSU8600 battery modules plus DC-UPS***
Protection against power failure on the input side through buffering into the hours range. DC UPS with Ethernet/ PROFINET – open and systemintegrated in TIA

### Add-on modules

***Redundancy modules***
Protection against power supply failure by means of redundant configuration of the power supply unit

***Selectivity modules***
Protection against overload and short circuit by means of electronic protection of 24 V feeds

***Buffer modules***
Protection against power failure in the seconds range

***SITOP inrush current limiters***
Protecting your loads

# Selection tables for power supplies

## Introduction

### Part number selection table

# SITOP PSU8600 Power Supply System

## Three-phase

### Overview

The three-phase basic units of the SITOP PSU8600 power supply system accommodate within their extremely compact width an Ethernet/PROFINET interface as well as four individually parameterizable outputs (voltage and current threshold) with selective monitoring.

Without wiring overhead, further modules from the modular system can be added to expand the number of outputs (CNX8600), to increase the mains buffering time (BUF8600), or to buffer longer power failures (UPS8600 with BAT8600) according to requirements.

Comprehensive diagnostic and maintenance information is available via PROFINET. It can be evaluated directly in SIMATIC S7 and visualized in SIMATIC WinCC.

Energy management is also optimally supported by collecting the energy data for each output as well as individual activation and deactivation of the outputs via PROFIenergy.

The integrated OPC UA server also allows direct integration into automation applications with OPC UA clients made by different manufacturers, e.g. of controllers or PCs. Not only the parameter assignment but also the diagnostics of the power supply system are possible via the open interface.

- Three-phase wide-range input 400 to 500 V 3 AC for global use
- Extremely slim design with very high efficiency of up to 94%
- Versions with a configurable output with up to 20 A or 40 A and selective monitoring.
- Versions with four integrated, individually configured outputs with up to 5 A or 10 A each and selective monitoring
- Voltage and response threshold can be set separately and are infinitely adjustable for each output
- Extra power with 1.5 times the rated current (5 s/min) for brief functional overload
- Integrated Ethernet/PROFINET interface (2 ports)
- Easy configuration in the TIA Portal
- Comprehensive diagnostic information during operation
- Outputs can be deactivated and activated selectively via PROFIenergy
- Individual expansion options from the modular system (CNX8600 expansion modules, BUF8600 buffer modules, or UPS8600 with BAT8600 for buffering longer power failures) without wiring overhead

# SITOP PSU8200

## Single-, two- and three-phase

### Overview

SITOP modular are the technology power supplies for demanding solutions and provide maximum functionality for use in complex systems and machines.

The wide-range input enables connection to any power system in the world and ensures high safety even in the event of extreme voltage fluctuations. The power boost provides up to three times the rated current for brief periods, and with the extra power of 150%, loads with high power consumption can be connected without problems. And in the event of an overload there is a choice between constant current or automatic restart. The very high degree of efficiency keeps energy consumption and heating in the control cabinet low, and the compact metal housing also saves space.

To further increase 24 V availability, the SITOP modular power supply units can be combined with buffer, UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

For demanding applications from 5 A to 40 A

- 48 V/10 A and 20 A enable small conductor cross-sections
- Extremely slim design – no lateral clearances required
- Extra power function for brief operational overloads
- Power boost for tripping protective devices
- Selectable short-circuit behavior
- Optional symmetrical load distribution for parallel operation
- Very high degree of efficiency up to 95%
- Operating status indicated by 3 LEDs
- Wide temperature range from -25 °C to +70 °C
- Extensive certification such as cULus, ATEX, IECex or GL

## Overview

The SITOP PSU6200 product family is the new standard power supply for customers with extreme technical requirements regarding reliability, efficiency and integration.

The stabilized single-phase power supplies with a wide input range of 120–230 V AC nominal voltage and 120–240 V DC are available with an output voltage of 12 V in three performance classes and with an output voltage of 24 V in six performance classes. The high level of efficiency across the entire load range, as well as the minimal no-load losses, result in lower overall energy consumption. For power supply modules up to 10 A, a diagnostics LED indicates DC o.k.; this information is also reported by means of a relay for devices of 3.7 A and above.

To further increase the 24 V availability, the SITOP PSU6200 power supplies can be combined with buffer, DC UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

- Diagnostic monitor from 10 A output power
- Diagnostics interface from 10 A output power
- Constant current
- Robust AC input
- DC capability / wide-range input
- Narrow overall width
- Push-in terminals
- Selectivity and redundancy modules

# SITOP smart

## Single-phase and three-phase

### Overview

SITOP smart are the universal and powerful standard power supplies for mechanical and plant engineering.

Despite their compact design, they offer excellent overload behavior: Thanks to a power boost of 150%, loads with high power consumption can be connected without any problems and the permanent overload capability of 120% offers power reserves in case of expansions.

The high degree of efficiency results in low energy consumption and minimal heat generation inside the control cabinet.

To further increase 24 V availability, the SITOP smart power supplies can be combined with buffer, DC-UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

- Single- and three-phase standard applications up to 40 A
- Compact design, no lateral clearances required
- Extra power with 1.5 times the rated current (5 s/min) for brief operational overloads
- Permanent overload capability with 1.2 times the rated current up to 45 °C ambient temperature
- Adjustable output voltage for compensating voltage drops
- Parallel switching option to increase performance
- High degree of efficiency up to 91.5%
- Wide temperature range from -25 °C or 0 °C to +70 °C
- Comprehensive certification such as cULus, cCSAus, ATEX, IECEx and GL

# SITOP lite

## Single-phase

### Overview

The SITOP lite power supplies are designed for standard requirements in industrial environments and offer all important functions at a favorable price.

The wide range input with manual switchover supports connection to a variety of single-phase supply systems.

Thanks to the slim design, the power supplies have a low space requirement on the standard mounting rail, and their excellent degree of efficiency ensures low thermal losses in the control cabinet.

To further increase 24 V availability, the SITOP lite power supplies can be combined with DC UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

- 24 V/2.5 A, 5 A, 10 A and 20 A for industrial applications with standard requirements
- Single-phase wide range input with manual switchover
- Narrow width
- Excellent degree of efficiency
- Green LED for "24 V OK"
- Can be switched in parallel
- No lateral installation clearances required
- Ambient temperature range from 0 °C to 60 °C (from 45 °C with derating)
- Cooling through natural convection
- Short-circuit and overload protection
- Certification in accordance with CE, cULus and CB

## Overview

Our new miniature power supply units in the same design as the logic modules offer great performance in the smallest of spaces: Efficiency has been improved across the entire load range, and the low power losses in no-load operation ensure efficient operation.

The wide-range input for single-phase networks as well as operation with direct voltage, the wide operating temperature range, comprehensive certifications as well as the power reserve when switching on capacitive loads makes them suitable for universal use.

These reliable power supplies with their flat, stepped profile can be used extremely flexibly in numerous applications such as in distribution boards, for example.

To further increase 24 V availability, the LOGO!Power power supply units can be combined with DC-UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

- Single-phase wide range input from 85 V to 264 V AC and 110 V to 300 V DC
- Low width from a minimum of 18 mm to a maximum of 72 mm saves space in the control cabinet
- Higher efficiency level up to 90% over the entire power range and ERP-compliant no-load losses of < 0.3 W
- Flexible mounting with standard rail or wall mounting in different installation positions
- Load monitoring due to real-time measurement of the output current without disconnecting the cable, i.e. without interrupting the DC supply
- Reliable thanks to assured connection of heavy loads when starting up as well as constant current in the event of overload
- Wide temperature range from -25 °C to +70 °C
- Extensive certification such as cULus, CB, FM, ATEX, cCSAus Class I Div. 2, GL and ABS

# SITOP compact

## Single-phase

### Overview

SITOP compact is a series of power supplies for the low performance range. Thanks to the extremely space-saving slim design, they are especially suited to distributed applications in switchboxes or in small control cabinets.

The switching power supply units are characterized by their low power loss over the entire load range. With losses being extremely small even in no-load operation, these units are predestined for supplying machines and plants which are often in stand-by mode, for example. The switching power supply units have a wide range input for AC and DC networks, with plug-in terminals that facilitate easy electrical connection.

To further increase 24 V availability, the SITOP compact power supply units can be combined with DC-UPS, redundancy and selectivity modules, see pages 15/6 and 15/7.

- Small mounting area thanks to narrow design
- Single-phase wide range input for 85 V to 264 V AC and 110 V to 300 V DC
- High degree of efficiency over the entire load range, up to 28% energy savings compared to comparable units
- Low energy consumption in no-load operation and stand-by, possible energy savings of up to 53%
- Adjustable output voltage
- Green LED for "Output voltage OK"
- Plug-in terminals
- Temperature range from -20 °C to +70 °C

Extensive certification, such as UL, ATEX, GL and NEC Class 2 (24 V/3.7 A)

## Overview

The original SIMATIC power supplies harmonize perfectly with the PLC network in terms of their design and functionality. This ensures that controller and power supply are perfectly matched.

In addition, the start up and power reserves of the power supply units meet the requirements of the respective controllers. The mounting options of both components are the same. The issued certifications and the permitted temperature range allow the components to be used together in almost all areas.

The system test that was performed for each of the SITOP power supply units in SIMATIC design together with the respective SIMATIC controller is particularly noteworthy.

In addition to the following SIMATIC systems, the SITOP power supply units in SIMATIC design also supply further consumers reliably with 24 V.

- SIMATIC S7-300
- SIMATIC S7-1200
- SIMATIC S7-1500
- SIMATIC ET 200M
- SIMATIC ET 200MP
- SIMATIC ET 200pro
- SIMATIC ET 200SP

## Overview

DC-DC converters transform DC voltage supplied at the input into DC voltage with a higher, equal or lower voltage level.

This module is particularly suitable for using with battery-operated devices. The output voltage of the battery varies depending on the state of charge.

DC/DC converters ensure a stable 12 V DC or 24 V DC supply from connected loads, such as control units (CPUs).

If the power supply is unstable, these modules also serve to stabilize the voltage supply in the downtream branch.

- Reverse polarity protection at the input
- Adjustable output voltage for compensation of voltage drops
- Slim design: 32 mm width
- Wide input voltage range—optimized for operation with 24 V DC and 48 V DC batteries (for all states of charge)
- Permanent overload capability with 1.2 times the rated current up to 40 °C ambient temperature
- High efficiency of 89%–93%
- Minimal no-load losses of max. 1.5 W
- Ambient temperature range from -25 to +70 °C (derating > 60 °C)
- LED display for easy recognition of operating state
- Overvoltage protection on input side through insulation voltage input/output 1.5 kV DC
- CE marking and cULus approval
- Approvals for DNV GL, ABS (available soon)
- Parallel switching for enhanced performance

## SITOP PSU400M

### Overview

The SITOP PSU400M power supply with a 600 V DC input is suitable as an efficient DC/DC converter for drive and battery systems, wide input and temperature range, high efficiency, slim design and with 50% extra power for 5 s/min.

A voltage surge limiter is available as an accessory as ballast for the PSU400M. This gives the option of connecting the DC/DC converter directly to a DC voltage of up to 900 V DC.

## Overview

The PSU100D switch mode power supplies extend the Siemens power supply portfolio to include single-phase devices for direct wall mounting using screws.

The flat and rugged aluminum enclosure with IP20 degree of protection can be installed in various orientations and is therefore ideal for installation locations with limited space or for mounting in control cabinets and enclosures without a DIN rail.

The low-cost devices meet all the basic requirements for a power supply, typical applications being apparatus, automated equipment and automation solutions.

- For 12-V standard applications from 3 A to 8.3 A
- For 24 V standard applications from 2.1 A to 12.5 A
- Compact metal enclosure
- Wide-range input
- Green LED for "24 V OK"
- Certification in accordance with CE and UL
- Adjustable output voltage from 22 to 28 V or from 11 to 14 V for compensating voltage drops
- Temperature range from -10 °C to +70 °C

# SITOP PSU3600

## Special design, special use

### Overview

The SITOP PSU3600 single-phase power supply dual was designed as a two-voltage power supply with two independent outputs in order to allow electronic loads to be supplied with both a positive and negative voltage at the same time. If the two potential-free outputs are connected in series, a positive and negative supply voltage of e.g. ±15 V can be generated.

Or you can leave the independent outputs separate and supply different loads with different nominal voltages, e.g. 24 V and 15 V, with only a single power supply unit due to the wide adjustment range of the output voltage from 12 V to 28 V for each output.

In addition, both outputs are power limited according to NEC Class 2, opening up further application possibilities.

What to do if, for example, you need a power supply unit for 5 V, one for 15 V—and then one for 38.5 V as well? Install a special power supply every time?

SITOP PSU3600 power supply is the clever solution in this case! The output voltage can be flexibly adjusted between 3 and 52 V, with a maximum output power of 120 W. The current limitation can also be set between 2 and 10 A. Since you now only need one standard device for multiple applications, you save a lot of time in procurement and avoid costs for logistics and service.

But conventional use as a power supply is not the only conceivable application. The possibility of dynamically changing the output voltage during operation along with numerous additional functions open up a wide range of potential uses.

6EP3343-0SA00-0AY0

## Overview

The SITOP PSU100P 1-phase power supplies for wall mounting, with their rugged design and IP 67 degree of protection are ideal for distributed applications outside the control cabinet.

- 24 V DC/ 5 A and 8 A
- Automatic switchover of the input voltage
- Temperature range from -25 °C to +60 °C without derating
- High efficiency of 93 % for low internal power consumption
- Isolated relay contact "24 V OK"
- Operation display on the device by means of LED (green = "24 V OK", flashing red = overload)

## Overview

The SITOP PSU300E 3-phase power supply is designed with a 5 A output current for 24 V applications with low power requirements. The metal enclosure is only 42 mm wide and does not require any lateral gap to other devices on the DIN rail. This is made possible by the low heat dissipation (90% efficiency). The wide-range input from 320 V to 550 V AC permits mains buffering times of 50 ms and thus allows the supply to be used in unstable three-phase networks, thanks to UL certification also in North America. The removable plug-in terminals simplify the AC and DC connection.

This power supply is optimized for 48 V industrial applications with a focus on single-series and special-purpose machines in the manufacturing industry with power demands up to 5 A.

Thanks to the higher voltage of 48 V (instead of 24 V), the same amount of power can be used to achieve a higher performance – even over longer distances. Examples include low-cost machines for cost-efficient switching of valves and magnets, tool systems with electric controls instead of compressed air supplies, supplies for 48 V DC motors or devices which are connected with long cables.

# SITOP PSU3800 - Power supplies for charging batteries

## Special design, special use

### Overview

The SITOP PSU3800 3-phase power supplies are suitable for battery charging, thanks to their constant-current characteristic. For other applications, the output characteristic can also be switched to latching shutdown. The three-phase, wide-range input enables them to be used worldwide. The slim design requires little space on the DIN rail. Installation gaps are not required.

Thanks to their constant-current characteristic, SITOP PSU3800 3-phase power supplies (24 V DC/17 A and 30 A/ 40 A) are suitable for battery charging, thanks to their constant-current characteristic. For other applications the output characteristic can also be switched to latching shutdown. The three-phase, wide-range input enables them to be used worldwide. The slim design requires little space on the DIN rail. Installation gaps are not required.

# SITOP DC-UPS Uninterruptible Power Supply

## DC-UPS with capacitors

### Overview

To combat prolonged power failures, the 24 V SITOP power supply units can be upgraded into a 24 V DC uninterruptible power supply.

SITOP offers two systems with different energy stores for this purpose:

- Capacitors for 24 V buffering in the minute range
- Battery modules which provide a buffer in the hours range

The DC UPS systems are used, for example, in machine tool manufacturing, in the textile industry, on all types of production lines and filling plants, and in conjunction with 24 V industrial PCs. They prevent the negative consequences which often result from mains failures.

To bridge brief power failures, 24 V SITOP power supply units can be expanded with a SITOP UPS500 uninterruptible DC power supply (DC-UPS).

In PC-based automation solutions, the highly capacitive double-layer capacitors of the SITOP UPS500 supply enough energy to safeguard operating and application data and close software applications in a defined manner.

- Buffering into the minutes range depending on the load current and DC-UPS configuration
- SITOP UPS500S basic units for standard mounting rails can be combined with up to three UPS501S expansion modules
- SITOP UPS500P in degree of protection IP65 for distributed applications
- Absolutely maintenance-free double-layer capacitors
- Short charging times
- Long service life even at high ambient temperatures
- No ventilation of the installation location required
- USB interface for PC communication
- Easy PC integration thanks to free software tool

# SITOP DC-UPS Uninterruptible Power Supply

## SITOP UPS1600 DC-UPS modules

### Overview

To bridge longer power failures, 24 V SITOP power supply units can be expanded with a SITOP UPS1600 uninterruptible DC power supply (DC-UPS) and SITOP UPS1100 battery modules.

Intelligent battery management using Energy Storage Link automatically detects the UPS1100 energy storage device, and ensures optimum temperature-controlled charging and continuous monitoring. The compact DC-UPS modules have overload capability, for example, to supply the inrush current of industrial PCs. They enable starting from the battery for stand-alone operation.

The DC-UPS communicates openly through USB or Ethernet/PROFINET and can be easily integrated into the PC or PLC world. Complete integration in TIA offers user-friendly engineering in the TIA Portal and is supported by ready-to-use function blocks for S7 user programs and WinCC faceplates for rapid visualization.

Use of the SITOP UPS manager also enables easy monitoring and configuration in PC systems, e.g. the shutting down of several PCs in accordance with the master-slave principle.

- 24 V buffering for a few hours for continuing processes
- Open communication via USB or two Ethernet/PROFINET ports
- High overload capability for mains and buffering operation
- Intelligent battery management using Energy Storage Link: Automatic detection of the battery modules and selection of the optimum, temperature-controlled charging curve, monitoring of readiness, incoming cable, -aging and charge status
- All diagnostic data and alarm messages are available via USB and Ethernet/PROFINET
- Integrated OPC UA server facilitates flexible, multi-vendor communication with other systems (versions with Ethernet/PROFINET)
- Remote monitoring via integrated web server
- SITOP UPS Manager (free software download) supports configuration and monitoring on PC-based systems, see https://support.industry.siemens.com/cs/ww/en/view/75854607
- Complete integration in TIA:
  - User-friendly engineering in the TIA Portal, see https://support.automation.siemens.com/WW/view/en/75854606
  - SIMATIC S7 function blocks for integration in user programs (free download), see https://support.industry.siemens.com/cs/ww/en/view/78817848
  - Ready-to-use "faceplates" for SIMATIC Panels and SIMATIC WinCC (free download), see https://support.industry.siemens.com/cs/ww/en/view/78817848

# SITOP DC-UPS with Battery Modules

## SITOP UPS1100 battery modules

### Overview

SITOP UPS1100 maintenance-free battery modules with 1.2 Ah to 12 Ah for SITOP UPS1600 DC-UPS modules. The intelligent UPS1600 battery management charges the UPS1100 with the optimal, temperature-controlled charging characteristics and monitors the status (operating data and diagnostics information) via the energy storage link of the connected battery modules.

For longer buffer times, up to six battery modules can be connected in parallel. Mounting is on a standard mounting rail or directly on a wall.

| Battery modules | SITOP UPS1100 24 V/1.2 Ah<br>6EP4131-0GB00-0AY0 | SITOP UPS1100 24 V/2.5 Ah high temperature<br>6EP4132-GB00-0AY0 | SITOP UPS1100 24 V/3.2 Ah<br>6EP4133-0GB00-0AY0 | SITOP UPS1100 24 V/5 Ah LiFePo<br>6EP4133-0JB00-0AY0 | SITOP UPS1100 24 V/7 Ah<br>6EP4134-0GB00-0AY0 | SITOP UPS1100 24 V/12 Ah<br>6EP4135-0GB00-0AY0 |

| **Ambient temperature** | **Service life (with drop to approx. 80% of original capacity), depending on battery temperature, approx.** | | | | | |
| +20 °C | 4 years | 10 years | 4 years | 15 years | 4 years | 4 years |
| +30 °C | 2 years | 7 years | 2 years | 10 years | 2 years | 2 years |
| +40 °C | 1 year | 3 years | 1 year | 9 years | 1 year | 1 year |
| +50 °C | 0.5 years | 1.5 years | 0.5 years | 2 years | 0.5 years | 0.5 years |
| +60 °C | — | 1 year | — | — | — | — |

1) The determination of the buffer times is based on the discharge period of new and completely charged battery modules with a battery temperature of not less than +25 °C until shutdown of the DC UPS (19 V).

2) With two parallel connected UPS1100 battery modules and UPS1600 40 A.

Buffer times for additional values can be determined using the SITOP Selection Tool, see siemens.com/sitop-selection-tool.

## Overview

A power supply unit on its own cannot guarantee fault-free 24 V supply. Power failures, extreme variations in the mains voltage, or a faulty load can bring plant operation to a standstill and cause high costs. The expansion modules offer extensive protection against malfunctions on the primary and secondary sides, right through to complete all-round protection.

The redundancy module disconnects two 24 V power supply units of the same type, enabling the configuration of a redundant 24 V power supply. If a power supply fails, the 24 V supply is reliably maintained. Signaling takes place via LED as well as signaling contacts whereby the switching threshold for LED and signaling contacts can be adjusted.

For the redundant configuration, power supplies up to:

- 5 A → one redundancy module with 10 A summation current
- 10 A → two redundancy modules with 10 A summation current
- 20 A → one redundancy module with 40 A summation current
- 40 A → two redundancy modules with 40 A summation current

The buffer module bridges brief mains failures for up to several seconds for SITOP smart or SITOP modular 24 V power supply units. Maintenance-free capacitors are used as energy stores.

Buffering times:

- 200 ms at 40 A,
- 400 ms at 20 A,
- 800 ms at 10 A

To increase the buffer time (max. 10 s), up to 8 buffer modules can be connected in parallel. To bridge longer mains failures we recommend using uninterruptible power supplies with capacitors (up into the minutes range) or with battery modules (up into the hours range).

## Overview

The SITOP PSE200U selectivity modules and the SITOP select diagnostics module are used in combination with 24 V power supplies for distributing the load current among several current branches and for monitoring the individual partial currents.

Faults caused by overload or short circuits in individual branches are detected and selectively switched off so that the remaining load current paths remain unaffected. Rapid fault diagnosis is achieved and downtimes are minimized.

Signaling is performed via a group alarm contact or single-channel signaling. The selectivity modules with single-channel signaling output the status of the four channels cyclically by means of a serial code which can be read in by a digital PLC input.

Function blocks for SIMATIC S7-1500/1200/300/400 and for SIMOTION CPUs are available free of charge for the evaluation, see https://support.industry.siemens.com/cs/ww/en/view/61450284

## Overview

Particularly harsh industrial environments demand products with special characteristics - products that are more rugged than standard products.

Siemens offers the perfect answer to these requirements with SIPLUS extreme.
SIPLUS product variants are based on the SITOP, LOGO!Power standard power supplies and the power supplies for SIMATIC S7 and expansion modules, and feature the following characteristics:

- Extended ambient temperature range (e.g. -40 … +70 °C) and conformal coating as protection against extreme and difficult conditions and contact with substances
- DIN EN 50155:
  Conforms with standard for electronic equipment used on rolling stock (EN 50155, temperature T1, category)

| Ambient conditions | |
|---|---|
| Conformal coating | Coating of the printed circuit boards and the electronic components |
| Technical specifications | The technical data of the standard product applies except for the ambient conditions. |
| Relative humidity | 100%, condensation/frost permitted.<br>No commissioning in bedewed state. |
| Biologically active substances, compliance with EN 60721-3-3 | Class 3B2 mold and fungal spores (excluding fauna). The supplied plug covers must remain in place over the unused interfaces during operation! |
| Chemically active substances, compliance with EN 60721-3-3 | Class 3C4 incl. salt spray in accordance with EN60068-2-52 (degree of severity 3). The supplied plug covers must remain in place over the unused interfaces during operation! |
| Mechanically active substances, compliance with EN 60721-3-3 | Class 3S4 incl. conductive sand, dust.<br>The supplied plug covers must remain in place over the unused interfaces during operation! |
| Air pressure (depending on the highest positive temperature range specified) | 1080 ... .795 hPa (-1000 ... +2000 m)<br>see ambient temperature range<br>795 ... 658 hPa (+2000 ... +3500 m)<br>derating 10 K<br>658 … 540 hPa (+3500 … +5000 m)<br>derating 20 K |

# Power supplies for AS interface

## 1-phase / 1-2-phase / DC, AS-i 30 V (with data decoupling)

### Overview

AS-Interface power supply unit for 3 A

AS-Interface power supply units feed 30 V DC into the AS-Interface cable and supply the AS-Interface components. They contain performance-optimized data decoupling for separating communication signals and supply voltage. As the result, AS-Interface is able to convey both data and power along a single line. The power packs are overload and short-circuit proof.

#### *Dimensions*

AS-Interface power supply units have compact dimensions in widths of 50 / 70 / 120 mm. No clearance to other devices is required when mounting.

#### *Features*

- Higher rating: The power supply units deliver currents of 2.6 to 8 A.
- Integrated data decoupling: As the result, AS-Interface is able to convey both data and power along a single line.
- Integrated ground-fault detection: The power supply units perform the reliable detection and signaling of ground faults according to IEC 60204-1. The AS-Interface voltage can be disconnected automatically in the event of a ground fault.
- Integrated overload detection: An output overload is identified and signalized over a diagnostics LED.
- Diagnostics memory: Any ground faults or overloads on the output side are stored in a diagnostics memory until the device is RESET.
- Remote RESET and remote signaling: A ground fault can be signalized and evaluated by relay contacts over a central control and/or indicator light.
- Diagnostics LEDs: Three different LEDs indicate the status of the AS-Interface power supply locally at the power supply unit.
- Ultra-wide input range / 2-phase connection: The ultra-wide input range of 120 to 500 V of the 8 A version means that the supply units can be used in virtually any network worldwide. In addition, this version dispenses with the need for an N conductor as the device can be connected directly between 2 phases of a network.
- Operation with 24 V DC: The 3 A power supply unit is also available as a version with a 24 V DC input. This power supply unit is suitable for use in battery-operated plants or plants with uninterrupted power supply (UPS).
- Removable terminal blocks in spring-type connection: The power supply units are equipped with three removable terminal blocks for simple device replacement: for the input side, for the output side and for Signal/RESET connections.

### Benefits

- Complete solution for supplying AS-Interface networks while making full use of the maximum possible cable length per AS-i segment
- Only AS-i masters and AS-i slaves need to be connected to the AS-Interface cable to operate AS-Interface
- Compact, room-saving footprint
- Reliable power supply even for large numbers of AS-Interface modules with high power requirements
- Increased safety and savings on additional components owing to the integrated ground fault and overload detection
- Fast fault detection and reduced downtimes thanks to diagnostics memory, remote signaling and remote RESET
- Reduced downtimes as the result of removable terminal blocks which enable the fast exchanging of devices
- Ultra-wide input range of the 8 A version permits single-phase and two-phase operation and removes the need for an N conductor
- Can be used world-wide thanks to, for example, UL/CSA approval (UL 508)
- With the 2.6 A version, the output power is restricted to max. 100 W for use in Class 2 circuits in accordance with NEC (National Electrical Code)

### More information

More information on AS-Interface, see Catalog IC 10, Chapter 2 "Industrial Communication".

## Overview

PSN130S 30 V power supply units for 3 A, 4 A and 8 A

The PSN130S 30 V power supplies feed 30 V DC into the AS-Interface cable and supply the AS-Interface components, but do not include data decoupling. Additional data decoupling units are needed to separate communication signals and supply voltage, see "S22.5 Data Decoupling Modules" or "DCM 1271 Data Decoupling Module", see Accessories, page 14/4

The power supplies are overload and short-circuit proof.

### *Dimensions*

The 30 V power supply units have compact dimensions in widths of 50 and 70 mm. No distances to other devices must be observed during the installation.

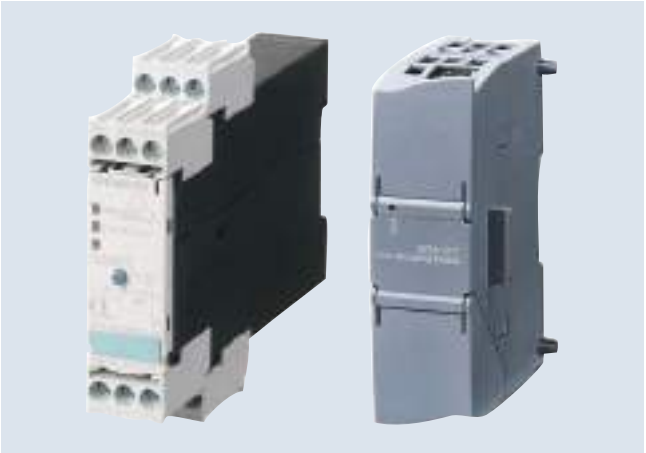
### *Features*

- Primary-clocked power supplies for connecting to a single-phase AC power supply system
- Power for currents of 3 A, 4 A and 8 A
- The output voltage is floating, and resistant to short-circuits and no-load operation. In the event of an overload, the output voltage will be reduced or switched off. After a short-circuit or overload the devices will start up again automatically.
- In the event of a device fault, the output voltage will be limited to max. 37 V.
- Modular installation devices in degree of protection IP20 and safety class I
- Diagnostics: With an output voltage > 26.5 V DC, the green LED (30V O.K.) is lit and the signaling contact 13-14 is closed.

## Benefits

- Low-cost alternative solution for supplying AS-Interface networks while making full use of the maximum possible cable length per AS-i segment
- Cost advantage particularly for multiple networks
- Compact, space-saving dimensions
- Reliable power supply even for large numbers of AS-Interface modules with high power requirements
- Can be used worldwide thanks to, for example, UL/CSA approval (UL 508)

## Application



Data decoupling modules S22.5 and DCM 1271

A data decoupling module is also required in order to use a PSN130S 30 V power supply unit for AS-Interface.

With the aid of the data decoupling module, the AS-Interface network can be supplied with 30 V DC from a standard power supply unit and the transmission of data and power can be realized along one cable.

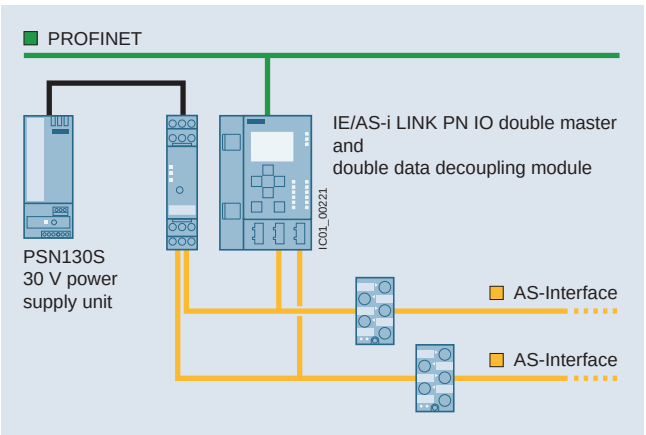
Alternatively, it is also possible to use a standard 24 V DC power supply unit (AS-i Power24V). However, in this case please note that all components involved must be designed for the reduced voltage and that the maximum length of an AS-i Power24V network is limited to 50 m.

The power supply units must comply with the PELV (Protective Extra Low Voltage) or SELV (Safety Extra Low Voltage) standards, have a residual ripple of < 250 mVpp and in the event of a fault, must limit the output voltage to a maximum of 40 V.

The combination of data decoupling modules and standard power supply units is therefore a cost-efficient alternative to the service-proven AS-Interface power supply units.

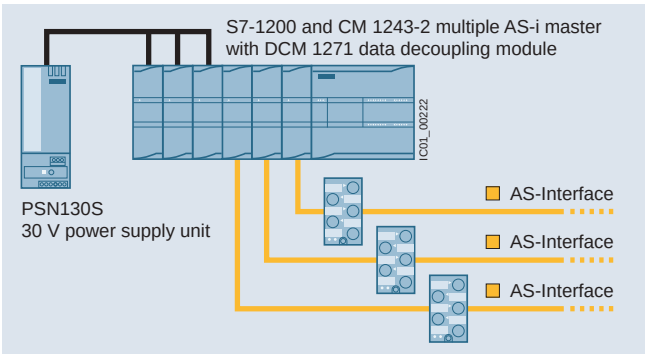
The quality of the data signals and the reliable operation of the AS-i network are not negatively affected as the result.

### *Configuration examples of AS-Interface networks with a 30 V power supply unit*



Configuration of AS-Interface multiple networks, each with one PSN130S 30 V power supply unit (examples with schematic representation): Double network based on S22.5 double data decoupling module and double master IE/AS-i LINK PN IO

## Application (continued)



Configuration of AS-Interface multiple networks, each with one PSN130S 30 V power supply unit (examples with schematic representation): Triple network based on SIMATIC S7-1200 with DCM 1271 data decoupling modules and CM 1243-2 communication processors

## More information

For operating instructions and other technical information see http://support.automation.siemens.com/WW/view/en/64364000.

More information on AS-Interface, see Catalog IC 10, Chapter 2 "Industrial Communication".

# Why choose the SCALANCE XB family of unmanaged switches?

**Designed for simple and cost effective entry into the Industrial Ethernet switch market, the Scalance XB family allows engineers to increase the number of end devices or network segments without the need for configuration.**

- Cost-effective solutions starting at $95
- FastEthernet and Gigabit models for maximum performance
- Seamless integration with SIMATIC design
- Compact design
- Plug-and-Play networking; no configuration required
- Distances up to 26km using Fiber
- DIN and wall mountable

## Reliability

Experience the rugged durability and extended reliability designed into all Siemens Industrial Ethernet products.

- Mean Time Between Failure (MTBF) over 100 years
- UL, CSA, CE and C-Tick Certified
- Large operating temperature range from -10° C to 60° C
- LED-diagnostics conveniently indicate power, link and transmission status on the faceplate

## Fiber Optics

Utilize SCALANCE XB Fiber Optic data transmission to evade electromagnetic interference and reach vast distances with minimal data loss.

- Optical SC-Port available
- Length of fiber-optic transmission:

  Max. 5 km with Industrial Ethernet FO cables Multimode

  Max. 26 km with Industrial Ethernet FO cables Singlemode

## Expand your industrial network with Siemens reliable unmanaged switching solutions

## Compact Design

Pocket-sized design allows for convenient placement of your industrial switch inside a panel, especially when space is at a premium.

- Dimensions: 45mm x 100mm x 87mm
- Weight: 165g to 260g

## Flexibility

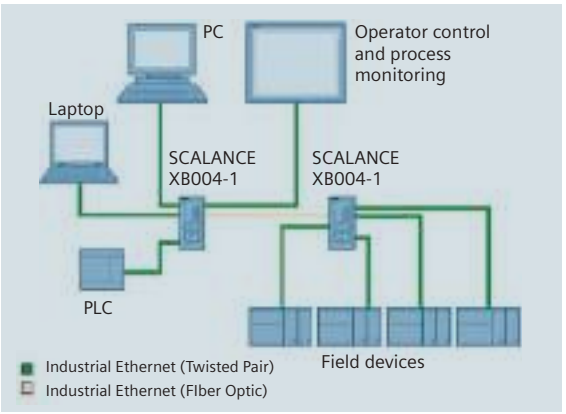
The SCALANCE XB line offers a comprehensive variety of unmanaged switches: full Gigabit capability and distances reaching up to 26 km with optional Fiber Optic ports. All eight switches come with the innovative dual-purpose DIN and Wall mount.

- 4 + 1, 5 and 8 Port models
- RJ45 and SC Fiber Optic connectors
- FastEthernet and Gigabit capability
- Singlemode or Multimode Fiber Optics
- Hybrid DIN/Wall mount

Simply connect your end devices to a SCALANCE XB and allow autosensing, autocrossover detection and autonegotiation features to set data transmission parameters. Large MAC learning tables allow seamless integration of Bus and Star topologies into your Industrial Ethernet network.

- Easy integration with PROFINET networks
- Data transmission rate detection via autosensing
- Autocrossover and autonegotiation
- MAC address learning tables up to 8 k

*Hybrid DIN/wall mount*



*Mixed star topology with SCALANCE XB004-1*

## FastConnect Cabling System

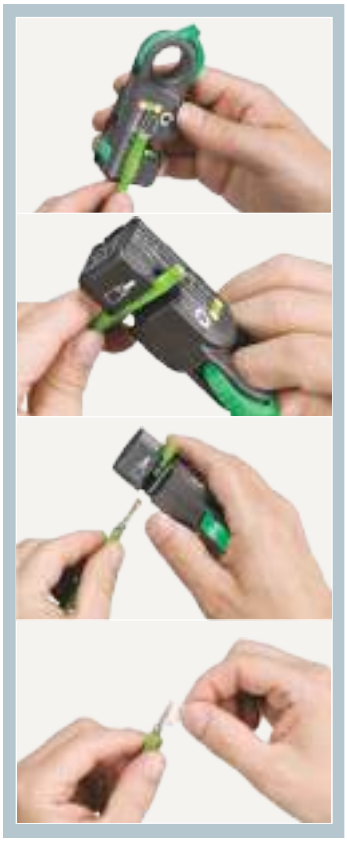
The FastConnect system provides a complete cabling solution for on-site assembly of custom length industrial Ethernet cables. The system comprises of a stripping tool, a full range of connectors, and various cable options.

Regardless of the type of connector you need, the assembly follows the same procedure.

Your benefits:

- Greater flexibility for configuring the optimum cable length with the right connector on site
- Reduced stocking costs for ordering pre-assembled cables
- Easy installation using just one tool
- Easy routing of cables with pre-assembled, angled connectors
- Wiring is simplified due to color coding and the transparent contact cover

**Cable Preparation**



**Termination**

### Cables for Industrial Ethernet FastConnect System

| | Product | Comments | Article no *) |
|---|---|---|---|
| Industrial Ethernet FastConnect cables 2 x 2 at 100 Mbit/s, sold by the meter, in bulk | | | |
| | IE FC TP Standard Cable GP 2 x 2 (Type A) | Standard bus cable (4-core) with rigid cores for fast assembly | **6XV1840-2AH10** |
| | IE FC TP Flexible Cable GP 2 x 2 (Type B) | Flexible bus cable (4-core), for occasionally moved machine components | **6XV1870-2B** |
| | IE FC TP FRNC Cable GP 2 x 2 (Type B) | Flexible, halogen-free bus cable (4-core), for occasionally moved machine components | **6XV1871-2F** |
| | IE FC TP Trailing Cable GP 2 x 2 (Type C) | Highly flexible bus cable (4-core) for continuous movement in cable carriers | **6XV1870-2D** |
| | IE FC TP Trailing Cable 2 x 2 (Type C) | Highly flexible bus cable (4-core) for continuous movement in cable carriers | **6XV1840-3AH10** |
| | IE TP Torsion Cable 2 x 2 (Type C) | Highly flexible bus cable (4-core) for continuous movement when using with robots | **6XV1870-2F** |
| | IE FC TP Food Cable 2 x 2 (Type C) | Flexible bus cable (4-core), for food, beverages and tobacco industries | **6XV1871-2L** |
| | IE FC TP Marine Cable 2 x 2 (Type B) | Bus cable (4-core), for marine and offshore use | **6XV1840-4AH10** |
| | IE TP Ground Cable 2 x 2 (Type C) | Bus cable (4-core) for fixed routing in soil | **6XV1871-2G** |
| | IE TP Train Cable GP 2 (Type C) | Bus cable (4-core) for special applications in trains; certified for railway applications | **6XV1871-2T** |
| Industrial Ethernet FastConnect cables 4 x 2 at 1000 Mbit/s, sold by the meter, in bulk | | | |
| | IE FC TP Standard Cable GP 4 x 2 | Standard bus cable (8-core), AWG22, Standard cable with rigid cores for fast assembly, for fixed installation | **6XV1870-2E** |
| | IE FC TP Flexible Cable GP 4 x 2 | Bus cable (8-core, AWG24) with flexible cores, Flexible cable for quick assembly, for occasionally moving machine parts | **6XV1878-2B** |

### Pre-molded Industrial Ethernet cables

| | | | | |
|---|---|---|---|---|
| | IE TP Cord RJ45/RJ45 | Patch cord, preferred length, pre-assembled with two RJ45 connectors | 0.5 m | **6XV1870-3QE50** |
| | | | 1.0 m | **6XV1870-3QH10** |
| | | | 2.0 m | **6XV1870-3QH20** |
| | | | 6.0 m | **6XV1870-3QH60** |
| | | | 10 m | **6XV1870-3QN10** |

*For additional cabling options, please refer to U.S. Part Number NTBR-1BK02-0114.

## Overview

***LOGO! logic module***

- The compact, easy-to-use and low-cost solution for simple control tasks
- Compact, easy to operate, universally applicable without accessories
- "All in one": Integrated display and operator panel
- 36 different functions can be connected at the press of a button or by means of PC software; up to 130 times over
- LOGO! 8: 38/43 different functions can be linked at the press of a button or using PC software; up to 200/400 times
- Functions are easy to change at the press of a button. No more time-consuming rewiring

***SIPLUS LOGO!***

- The controller for use in the toughest environmental conditions
- With extended temperature range from -40/-25 °C to +70 °C
- Suitable for exposure to environmental substances (harmful gas atmosphere)
- Condensation permissible
- With the proven PLC technology of LOGO!
- Easy to handle, program, maintain, and service
- Ideal for use in automotive engineering, environmental engineering, mining, chemical plants, material handling, food industry, etc.

Accessories:

- The front panel mounting set also allows simple and reliable installation of the logic modules in front panels; IP65 protection is thus possible.
- In order to ensure dependable operation of SIPLUS devices supplied by the battery in conjunction with combustion engines, it is necessary to put in a SIPLUS upmiter upstream device between the battery and the SIPLUS LOGO!.

## Technical specifications SIPLUS LOGO!

| | |
|---|---|
| Ambient temperature range | -40/-25 ... +70 °C |
| Conformal coating | Coating of the printed circuit boards and the electronic components |
| Technical data | The technical data of the standard product applies except for the ambient conditions. |
| **Ambient conditions** | |
| Extended range of environmental conditions | |
| • with reference to ambient temperature, air pressure and altitude | Tmin ... Tmax at 1080 hPa ... 795 hPa (-1000 m ... +2000 m) // Tmin ... (Tmax - 10K) at 795 hPa ... 658 hPa (+2000 m ... +3500 m) // Tmin ... (Tmax - 20K) at 658 hPa ... 540 hPa (+3500 m ... +5000 m) |
| • At cold restart, min. | 0° C |
| Relative humidity | |
| • with condensation, max. | 100 %; RH incl. bedewing/frost (no commissioning in bedewed state) |
| Resistance | |
| • to biologically active substances/ compliance with EN 60721-3-3 | Yes; Class 3B2 mold and fungal spores (except fauna); the supplied plug covers must remain in place on the unused interfaces during operation. |
| • to chemically active substances/ compliance with EN 60721-3-3 | Yes; Class 3C4 (RH < 75%) incl. salt spray in accordance with EN 60068-2-52 (severity 3); the supplied plug covers must remain in place on the unused interfaces during operation. |
| • to mechanically active substances, compliance with EN 60721-3-3 | Yes; Class 3S4 incl. sand, dust; the supplied plug covers must remain in place on unused interfaces during operation. |

# LOGO! basic and expansion modules

## LOGO! basic modules with display

### Overview

- The space-saving basic variants
- Interface for the connection of expansion modules, up to 24 digital inputs, 20 digital outputs, 8 analog inputs and 8 analog outputs can be addressed
- All basic units with integrated web server
- Enclosure width 72 mm (4 U)
- All basic units with Ethernet interface for communication with LOGO! 8, LOGO! TDE, SIMATIC Controllers, SIMATIC Panels and PCs
- Use of standard micro CF cards

# LOGO! basic and expansion modules

## SIPLUS LOGO! basic modules with display

### Overview

- The space-saving basic variants
- Interface for connecting expansion modules, up to 24 digital inputs, 20 (16) digital outputs, 8 analog inputs and 8 (2) analog outputs can be addressed
- With connection option for LOGO! TDE text display
- All basic units with integrated web server
- Same enclosure width as LOGO! 0BA6 (4 U)
- All basic units with Ethernet interface for communication with LOGO!, SIMATIC Controllers, SIMATIC Panel and PC
- Use of standard micro CF cards

Note:

SIPLUS extreme products are based on SIMATIC standard products. The contents listed here were taken from the respective standard products. SIPLUS extreme specific information was added.

## SIPLUS LOGO! basic modules without display

### Overview

- Basic variants optimized for costs
- Interface for connecting expansion modules, up to 24 digital inputs, 16 (20) digital outputs, 8 analog inputs and 2 (8) analog outputs can be addressed
- With connection option for LOGO! TDE text display
- All basic units with integrated web server
- Same enclosure width as LOGO! 0BA6 (4 U)
- All basic units with Ethernet interface for communication with LOGO!, SIMATIC Controllers, SIMATIC Panel and PC
- Use of standard micro CF cards

Note:

SIPLUS extreme products are based on SIMATIC standard products. The contents listed here were adopted from the respective standard products. SIPLUS extreme specific information was added.

## LOGO! CMK2000 communication module

### Overview

- Expansion module for LOGO! 8 basic versions
- For integrating LOGO! 8 in KNX installations
- With 24 digital inputs, 20 digital outputs as well as 8 analog inputs and outputs for processing process signals via KNX.

### Technical specifications

| **LOGO! CMK2000 communication module**<br>For integrating LOGO! 8 in the KNX building system bus, max. 50 communication objects can be configured;<br>RJ45 port for Ethernet;<br>supply voltage 24 V DC/40 mA | **6BK1700-0BA20-0AA0** |

## Overview

The module is used to connect a LOGO! and up to three other nodes to an Industrial Ethernet network with 10/100 Mbps in an electrical linear, tree or star topology.

The essential features of the LOGO! CSM are:

- Unmanaged 4-port switch, of which one port is on the front for easy diagnostics access
- Two versions for the voltage ranges 12/24 V DC or 230 V AC/DC
- Problem-free connection using four RJ45 standard connectors
- Space-saving, optimized for connection to LOGO!
- Low-cost solution for implementing small, local Ethernet networks
- Stand-alone use for networking any Ethernet devices

## Overview

LOGO! CMR in combination with the LOGO! logic module is a cost-efficient communication system suitable for monitoring and controlling distributed plants and systems via text message or email.

LOGO! CMR can send text messages or emails to predefined mobile network numbers as well as receive text messages from predefined mobile network numbers.

Sending a text message/email can be initiated by events in the LOGO! basic module as well as by the two digital alarm inputs of the LOGO! CMR. The values in the LOGO! logic module can be directly influenced by receiving a text message.

The LOGO! CMR offers comfortable Web Based Management commissioning and diagnostics via local and/or remote access.

The two digital outputs can also be switched remotely by incoming text messages/emails.

LOGO! CMR determines the current position of the module based on the GPS signal received by the GPS antenna. In addition, the LOGO! 8 logic module can be time-synchronized by means of the time included in the GPS signal. Determination of time by means of an NTP server or from the data of the mobile network provider offers more options for synchronization of the LOGO! BM with the current time of day.

Product version:

- LOGO! CMR2020 for use in GSM/GPRS mobile wireless networks
- LOGO! CMR2040 for use in LTE mobile wireless networks

Warning! The country-specific mobile network approvals must be observed:

http://www.siemens.com/mobilenetwork-approvals

## Overview

***The flat power supply unit for distribution boards***

Small. Clever. LOGO!Power

Small. Clever. LOGO!Power: Thanks to its stepped profile design, the LOGO! 8 product line is ideally suited for installation in small distribution boards. The stabilized power supplies with a wide range input of 100 … 240 V AC (85 … 264 V) and 110 ... 300 V DC are available in two performance classes with an output voltage of 5 V and 15 V, in three performance classes with 12 V and in four performance classes with 24 V. The 12 V and 24 V versions are ideal for supplying LOGO! controllers with the corresponding voltage input. The high level of efficiency across the entire load range as well as the low no-load losses result in lower overall energy consumption. Greater convenience when commissioning and servicing thanks to the integrated current monitor. The extended temperature range from -25 °C to +70 °C enables a host of additional applications.

To further increase 24 V availability, the 24 V LOGO!Power power supply units can be combined with **DC-UPS**, **redundancy** and **selectivity modules**.

LOGO!Power is the ideal choice when components need to be supplied with DC voltage. It can provide currents up to 4 A. This mini power pack can be used regardless of industry, e.g. in building technology applications for light and heating controllers or for access control systems. LOGO!Power is also well-suited for use in industrial automation, such as in packaging machine, machine tool, conveyor belt or sorting system applications.

***Main product highlights***

- Low width
  with minimum of 18 mm to maximum of 72 mm, thus requiring very little space in the control cabinet or distribution board
- High energy efficiency
  with efficiency levels of up to 90% over the entire power range and ERP-compliant no-load losses of < 0.3 W
- Global use
  due to operating temperature range from -25 °C to +70 °C and international certificates
- Load monitoring
  due to real-time measurement of the output current without disconnecting the cable, i.e. without interrupting the DC supply
- Flexible mounting
  with DIN rail or wall mounting in different installation positions
- Broad portfolio
  including 11 devices with 5 V, 12 V, 15 V and 24 V DC up to 100 watts (new: 12 V/0.9 A and 24 V/0.6 A)
- Flexible operation
  in all standard 1-phase supply networks thanks to wide range input of 100 … 240 V AC without switchover and operation on DC networks with 110 … 300 V DC
- Reliability
  due to problem-free connection of loads with high inrush currents thanks to power reserve when starting up as well as constant current in the event of overload

## Overview

Thanks to its stepped profile design, the LOGO!Power product family is ideally suited for low installation depths, such as in miniature distribution boards. The stabilized power supplies with a wide range input of 100 … 240 V AC (85 … 264 V) and 110 ... 300 V DC are available with an output voltage of 5 V in two performance classes. The high level of efficiency across the entire load range as well as the low no-load losses result in lower overall energy consumption. Greater convenience when commissioning and servicing thanks to the integrated current monitor. The extended temperature range from -25 °C to +70 °C enables a host of additional applications.

***Main product highlights***

- 5 V DC / 3 A and 6.3 A
- Narrow unit with 36 mm or 54 mm width and overall depth of 53 mm in LOGO! design
- Flexible mounting: DIN rail or wall mounting in a range of installation positions
- Higher energy efficiency: over the entire load range as well as no-load power losses of < 0.3 W
- Integrated current monitor: Actual output current measurement directly at the power supply unit
- Global use: Operating temperature range from -25 °C to +70 °C as well as international certifications such as UL, CSA, FM or ATEX

## Overview

Thanks to its stepped profile design, the LOGO!Power product family is ideally suited for low installation depths, such as in miniature distribution boards. The stabilized power supplies with a wide range input of 100 … 240 V AC (85 … 264 V) and 110 ... 300 V DC are available with an output voltage of 12 V in three performance classes. The 12 V versions are ideal for supplying LOGO! controllers with the corresponding voltage input. The high level of efficiency across the entire load range as well as the low no-load losses result in lower overall energy consumption. Greater convenience when commissioning and servicing thanks to integrated current monitor (for devices at least 36 mm wide). The extended temperature range from -25 °C to +70 °C enables a host of additional applications.

***Main product highlights***

- 12 V DC / 0.9 A, 1.9 A and 4.5 A
- Narrow unit with width of 18 mm, 36 mm or 54 mm and overall depth of 53 mm in LOGO! design
- Flexible mounting: DIN rail or wall mounting in a range of installation positions
- Higher energy efficiency: over the entire load range as well as no-load power losses of < 0.3 W
- Integrated current monitor: Actual output current measurement directly at the power supply unit (for devices at least 36 mm wide)
- Global use:
  Operating temperature range from -25 °C to +70 °C as well as international certifications such as UL, CSA, FM or ATEX

## Overview

Thanks to its stepped profile design, the LOGO!Power product family is ideally suited for low installation depths, such as in miniature distribution boards. The stabilized power supplies with a wide range input of 100 … 240 V AC (85 … 264 V) and 110 ... 300 V DC are available with an output voltage of 15 V in two performance classes. The high level of efficiency across the entire load range as well as the low no-load losses result in lower overall energy consumption. Greater convenience when commissioning and servicing thanks to the integrated current monitor. The extended temperature range from -25 °C to +70 °C enables a host of additional applications.

***Main product highlights***

- 15 V DC / 1.9 A and 4.0 A
- Narrow unit with 36 mm or 54 mm width and overall depth of 53 mm in LOGO! design
- Flexible mounting: DIN rail or wall mounting in a range of installation positions
- Higher energy efficiency: over the entire load range as well as no-load power losses of < 0.3 W
- Integrated current monitor: Actual output current measurement directly at the power supply unit
- Global use:
  Operating temperature range from -25 °C to +70 °C as well as international certifications such as UL, CSA, FM or ATEX

# LOGO!Power

## 1-phase, 24 V DC

### Overview

Thanks to its stepped profile design, the LOGO!Power product family is ideally suited for low installation depths, such as in miniature distribution boards. The stabilized power supplies with a wide range input of 100 … 240 V AC (85 … 264 V) and 110 ... 300 V DC are available with an output voltage of 24 V in four performance classes. The 24 V versions are ideal for supplying LOGO! controllers with the corresponding voltage input. The high level of efficiency across the entire load range as well as the low no-load losses result in lower overall energy consumption. Greater convenience when commissioning and servicing thanks to integrated current monitor (for devices at least 36 mm wide). The extended temperature range from -25 °C to +70 °C enables a host of additional applications.

To further increase the 24 V availability, the LOGO!Power power supplies can be combined with **DC UPS**, **redundancy** and **selectivity modules**.

***Main product highlights***

- 24 V DC / 0.6 A, 1.3 A, 2.5 A and 4.0 A
- Narrow unit with width of 18 mm, 36 mm, 54 mm or 72 mm and overall depth of 53 mm in LOGO! design
- Flexible mounting: DIN rail or wall mounting in a range of installation positions
- Higher energy efficiency: up to 90 % efficiency over the entire load range as well as no-load power losses of < 0.3 W
- Integrated current monitor: Actual output current measurement directly at the power supply unit (for devices at least 36 mm wide)
- Global use:
  Operating temperature range from -25 °C to +70 °C as well as international certifications such as UL, CSA, FM or ATEX

## LOGO! mounting kits

### Overview

LOGO! and SIPLUS LOGO! are designed for quick and easy mounting on DIN rails. With the mounting kit, these devices can also be easily and safely installed in front panels.
If the supplied washer and seals are used, the devices are reliably protected against harsh environmental conditions up to the IP65 degree of protection.

## Overview

- The user-friendly software for generating switching programs on the PC for single-user mode and network mode
- Generation of switching programs in a function block diagram (FBD) or ladder logic (LAD)
- Furthermore, testing, simulation, online testing and archiving of the switching programs
- Professional documentation due to manifold comment and print functions

***Minimum system requirements***

Windows XP (32-bit), 7 (32/64-bit) or 8 (32/64-bit)

- PC Pentium IV.
- 150 MB free disk capacity.
- 256 MB RAM.
- SVGA graphics card with minimum resolution 800 x 600 (256 colors).
- DVD-ROM

Mac OS X

- Mac OS X 10.4

Linux

- Tested with SUSE Linux 11.3 SP2, kernel 3.0.76
- Runs on all Linux distributions on which Java 2 runs.
- Please refer to your relevant Linux distribution for the necessary hardware requirements.

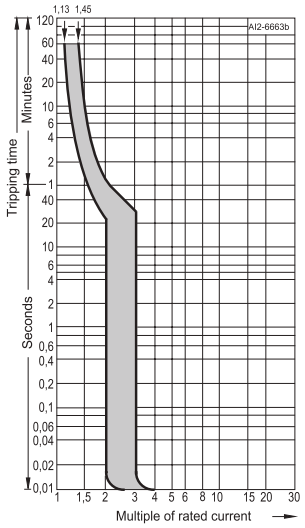
# General Data

## Trip characteristics

### Tripping characteristics acc. to EN 60 898

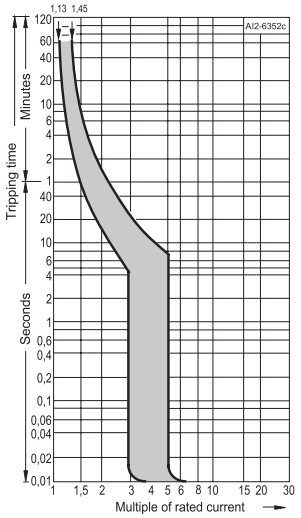
#### Tripping characteristic A, -5

Type A characteristic is designed to protect very sensitive circuits such as semiconductors. Magnetic trip point - 2 to 3 times $I_n$ rating. Thermal trip point - 1.13 to 1.45 protector rating.



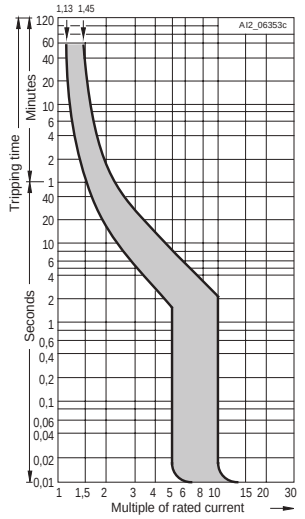
#### Tripping characteristic B, -6

Type B characteristic designed for European residential circuit protection. This characteristic can also be used for protection of computers and electronic equipment. Magnetic trip point - 3 to 5 times $I_n$ rating. Thermal trip point - 1.13 to 1.45 protector rating.



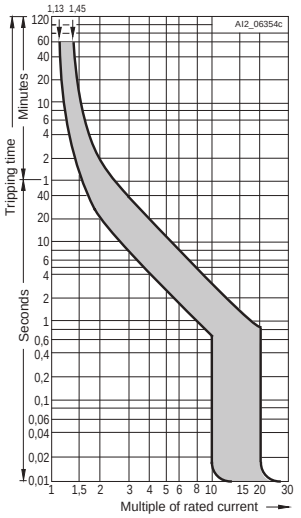
#### Tripping characteristic C, -7

Type C characteristic is for general device protection in control circuits. Magnetic trip point - 5 to10 times $I_n$ rating. Thermal trip point - 1.13 to 1.45 protector rating.



#### Tripping characteristic D, -8

Type D characteristic is designed for high inrush loads. Magnetic trip point - 10 to 20 times $I_n$ rating. Thermal trip point - 1.13 to 1.45 protector rating.



For different ambient temperatures, the current values of the delayed tripping operation change by approximately 5% per 10°K temperature difference. Specifically they increase for temperatures below 25°C (5SJ41), 30°C (5SP, 5SY) and decrease for temperatures above 25°C (5SJ41), 30°C (5SP, 5SY).

For DC voltages the maximum current values of the instantaneous tripping operation increase by a factor of 1.2.

If more that one electrical circuit is loaded in a series of miniature circuit breakers or supplementary protectors, the resulting increase in ambient temperature affects the characteristic curve. In this case an additional correction factor found in the following table must be used.

| Number | 1 | 2 - 3 | 4 - 6 | > 7 |
|---|---|---|---|---|
| Correction factor K | 1.00 | 0.90 | 0.88 | 0.85 |

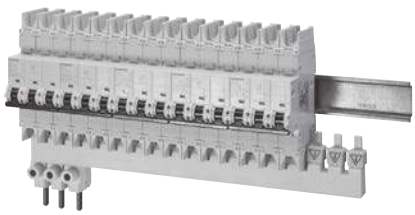
| Rated Current | B Characteristic: 6 to 63 A<br>C and D Characteristic: 0.3 to 63 A | | C Characteristic:<br>03. to 40 A<br>D Characteristic:<br>0.3 to 32 A |
| Interrupting Ratings[1] | B Characteristic:<br>14 kA (6 to 63 A) | — | — |
| | C Characteristic:<br>14 kA (0.3 to 40 A)<br>10 kA (45 to 63 A) | | C Characteristic:<br>10 kA (0.3 to 40 A)[2] |
| | D Characteristic:<br>14 kA (0.3 to 20 A)<br>10 kA (25 to 63 A) | | D Characteristic:<br>10 kA (0.3 to 32 A)[2] |

1) 14 kA = Type HSJ; 10 kA = Type NSJ.
2) At 240 VAC the Interrupting Rating is the same as the 5SJ4...-.HG40 and .HG41.



5SJ4…-.HG41 Miniature Circuit Breakers

Certifications:
CE
UL Listed and Certified to Canadian Standards
HACR Rated

### Features

**Features – UL 489**
- Suitable for Branch Circuit Protection Applications up to 277 VAC and 60 VDC (1-pole); and, up to 480Y VAC and 125 VDC (2- and 3-pole)
- UL Listed and Certified to Canadian Standards, File E243414
- HACR Rated
- Hight AC Interrupting Ratings of up to 14,000 (Type HSJ) or 10,000 (Type NSJ) Maximum RMS Symmetrical Amps and, DC interrupting ratings of 10,000 Amps
- 40°C Calibration Base (Industrial Applications)
- Can be used for "field wiring" applications; AWG 14 to AWG 4, Copper (Cu) Only
- Suitable for "reverse feed" applications

**Features – EN/IEC 60 898**
- 30°C Calibration Base
- Trip Characteristic B, C and D
  B: Designed for the protection of computers and electronic equipment. Magnetic trip point is 3 to 5 times the MCB rating.
  C: Designed for general device protection in control circuits and all other miniature circuit breaker systems. Magnetic trip point is 5 to 10 times the MCB rating.
  D: Designed for high inrush loads. Magnetic trip point is 10 to 20 times the MCB rating.
- Rated voltage of 24 VAC minimum, 440 VAC Maximum and 60 VDC per pole
- High Interrupting Rating ($I_{cn}$) of up to 10,000 Amps
- 0.75 to 35 $mm^2$ solid and stranded conductors

**Features – Common**
- Depending on the device selected
  - Available with 1-, 2- or 3-poles
  - Available from 0.3 to 63 amps
- Visible Indicator for ON and OFF/Trip
- Touch Protection to EN50274
- DIN Rail Mounting (Standard 35 mm)
- Identical Wlre Screw Connections on Line and Load Sides
- Smaller Size than traditionsl MCCB's

Auxiliary Circuit Switches (AS) are available with One Normally Open + One Normally Closed, Two Normally Open or Two Normally Closed contacts. They are primarily used to signal the miniature circuit breaker's trip mechanism position.

Fault Signal Contacts (FC) are available with One Normally Open + One Normally Closed, Two Normally Open or Two Normally Closed contacts. They are primarily used to signal the automatic tripping of the miniature circuit breaker's trip mechanism; and, trip position.

Shunt Trip Switches (ST) are available in voltages of 110 to 480 VAC and 24 to 60 V AC/DC. They are used for remote tripping of a miniature circuit breaker.

5ST366.-.HG busbars, touch protection covers and terminal connectors are intended for use with Siemens lines of 5SJ4…-.HG4. UL 489 Miniature Circuit Breakers. They are UL Recognized (File E32159) with a rating of 115 Amps maximum at 480Y/277 VAC. Busbars are available in 1-, 2- or 3-pole versions.

Touch Protection Covers are used to cover any unused busbar terminals. They are intended to protect a user from live electrical parts.

Terminal Connectors are used to connect electrical conductors up to 1 AWG (50$mm^2$) to the busbar terminals. Two versions are available; connecton directly to the miniature circuit breaker or direct connection to the busbar.

# 5SJ Branch Circuit Protection

## 5SJ4 70 mm mounting depth

### Features

**5SJ41..-.HG40** miniature circuit breakers are designed to comply with UL 489 and CSA 22.2 No. 5-02 standards. They are used in single pole, branch circuit protection applications up to 240 VAC maximum and 60 VDC maximum, same polarity. Refer to Technical Data (page 16/8) for additional information.

1) Interrupting Rating to UL489, AC Max. RMS Symmetrical: Type NSJ = 10kA, Type HSJ = 14 kA.

# 5SJ Branch Circuit Protection

## 5SJ4 70 mm mounting depth

### Features

**5SJ4...-.HG42** miniature circuit breakers are designed to comply with UL 489 and CSA 22.2 No. 5-02 standards. They are used in single and multi-pole, branch circuit protection and feeder applications up to 480Y/277 VAC maximum and 60/125 VDC maximum. Refer to Technical Data (page 16/8) for additional information.

## 5SY and 5SP supplementary protection

### Application

Siemens' UL 1077 Supplementary Protectors are designed to provide additional protection along with a branch circuit protection device. Since our Supplementary protectors are made to trip faster than a standard UL 489 Circuit Breaker they are able to provide additional protection for more sensitive devices inside the panel. Supplementary protectors can be used in a number of industrial applications such as to provide selectivity for multiple motor control circuits on the secondary side of a control transformer or power supply by allowing the user to quickly find the problem circuit should a fault occur without having to shut down all of the other control circuits. Supplementary protectors may also be used as a local disconnecting means inside the panel when a branch circuit protection device is already present.

Always remember to follow the National Electric code when wiring your panel for applications within the United States.

### Design

Supplementary protectors are equipped with a delayed overload/time-dependent thermal release (thermal bimetal) for low overcurrents and with an instantaneous electromagnetic release for high overload and short-circuit currents.

The special contact materials used virtually guarantee a long service life and offer a high degree of protection against contact welding.

### Mode of operation

Thanks to the extremely fast contact separation in cases of failures and the rapid quenching of the arc consequently generated in the arcing chamber, supplementary protectors assure a safe and current-limiting off-switching.

The permissible limit-$I^2t$-values of the energy limitation class 3 specified in EN 60 898 are generally undercut. This guarantees an excellent selectivity towards upstream overcurrent protection devices.

### Features

- High rated breaking capacity of up to 10,000 A acc. to EN 60 898 / up to 15 kA acc. to EN 60 947-2
- Excellent current limiting and selectivity characteristics
- Tripping characteristic A, B, C and D
- Terminals offer protection against contact with fingers or the back of the hand acc. to the German accident prevention regulations VBG 4/ BGV A2
- Combined terminals enable a simultaneous connection of busbars and feeder cables
- Uniform components that can be quickly mounted individually, thanks to their snap-on technique
- The handle locking device virtually prevents any unauthorized operation of the handle

#### Features of 5SY

- Rapid connection of the feeder cable in front of the busbar
- Identical terminals at both sides for an optional infeed from the top or the bottom
- No tool required for mounting or dismounting
- Supports a fast and comfortable removal from the assembly
- Trip indication

#### Features of 5SP4

- Disconnection characteristics acc. to EN 60947-3 (DIN VDE 0660 Part 107)
- Main switch characteristics acc. to EN 60 204-1
- Can be screwed onto bases
- Separate switch position indication.

### Device markings

# 5SY4 Supplementary Protection

## Overview

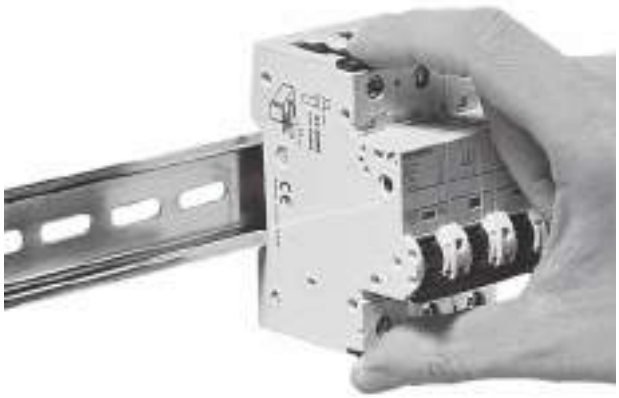
### Features of 5SY supplementary protectors

### Easier, faster, enlarged wiring space

- Identical top and bottom terminals
- Connection of incoming cables vis-à-vis of the busbar
- Enlarged and easily accessible wiring space for the feeder cables
- Comfortable insertion of the incoming cables into the terminal
- Defined, visible and controllable connection of the feeder cables
- Universal infeed with top and bottom busbar mounting options.

### Protection against contact with clear advantages

- Integrated movable terminal covers located at the feeder cable input
- The terminals are completely closed when screws are fully tightened
- Effective protection against contact, also when the device is fully grabbed



### Flexible and no use of tools required

- Manually operable quick-assembly and disassembly systems requiring no use of tools
- Fast assembly and disassembly of 5SY supplementary protectors to and from the standard mounting rail.
- All devices can be easily and comfortably replaced at any time.

### Removal from the assembly

Thanks to the combination of the various features stated above, 5SY supplementary protectors can be easily and rapidly removed from the assembly when circuits need to be changed - with these devices, removal of the busbar is no longer necessary.

# 5SY4 Supplementary Protection

## 5SY4 70 mm mounting depth

### Features

All 5SY4 designs have been certified to **UL 1077 and CSA 22.2 No. 235-M 89** and can therefore be used as "supplementary protectors" for applications up to 277 V AC (1-pole and 1-pole + N designs) and 480 V AC (2-pole, 3-pole, 3-pole + N and 4-pole designs).

1 MW = modular width of 18 mm. Depth = 70 mm.

# 5SY6 Supplementary Protection

## 5SY6 70 mm mounting depth

### Features

All 5SY6 designs have been certified to **UL 1077 and CSA 22.2 No. 235-M 89** and can therefore be used as "supplementary protectors" for applications up to 277 V AC (1-pole and 1-pole + N designs) and 480 V AC (2-pole, 3-pole, 3-pole + N and 4-pole designs). The only difference between 5SY4 and 5SY6 is the IEC 60898-1 Interrupting Rating. 5SY4 has10kA and 5SY6 has 6kA Interrupting rating according to IEC 60898-1. However, UL Interrupting ratings are the same for 5SY4 and 5SY6.

[1] 1 MW (modular width) = 18 mm.

# Supplementary Protection, High-Current Product Range

## 5SP4 70 mm mounting depth

### Features

5SP4 designs have been certified to **UL 1077 and CSA 22.2 No. 235-M 89** and can therefore be used as “supplementary protectors” for applications of up to 277 V AC (1-pole designs) and 480 V AC (2-pole, 3-pole, and 4-pole designs).

## 5SY5 70 mm mounting depth

### Features

All 5SY5 designs have been certified to **UL 1077** and can therefore be used as “supplementary protectors” for applications up to 277 VAC or 250 VDC (1-pole) and 480 VAC or 500 VDC (2-pole).

1) MW = modular width of 18 mm.
Depth = 70 mm.

# Supplementary Protection

## Additional components for 5SY4, 5SY5, 5SY6 and 5SP4 supplementary protectors

### Features

- UL Recognized to UL 1077 (5ST3 010, 011, 012, 020, 021 & 022)
- Individual retrofitting possible
- Assembly via factory-fitted clips
- Short-circuit protection via supplementary protectors of characteristic B or C and $I_n$ = 6 A or 6 A gL fuses
- Low output versions in accordance with EN 61131-2 for controlling PLCs

### Design

**Auxiliary switches (AS) and fault signal contacts (FC)**
(5ST30.0, 5ST30.1, 5ST30.2)

- Min. contact load: 50 mA, 24 V
- Max. contact load:
  NO contacts:
  2 A, 400 V AC, AC-14
  6 A, 230 V AC, AC-14
  1 A, 220 V DC, DC-13
  1 A, 110 V DC, DC-13
  3 A, 60 V DC, DC-13
  6 A, 24 V DC, DC-13
  NC contacts:
  2 A, 400 V AC, AC-13
  6 A, 230 V AC, AC-13
  1 A, 220 V DC, DC-13
  1 A, 110 V DC, DC-13
  3 A, 60 V DC, DC-13
  6 A, 24 V DC, DC-13
- Connectable to *instabus EIB* and AS-Interface bus via binary inputs

**Auxilliary switches (AS) with low output**
(5ST3013, 5ST3014, 5ST3015)

- Area of application: 1mA / 5 V DC to 50 mA / 30 V DC

### Application

Indication of the supplementary protectors' switching state:
- AS: ON/OFF
- FC: tripped

# Supplementary Protection

## Additional components for 5SY4, 5SY5, 5SY6 and 5SP4 supplementary protectors

### Features

**Shunt trips**

- Response limits acc. to DIN VDE 0660 Part 100, 7.2.1.4
- Suitable for voltages: 110 to 415 V AC, 110 V AC, 24 to 48 V AC/DC

### Application

Remote tripping of the supplementary protectors

### Selection and ordering data

| | | MW | Order No. | List Price $ 1 item | Price group | Weight 1 item kg |
|---|---|---|---|---|---|---|
| | **Shunt trips (ST) for 5SY4, 5SY5, 5SY6 and 5SP4 supplementary protectors 1)** | | | | | |
|   | 110-415 V AC | 1 | **5ST3 030** | | | 0.098 |
| | 24-48 V AC/DC | 1 | **5ST3 031** | | | |

### Features

**Undervoltage releases**

- Response limits acc. to DIN VDE 0660 Part 100, 7.2.1.3
- Suitable for voltages: 230 V AC, 110 V DC, 24 V DC
- Connectable to *instabus EIB* and AS-Interface bus via binary inputs.

### Application

- Applicable as remote trip in an EMERGENCY-OFF loop
- Assures disconnection of the control circuit acc. to EN 60 204
- In cases of interrupted or insufficient voltage, the undervoltage release trips the supplementary protector or prevents it from switching on.

# Supplementary Protection, General Data

## Tripping characteristics and breaking capacity

### Tripping characteristics

#### Tripping performance at an ambient temperature of 30 °C

| Tripping characteristic | Standards | Thermal release Test currents: low test current $I_1$ | high test current $I_2$ | tripping time 63 A ≥ $I_n$ $t$ | 63A ≤ $I_n$ | Electromagnetic release Test currents: hold $I_4$ | trips at the latest at $I_5$ | tripping time $t$ |
|---|---|---|---|---|---|---|---|---|
| A | | 1.13 x $I_n$ | | > 1 h | > 2 h | 2 x $I_n$ | | ≥ 0.1 s |
| | | | 1.45 x $I_n$ | < 1 h | < 2 h | | 3 x $I_n$ | < 0.1 s |
| B | IEC 60 898/EN 60 898 DIN VDE 0641 Part 11 | 1.13 x $I_n$ | | > 1 h | > 2 h | 3 x $I_n$ | | ≥ 0.1 s |
| | | | 1.45 x $I_n$ | < 1 h | < 2 h | | 5 x $I_n$ | < 0.1 s |
| C | | 1.13 x $I_n$ | | > 1 h | > 2 h | 5 x $I_n$ | | ≥ 0.1 s |
| | | | 1.45 x $I_n$ | < 1 h | < 2 h | | 10 x $I_n$ | < 0.1 s |
| D | | 1.13 x $I_n$ | | > 1 h | > 2 h | 10 x $I_n$ | | ≥ 0.1 s |
| | | | 1.45 x $I_n$ | < 1 h | < 2 h | | 20 x $I_n$ | < 0.1 s |
| | | | | | | | (IEC 60 898: 50 x $I_n$) | |

### Breaking capacity

Breaking capacity ratings for UL1077 are broken down in four main line voltages that are tested. These voltages shown in the table below.

For IEC ratings, there are special requirements with regard to the breaking capacity.

The values are standardized and determined according to the testing conditions of EN 60 898 and DIN VDE 0641 Part 11.

The most usual values are 6 000 and 10 000.

For other test conditions, other values can be specified which lie above those of EN 60 898 and DIN VDE 0641 Part 11.

An example of another standard is EN 60 947-2 or DIN VDE 0660 Part 101 for MCBs.

#### Interrupting Rating

| | | UL 1077 1-pole 120/240 V AC (in pairs) 240 V AC | 1-pole 240 V AC | 1-pole 277 V AC | 2-, 3-, 4-pole 480 V AC (3-phase) |

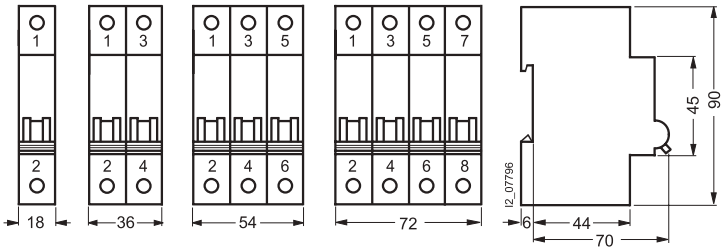
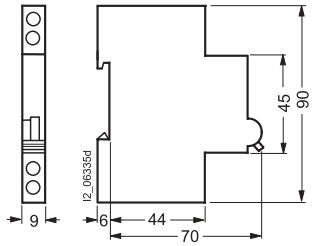
# Supplementary Protection

## Dimensions

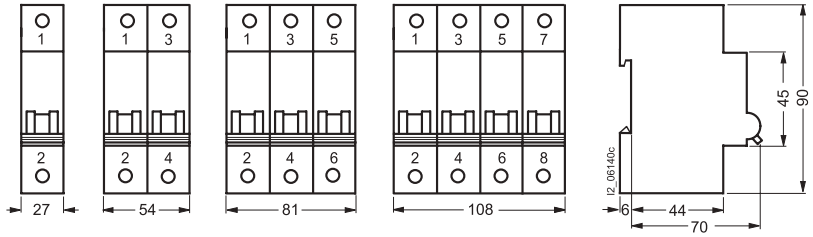
### 5SY4, 5SY5, 5SY6 supplementary protectors



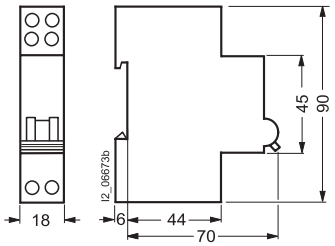
### 5ST3 auxiliary switch
### 5ST3 fault signal contact
can be used with 5SY4, 5SY5, 5SY6, 5SP4



### 5SP4 supplementary protectors



### 5ST3 shunt trip
### 5ST3 undervoltage release
can be used with
5SY4, 5SY5, 5SY6, 5SP4



# General Data

## 3NW7 Cylindrical Fuse Holders

### Key Common Features

- Meets a wide variety of fuse sizes
- Multi-pole configurations
- Standard 35 mm (DIN) rail mounting
- Housing material meets UL-94-V0, self-extinguishing
- Meets UL 512 and CSA C22.2, No. 39 certifications
- CE Mark
- No tools required for insertion or removal of fuses
- Finger safe design
- With or without Blown Fuse Indicator
- Draw design includes spare fuse holder

### Description

Depending on the cylindrical* fuse size selected 3NW7 fuse holders are available in 1, 1 + N, 2, 3, 3 + N and 4 pole configurations. Fuse sizes include 13/32" x 1-1/2" (Class CC and Midget), 8 mm x 32 mm,
10 mm x 38 mm, 14 mm x 51 mm and 22 x 58 mm.

Class CC fuse holders are UL Listed for branch circuit protection according to UL 512 and CSA C22.2, No. 39. They incorporate a rejection feature that only allows Class CC fuses to be used.

Midget, 8 mm x 32 mm, 10 mm x 38 mm, 14 mm x 51 mm, and 22 x 58 mm fuse holders are UL Recognized (refer to Technical Data for specific fuse holder certifications) as supplementary protectors according to UL 512 and CSA C22.2, No. 39. Supplementary protectors are designed to provide additional protection along with branch circuit protection devices. All fuse holders are equipped with either a fuse handle or draw mechanism for easy insertion and removal of cylindrical type fuses. During insertion and removal the fuses are isolated from the power/control circuit. Their compact size requires less space than typical open-type fuse holders and they mount directly onto standard 35 mm mounting rails.

Fuse holders for 8 mm x 32 mm, 10 mm x 38 mm fuses in the 1 + N draw design occupy the same mounting space as 1 pole designs. This unique design saves space when compared to the typical handle type fuse holder which requires two poles.

## Ordering

The 3VA breakers are shipped complete with non-interchangeable trip units and without lugs.

The 3VA41 panelboard mounted circuit breakers are shipped with aluminum load side lugs installed as standard.

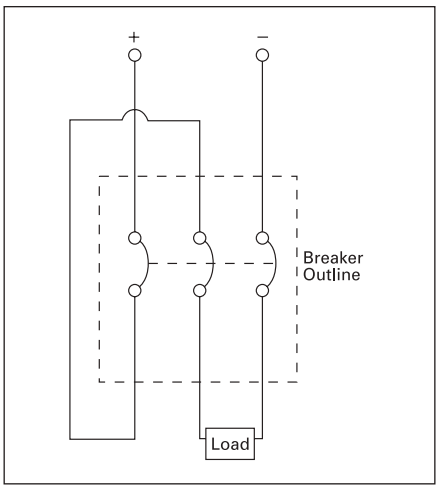
3VA51 through 3VA55 thermal-magnetic trip breakers as well as 3VA61 through 3VA66 electronic trip breakers are shipped as standard without lugs installed. To order factory installed nut keepers, which are required for installation in panelboards or switchboards, the 12th digit of the catalog should be change to "2" when ordering. (For example, a 35KA@480VAC, 40A, 3-pole, 3VA51 with lugs would be catalog number 3VA5140-5ED32-0AA0).

To order factory installed standard line and load lugs, the 12th digit of the catalog number should be changed to "6" (standard lugs are identified in the respective lug tables and footnotes in the SpeedFax). (For example, a 35KA@480VAC, 40A, 3-pole, 3VA51 with lugs would be catalog number 3VA5140-5ED3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "NAVAL", and are suitable for use at 50C.

To order NAVAL-rated thermal-magnetic trip circuit breakers, the 13th digit of the catalog number should be changed to the number "1". (For example, a 35KA @480VAC, 40A, 3-pole, NAVAL rated 3VA51 would be catalog number 3VA5140-5ED3**1**-1AA0).

All 3VA5 thermal-magnetic trip and 3VA6 electronic trip circuit breakers are UL listed for reverse feed applications.

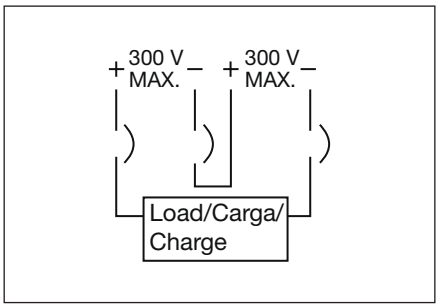


500V DC Wiring Configuration

## Connecting Breakers for DC Application

Most Siemens thermal magnetic trip MCCBs are applicable on direct current (dc) systems. Generally, for 250 V dc systems a two pole breaker is used, with one pole on each leg of the supply circuit. For three pole breakers applied on 500 V undergrounded DC systems, it is important to connect the power supply "zig-zag" through the breaker as shown in the figure below. This assures that the Voltage between phases on the breaker terminals is uniformly distributed.

See below for an alternative connection diagram. For a list of 3VA5 breakers with the DC ratings, please refer to pages 7-10 to 7-11.



# Lug-In/Lug-Out with INSTA-WIRE

## Selection

All BQ/BQH/HBQ circuit breakers are supplied with load side lugs. If line side lugs are required, add suffix "L" to catalog number. Consult Siemens for any additional charge. All standard circuit breakers are calibrated for 40°C maximum ambient application.

■ Built to order. Allow 2-3 weeks for delivery

① UL Listed for use with 60/75° wire through 40 amps, UL listed for use with 75° wire only for 50 amps and above, HACR rated.

② 1A and 1B contacts.

③ UL Listed for use on 3-phase grounded "B" systems — 10,000 for this application.

④ UL Listed for frequent switching applications (SWD). 120V AC Fluorescent Lighting.

⑤ Shipped 12 per sleeve.

⑥ Shipped 6 per sleeve.

⑦ Shipped 4 per sleeve.

⑧ UL Listed 5KA IR.

⑨ Refer to Table A on page 17/125

| 1, 2 | BQXD | 15-60 | 4½ | 2⅜ | 3 |

**For inches / millimeters conversion, see Application Data section.**

■ Built to order. Allow 2–3 weeks for delivery.

① UL Listed for use with 60/75° wire through 40 amps, UL listed for use with 75° wire only for 50 amps and above, HACR rated.

②Connector has steel construction.

③Surface mounted indoor. If flush mounting is required, replace suffix "S" in catalog number with suffix "F".

④Neutral included in enclosure.

⑤Enclosure will not accept circuit breakers with shunt trips or auxiliary switches installed.

⑥Type BQXD uses TA1Q1 or TC1Q1 lugs on line side of circuit breaker.

For external accessories, please refer to pages 17/130, 17/132 to 17/137

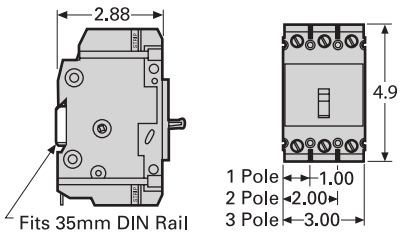
**CQD**



**CQD**

**For inches / millimeters conversion, see Application Data section.**

■ Built to order. Allow 2–3 weeks for delivery.

① SWD rated.

**Note:** CQD breakers are UL Listed for reverse feed applications.

② HID rated.

③ HACR rated.

④ Applicable for 15-30A breakers only.

For accessories, please refer to pages 17/13 and 17/132 to 17/137

# GG 125A Frame

## Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA91330QA00), change the 12th digit of the catalog number to "2". (For example, a 35KA @480VAC, 40A, 3-pole, 3VA51 with nut keepers would be catalog number 3VA5140-5ED3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 40A, 3-pole, 3VA51 with lugs would be catalog number 3VA5140-5ED3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

For NAVAL-rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "1". (For example, a 35KA @480VAC, 40A, 3-pole, NAVAL rated 3VA51 would be catalog number 3VA5140-5ED31-**1**AA0)

All 3VA51 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

① Use these lugs on 15A to 40A breakers.
② Use these lugs on 45A to 125A breakers.
③ Standard lug installed at the factory when breaker ordered with a "6" in the 12th position.

# 3VA61 150A Electronic Trip Circuit Breakers

## Selection

3VA61
150A 3-Pole

### Ordering Information

The numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA92430QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 40A, 3-pole, 3VA61 with nut keepers is catalog number 3VA6140-5HL3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 40A, 3-pole, 3VA61 with lugs is catalog number 3VA6140-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

All 3VA61 electronic trip circuit breakers are available with 100% ratings. To order, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 40A, 3-pole, 100% rated 3VA61 is catalog number 3VA6140-5HL31-**2**AA0). Requires the use of rated lugs — see lug table below.

**Note:** 100% option not available for E-interrupting class breakers.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C. They are UL listed for reverse feed applications.

## Dimensions / Shipping Weight

| Breaker | Poles | W in. (mm) | H in. (mm) | D in. (mm) | lbs. | kg |
|---|---|---|---|---|---|---|
| 3VA61 | 3 | 4.1 (105) | 7.8 (198) | 3.4 (86) | 5.5 | 2.5 |
| 3VA61 | 4 | 5.5 (140) | 7.8 (198) | 3.4 (86) | 7.1 | 3.2 |

① Meets requirements for 100% rated breakers up to 150A.
② Meets requirements for 100% rated breakers up to 100A.
③ Limited to 150A including the control wire tap.
④ Standard lug installed at the factory when breaker ordered with a "6" in the 12th position.

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers, change the 12th digit of the catalog number to "2". (For example, a 35KA @480VAC, 40A, 3-pole, 3VA52 with nut keepers would be catalog number 3VA5240-5ED3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 40A, 3-pole, 3VA51 with lugs would be catalog number 3VA5240- 5ED3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

3VA52 are available with 100% ratings (3VA52 3 and 4 pole and up to 225 amp only (250A with 100% ratings can be purchased in the 400A frame) . For 100% rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 40A, 3-pole, 100% rated 3VA52 would be catalog number 3VA5240-5ED31-**2**AA0). Requires the use of rated lugs — see lug table below.

For NAVAL-rated thermal-magnetic trip circuit breakers (3VA52 3 pole only), change the 13th digit of the catalog number to the number "1". (For example, a 35KA @480VAC, 40A, 3-pole, NAVAL rated 3VA51 would be catalog number 3VA5240-5ED31-**1**AA0)

All 3VA52 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

See page 17/60 for internal accessory part numbers.

① Standard lug installed at the factory when breaker ordered with a "6" in the 12th position.
② Meets requirements for 100% rated breakers up to 150A.
③ Meets requirements for 100% rated breakers up to 175A.
④ Meets requirements for 100% rated breakers up to 225A, requires the use of 90 degree wire, size to 75 degree ampacity.

# 3VA62 250A Electronic Trip Circuit Breakers

## Selection

3VA62 250A 3-Pole

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA92430QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 250A, 3-pole, 3VA62 with nut keepers would be catalog number 3VA6225-5HL3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 250A, 3-pole, 3VA62 with lugs would be catalog number 3VA6225-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

All 3VA62 electronic trip circuit breakers are available with 100% ratings. For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 250A, 3-pole, 100% rated 3VA62 would be catalog number 3VA6225-5HL31-**2**AA0). Requires the use of rated lugs — see lug table below.

**Note:** 100% option not available for E-interrupting class breakers.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

All 3VA62 electronic trip circuit breakers are UL listed for reverse feed applications.

**3VA53 400A 3-Pole**

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA94730QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 400A, 3-pole, 3VA53 with nut keepers would be catalog number 3VA5340-5EC3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 400A, 3-pole, 3VA53 with lugs would be catalog number 3VA5340-5EC3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

For NAVAL-rated thermal-magnetic trip circuit breakers (3 pole only), change the 13th digit of the catalog number to the number "1". (For example, a 35KA @480VAC, 400A, 3-pole, NAVAL rated 3VA53 would be catalog number 3VA5340-5EC31-**1**AA0)

3VA53 are available with 100% ratings (3 and 4 pole only). For 100% rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 400A, 3-pole, 100% rated 3VA53 would be catalog number 3VA5340-5EC31-**2**AA0). Requires the use of rated lugs — see lug table below.

All 3VA53 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

# 3VA63 400A Electronic Trip Circuit Breakers

## Selection

3VA63 400A 3-Pole

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA94730QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 400A, 3-pole, 3VA63 with nut keepers would be catalog number 3VA6340-5HL3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 400A, 3-pole, 3VA63 with lugs would be catalog number 3VA6340-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

3VA63 electronic trip circuit breakers are available with 100% ratings (up to 250A only in this frame – 400A with 100% ratings can be purchased in the 600A frame). For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 250A, 3-pole, 100% rated 3VA63 would be catalog number 3VA6325-5HL31-**2**AA0). Requires the use of rated lugs — see lug table below.

**Note:** 100% option not available for E-interrupting class breakers.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

All 3VA63 electronic trip circuit breakers are UL listed for reverse feed applications.

① 3VA63 Meets requirements for 100% rated breakers up to 250A.
② 3VA53 Meets requirements for 100% rated breakers up to 300A.
③ 3VA53 Meets requirements for 100% rated breakers up to 400A, requires the use of 90 degree wire, size to 75 degree ampacity.
④ 3VA53 Meets requirements for 100% rated breakers up to 350A, requires the use of 90 degree wire, size to 75 degree ampacity.
⑤ Standard lug installed at the factory when breaker ordered with a "6" in the 12th position.

## Enclosures for 3VA53 and 3VA63 (3-pole only)

3VA54 600A 4-Pole

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA94730QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 600A, 3-pole, 3VA54 with nut keepers would be catalog number 3VA5460-5EC3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 600A, 3-pole, 3VA54 with lugs would be catalog number 3VA5460-5EC3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

For NAVAL-rated thermal-magnetic trip circuit breakers (3 pole only), change the 13th digit of the catalog number to the number "1". (For example, a 35KA @480VAC, 600A, 3-pole, NAVAL rated 3VA54 would be catalog number 3VA5460-5EC31-**1**AA0)

All 3VA54 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

# 3VA64 600A Electronic Trip Circuit Breakers

## Selection

3VA64 600A 3-Pole

### Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers without lugs.

For factory installed nut keepers (3VA94730QA00), change the 12th digit of the catalog number to "2" (required to install a breaker in a panelboard or switchboard that has a provision). (For example, a 35KA @480VAC, 600A, 3-pole, 3VA64 with nut keepers would be catalog number 3VA6460-5HL3**2**-0AA0).

For factory installed standard line and load lugs, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 600A, 3-pole, 3VA64 with lugs would be catalog number 3VA6460-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

3VA64 electronic trip circuit breakers are available with 100% ratings (up to 400A only in this frame – 600A with 100% ratings can be purchased in the 800A frame). For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 400A, 3-pole, 100% rated 3VA64 would be catalog number 3VA6440-5HL31-**2**AA0). Requires the use of rated lugs — see lug table below.

**Note:** 100% option not available for E-interrupting class breakers.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

All 3VA64 electronic trip circuit breakers are UL listed for reverse feed applications.

① 3VA64 Meets the requirement for 100% rated breakers up to 400A.
② 3VA64 Meets requirement for 100% rated breakers up to 400A, requires the use of 90 degree wire.
⑥ Standard lug installed at the factory when breaker ordered with a "6" in the 12th position.
⑦ Standard lug installed at the factory on 400A 100% rated breaker when ordered with a "6" in the 12th position.

3VA55 800A 4-Pole

## Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers with nutkeepers on both line and load ends..

To include standard line and load lugs, shipped with the breaker for field installation, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 800A, 3-pole, 3VA55 with lugs would be catalog number 3VA5580-5EC3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

For NAVAL-rated (3-pole only) thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "1". (For example, a 35KA @480VAC, 800A, 3-pole, NAVAL rated 3VA55 would be catalog number 3VA5580-5EC32-**1**AA0)

3VA55 are available with 100% rating (only 3 and 4 pole). For 100% rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 800A, 3-pole, 100% rated 3VA55 would be catalog number 3VA5580-5EC32-**2**AA0). Requires the use of rated lugs.

All 3VA55 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

# 3VA65 800A Electronic Trip Circuit Breakers

**3VA65 800A 3-Pole**

## Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers with nutkeepers on both line and load ends.

To include standard line and load lugs, shipped with the breaker for field installation, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 800A, 3-pole, 3VA65 with lugs would be catalog number 3VA6580-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

3VA65 electronic trip circuit breakers are available with 100% ratings. For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 600A, 3-pole, 100% rated 3VA65 would be catalog number 3VA6560-5HL32-**2**AA0). Requires the use of rated lugs — see lug table below.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

All 3VA65 electronic trip circuit breakers are UL listed for reverse feed applications.

① 3VA55 and 3VA65 Meets requirements for 100% rated breakers up to 600A.
② 3VA55 Meets requirements for 100% rated breakers up to 700A, requires the use of 90 degree wire, size to 75 degree ampacity.
③ 3VA55 and 3VA65 Meets requirements for 100% rated breakers up to 800A, requires the use of 90 degree wire, size to 75 degree ampacity.
④ Standard lug for the 600A and 700A 3VA55 and the 600A 3VA65 will be installed at the factory when the breaker is ordered with a "6" in the 12th position.
⑤ Standard lug for the 800A 3VA55/65 and the 1000A 3VA66 will ship with the breaker from the factory for field installation when the breaker is ordered with a "6" in the 12th position.
⑥ 3VA65 Meets requirements for 100% rated breakers up to 600A.

# 3VA66 1000A Electronic Trip Circuit Breakers

3VA66 1000A 3-Pole

## Ordering Information

The catalog numbers listed here are for complete, non-interchangeable trip circuit breakers with nutkeepers on both line and load ends.

To include standard line and load lugs, shipped with the breaker for field installation, change the 12th digit to "6" (standard lugs are identified in the lug table and footnotes in this section of the SpeedFax). (For example, a 35KA @480VAC, 1000A, 3-pole, 3VA66 with lugs would be catalog number 3VA6610-5HL3**6**-0AA0). Alternate connectors can be ordered separately for field installation.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

All 3VA66 electronic trip circuit breakers are UL listed for reverse feed applications.

| 3R | 3VA12003R |
| Neutral | HN68A |

### Ordering Information

The catalog numbers listed here are for complete, non-interchangable trip circuit breakers without lugs. Order required lugs or connection technology separately for field installation.

All 3VA57 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

For NAVAL rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "1". (For example, a 35KA@480VAC, 1200A, 3-pole, rated 3VA57 would be catalog number 3VA5712-5EC31-**1**AA0)

All 3VA57 thermal-magnetic trip circuit breakers can be ordered 100% rated. For 100% rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA@480VAC, 1200A, 3-pole, rated 3VA57 would be catalog number 3VA5712-5EC31-**2**AA0)

[1] Available with NAVAL/50C ratings.

# 3VA67 1200A Electronic Trip Circuit Breakers

## Selection

3VA67 1200A 3-Pole

### Ordering Information

The catalog numbers listed below are for complete, non-interchangable trip circuit breakers without lugs.

All 3VA67 electronict trip circuit breakers are UL listed for reverse feed applications.

3VA67 electronic trip circuit breakers are available with 100% ratings. For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 1200A, 3-pole, 100% rated 3VA67 would be catalog number 3VA6712-5HL31-**2**AA0). See lug table below.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

## Connections for 75C wire for 3VA57 and 3VA67

| Type | Minimum cable size | Maximum cable size | Part Number (kit of 2 lugs) | Part Number (kit of 3 lugs) | Mount Lugs to Essential Parts |
|---|---|---|---|---|---|
| TA6.1 Aluminum body lug, 3 cables (Cu/Al cable) with 1 extended terminal cover | 500 kcmil | 750 kcmil | **3VA9772-0JJ34**② | **3VA9773-0JJ34**② | |
| TA6.2 Aluminum body lug, 4 cables (Cu/Al cable) with 1 extended terminal cover | 1/0 | 500 kcmil | **3VA9772-0JJ43** | **3VA9773-0JJ43** | |
| TA6.2 Aluminum body lug with CVT, 4 cables (Cu/Al cable) with control wire tap and 1 extended terminal cover | 1/0 | 500 kcmil | — | **3VA9773-0JC43** | |
| TA6.3 Aluminum body lug, 4 cables (Cu/Al cable) with 1 extended terminal cover, 100% rated | 1/0 | 500 kcmil | — | **3VA9773-0JM43**② | |
| TC6.2 Copper body lug (Cu cable only) 4 cable lugs | 1/0 | 500 kcmil | — | **3VA9773-0JE43**② | |
| TA7.1 Aluminum body lug, 6 cables (Cu/Al cable) for lug mounting assembly | 1/0 | 750 kcmil | — | **3VA9773-0JJ64**②③ | **3VA9873-0WL00** |
| CL1.7 Compression lug, 12 pcs, 4 per phase line or load (Cu/Al cable),with extended terminal cover | 1/0 | 500 kcmil | — | **3VA9773-0QK01** | |

② Meets requirements for 100% rated breakers up to 1200A, requires the use of 90 degree wire, size to 75 degree ampacity.
③ Lugs Require Attachment to 3VA9873-0WL00 LMAP (Sold Separately).

For specific trip settings refer to the Electronic Trip Unit section of the 3VA Systems Manual

| C | CPAS | 200 | 100 | 100 | 65 | 65 | 100 | 100 | 100 |

**3VA58 1600A 3-Pole**

### Ordering Information

The catalog numbers listed here are for 3VA58 1600A thermal-magnetic trip circuit breakers only. Order required mounting arrangement and necessary terminal connections as separate items.

All 3VA58 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

For NAVAL rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "1". (For example, a 35KA@480VAC, 1600A, 3-pole, rated 3VA58 would be catalog number 3VA5816-5EC31-**1**AA0).

All 3VA58 thermal-magnetic trip circuit breakers can be ordered 100% rated. For 100% rated thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA@480VAC, 1600A, 3-pole, rated 3VA58 would be catalog number 3VA5816-5EC31-**2**AA0).

# 3VA68 1600A Electronic Trip Circuit Breakers

## Selection

3VA68 1600A 3-Pole

### Ordering Information

The catalog numbers listed below are for 3VA68 1600A Electronic trip circuit breakers only. Order required mounting arrangement and necessary terminal connectors as separate items.

All 3VA68 electronict trip circuit breakers are UL listed for reverse feed applications.

3VA68 electronic trip circuit breakers are available with 100% ratings. For 100% rated electronic trip circuit breakers, change the 13th digit of the catalog number to the number "2". (For example, a 35KA @480VAC, 1600A, 3-pole, 100% rated 3VA68 would be catalog number 3VA6816-5HL31-**2**AA0) Requires the use of copper lugs — see lug table below.

All 3VA6 circuit breakers are certified to UL 489 Supplement SB, are marked "Naval", and are suitable for use at 50C.

## 3VA68 1600A, 3-pole Frame, Electronic Trip Unit

## Connections for 75C wire for 3VA58 and 3VA68

| Type | Minimum cable size | Maximum cable size | Part Number (kit of 1 lug) | Part Number (kit of 3 lugs) | Mount Lugs to Essential Parts |
|---|---|---|---|---|---|
| TA7.2 Aluminum body lug, 4 cables (Cu/Al cable) for mounting base front connection | 600 kcmil | 750 kcmil | **3VA9771-0JJ44**③④ | — | **3VA9873-0WM00 + 3VA9872-0WA00** |
| TA7.2 Aluminum body lug, 4 cables (Cu/Al cable) for mounting base rear connection | 600 kcmil | 750 kcmil | **3VA9771-0JJ44**③⑤ | — | **3VA9873-0WN00** |
| TA7.3 Aluminum body lug, 5 cables (Cu/Al cable) for mounting base front connection | 300 kcmil | 600 kcmil | **3VA9771-0JJ53**③④ | — | **3VA9873-0WM00 + 3VA9872-0WA00** |
| TA7.3 Aluminum body lug, 5 cables (Cu/Al cable) for mounting base rear connection | 300 kcmil | 600 kcmil | **3VA9771-0JJ53**③⑤ | — | **3VA9873-0WN00** |
| TA7.4 Aluminum body lug, 6 cables (Cu/Al cable) for mounting base front connection | 300 kcmil | 600 kcmil | **3VA9871-0JJ63**③④ | — | **3VA9873-0WM00 + 3VA9872-0WA00** |
| TC7.3 Copper body lug, 5 cables (Cu cable only) for mounting base front connection | 300 kcmil | 600 kcmil | **3VA9871-0JE53**①③④ | — | **3VA9873-0WM00 + 3VA9872-0WA00** |
| TC7.3 Copper body lug, 5 cables (Cu cable only) for mounting base rear connection | 300 kcmil | 600 kcmil | **3VA9871-0JE53**①③⑤ | — | **3VA9873-0WN00** |
| TA7.1 Aluminum body lug, 6 cables (Cu/Al cable) for lug mounting assembly | 1/0 | 750 kcmil | — | **3VA9773-0JJ64**①② | **3VA9873-0WL00** |

① Meets requirements for 100% rated breakers up to 1600A, requires the use of 90 degree wire, size to 75 degree ampacity.
② Lugs Require Attachment to 3VA9873-0WL00 LMAP (Sold Separately).
③ Part Number is for kit of 1 lug. Requires customer to purchase Qty. of 3x (kit of 1 lug).
④ Mounting Base Front Connection Requires Lugs to be installed on 3VA9873-0WM00 MBFC (Sold Separately) + 3VA9872-0WA00 Phase Barriers (Sold Separately).
⑤ Mounting Base Rear Connection Requires Lugs to be installed on 3VA9873-0WN00 MBRC (Sold Separately).

## Trip Settings for 3VA68

### ETU320-LI, ETU330-LIG, ETU350-LSI, ETU360-LSIG

| Cont. Amp | LI, LIG, LSI, LSIG | | | LSI, LSIG | | LIG, LSIG | |
|---|---|---|---|---|---|---|---|
| $I_n$ (Amp) | $I_r$(Amp) (L) | $t_{ld}$ (sec) (L) | $I_i$ (Amp)⑥ (I) | $I_{sd}$= xIr (Amp) (S) | $t_{sd}$ (sec) (S) | $I_g$ (Amp) (G) | $t_g$ (sec) (S) |
| 1600 | 600–1600 | 2.5 - 30 | 2400–12000 | 1.5–10 | 0 - 0.4 | 250–1600 | 0.1 / 0.3 |

⑥ $I_i$ for ETU350 is fixed at the maximum level shown in table.

### ETU850-LSI, ETU856 LSI(A), ETU860-LSIG

| H | HRAS | 100 | 65 | 65 | 35 | 35 | 85 | 85 | 85 |
| C | CRAS | 200 | 100 | 100 | 65 | 65 | 100 | 100 | 100 |

## Ordering Information

The catalog numbers listed here are for 3VA59 2000A thermal-magnetic trip circuit breakers only. Order required mounting base assembly and necessary terminal connections as separate items.

All 3VA59 thermal-magnetic trip circuit breakers are UL listed for reverse feed applications.

For NAVAL rated (3-pole only) thermal-magnetic trip circuit breakers, change the 13th digit of the catalog number to the number "1". (For example, a 35KA@480VAC, 2000A, 3-pole, rated 3VA59 would be catalog number 3VA5920-5EC31-**1**AA0)

# 3VA69 2000A Electronic Trip Circuit Breakers

## 3VA69 2000A, 3-pole Frame, Electronic Trip Unit

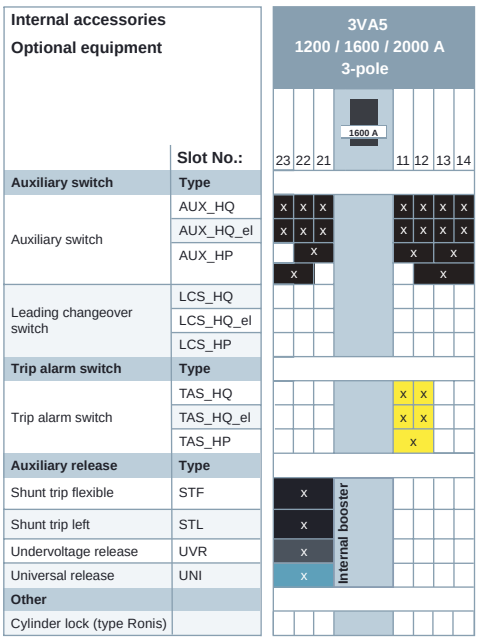
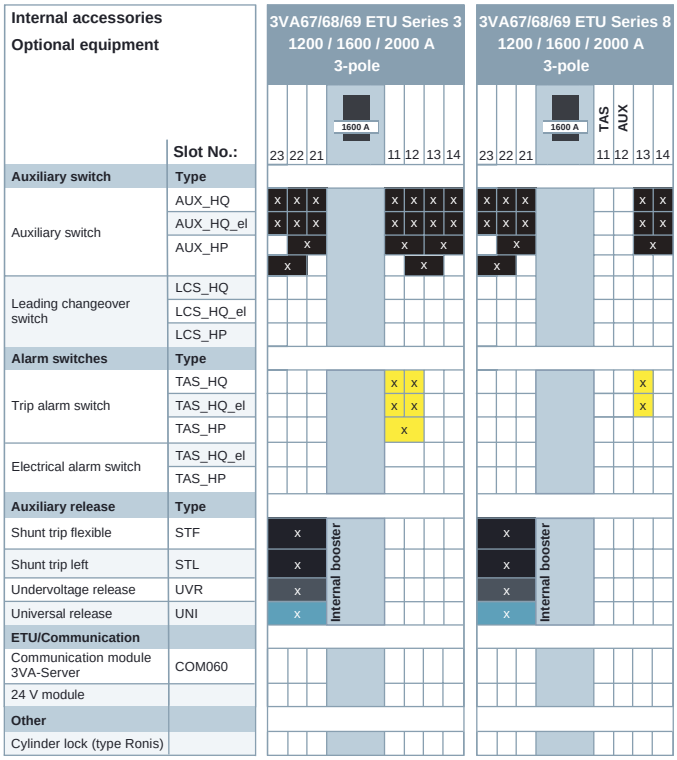
## Time-delay Device for Undervoltage Release

| Type | VAC 50/60 Hz | VDC | Delay Time | Catalog Number |
|---|---|---|---|---|
| Time-delay Device (mounted external to circuit breaker) | 230 | 230 | Fixed – 100ms min. | **3VA9978-0BF22** |
| | — | 24 | Fixed – 100ms min. | **3VA9978-0BF23** |





[1] Refer to pages 17/89 and 17/90 for internal accessory electrical requirements.

[2] Shunt trip flexible can be used in the left pocket of the 3VA5 breakers. They can be used in the left or right pocket of the 3VA6 breakers.

# 3VA Molded Case Switch and Motor Circuit Protector

## Ordering Information

Breaking capacity (the SCCR rating) is the maximum permissible short circuit current at the installation location of the MCS in combination with an appropriate overload protective device.

For factory installed nut keepers for molded case switches and motor circuit protectors, change the 12th digit of the catalog number to "2" (required for panelboard or switchboard installation).

For factory installed standard lugs, change the 12th digit to "6" (standard lugs are identified in the lug table in the accessory section of the SpeedFax). Alternate connection technology need to be ordered separately for field installation.

**Note:** Factory installed nut keepers and lugs are only available for 3 Pole breakers.

**Magnetic switch**

**Electronic Trip Unit switch**

**Motor Circuit Protector**

① Rated at 600 Y/347 V AC.
② SCCR is 100kA at 480 V. SCCR rating is the maximum permissible short circuit current of the MCP in combination with an appropriate overload protection device.
③ SCCR is 65kA at 480 V. SCCR rating is the maximum permissible short circuit current of the MCP in combination with an appropriate overload protection device.

|---|---|---|---|---|
| Time-delay Device (mounted external to circuit breaker) | 230 | 230 | Fixed – 100ms minimum | 3VA9978-0BF22 |
| | — | 24 | Fixed – 100ms minimum | 3VA9978-0BF23 |

**Auxiliary switches and alarm switches HQ**

**Auxiliary switches and alarm switches HP**

**Shunt trip left STL**

**Undervoltage releases UVR**

**Universal release UNI**

**Time-delay device for undervoltage releases**

① Use only with 3VA6.
② Shunt trip flexible can be used in the left pocket of the 3VA5 breakers. They can be used in the left or right pocket of the 3VA6 breakers.
③ Refer to pages 17/89 and 17/90 for internal accessory electrical requirements.
④ HQ: One conductor per contact point, max. 300 V AC, max. 6 A
⑤ HP: Two conductors per contact point possible (two screw terminals support one internal contact point), max. 600 V; max. 10 A

① This conductor is ampere-rated at 380A with copper wire and 310A with aluminum wire.
② Meets requirements of 100% rated breakers up to 150A.
③ Use these lugs on 15A to 40A breakers.
④ Use these lugs on 45A to 125A breakers.

### Breaker data server

| | Type | Part Number |
|---|---|---|
| | COM800 breaker data server<br>▪ 2 terminating resistors<br>▪ Central communication module for connecting up to eight 3VA6 molded case circuit breakers via the 3VA-line<br>▪ Ethernet 10/100 Mbit/s interface<br>▪ Communication via Ethernet (Modbus TCP)<br>▪ Module slot for plugging on an optional PROFIBUS DP, PROFINET or RS485 module | **3VA9977-0TA10** |
| | COM100 breaker data server<br>▪ 2 terminating resistors<br>▪ Central communication module for connecting one 3VA6 molded case circuit breaker<br>▪ Ethernet 10/100 Mbit/s interface<br>▪ Communication via Ethernet (Modbus TCP)<br>▪ Module slot for plugging on an optional PROFIBUS DP, PROFINET or RS485 module | **3VA9977-0TA20** |
| | 7KM PAC PROFIBUS DP expansion module<br>▪ The 7KM PAC PROFIBUS DP expansion module is used for connecting the COM800/COM100 breaker data server, and the 3VA molded case circuit breakers conneccted to it, to PROFIBUS DPV1<br>▪ The 7KM PAC PROFIBUS DP expansion module provides the status and measured quantities of the 3VA molded case circuit breaker for the PROFIBUS DP master. It receives information (e.g. commands) from the PROFIBUS DP master, and forwards this information to the 3VA molded case circuit breaker | **7KM9300-0AB01-0AA0** |
| | 7KM PAC Switched Ethernet PROFINET expansion module<br>▪ The 7KM PAC Switched Ethernet PROFINET expansion module is used to connect the COM800/COM100 breaker data server, and the connected 3VA molded case circuit breaker, to PROFINET via two Ethernet interfaces<br>▪ The 7KM PAC Switched Ethernet PROFINET expansion module provides the status and measured quantities of the 3VA molded case circuit breaker to PROFINET via the PROFINET IO, PROFIenergy and Modbus TCP protocols | **7KM9300-0AE01-0AA0** |
| | 7KM PAC RS485 Modbus RTU expansion module<br>▪ The 7KM PAC RS485 Modbus expansion module is used to connect the COM800/COM100 breaker data server, and the 3VA molded case circuit breaker connected to it, to Modbus RTU<br>▪ The 7KM PAC RS485 Modbus expansion module provides the status and measured quantities of the 3VA molded case circuit breaker for the Modbus RTU master. It receives information (e.g. commands) from the Modbus RTU master, and forwards this information to the 3VA molded case circuit breaker | **7KM9300-0AM00-0AA0** |

# 3VA Communication and Testing/Commissioning Devices

## Accessories for Communication

| | Type | Part Number |
|---|---|---|
| | T-Connector<br>▪ Spare part<br>▪ Provides spur line feeder to COM060 and loops to the nextcircuit breaker<br>▪ Includes a connection adapter for mounting on the 3VA6 breaker enclosure | **3VA9987-0TG10** |
| | DIN rail adapter<br>For snapping the T-Connector onto a DIN rail | **3VA9987-0TG11** |
| | Preassembled T-Connector-to-T-Connector or<br>T-Connector-to-COM800/ COM100 connecting cable<br>▪ 0.4 m long | **3VA9987-0TC10** |
| | ▪ 1 m long | **3VA9987-0TC20** |
| | ▪ 2 m long | **3VA9987-0TC30** |
| | ▪ 4 m long | **3VA9987-0TC40** |
| | Preassembled connecting cable for extending the<br>COM060-to-T-Connector spur line connection<br>▪ 0.4 m long | **3VA9987-0TF20** |
| | ▪ 0.8 m long | **3VA9987-0TF10** |
| | Additional bus terminating resistors | **3VA9987-0TE10** |
| | Voltage tap to external N conductor<br>Cable for connecting the neutral point for the metering function of the<br>8-Series ETU, length 1.5 m | **3VA9987-0UC10** |
| | External current transformer. Connection of an external current transformer for the<br>N conductor for 3-pole 3VA6 molded case circuit breakers for 3-series①, 5-series, and<br>8-series ETUs, including connecting cable<br>▪ 3VA61 | **3VA9077-0NA10** |
| | ▪ 3VA62 | **3VA9177-0NA10** |
| | ▪ 3VA63/64 | **3VA9377-0NA10** |
| | ▪ 3VA65/66/67 | **3VA9677-0NA10** |
| | ▪ 3VA68/69 | **3VA9877-0NA10** |
| | DSP800 display<br>▪ For displaying the status, measured values and parameters of up to 8<br>3VA6 molded cases circuit breakers<br>▪ Connection to the COM800/COM100 via Ethernet for displaying information<br>of the COM800/COM100 and the connected 3VA6 molded case circuit breaker | **3VA9977-0TD10** |
| | EFB300<br>▪ External function box for connection to the ETU of the 3VA6 molded case circuit breaker<br>▪ 4 digital outputs for information output, 1 digital input<br>▪ ZSI functionality<br>▪ S0 interface<br>▪ Including cable 1.5 m in length | **3VA9977-0UA10** |
| | Connecting cable for EFB300 and MMB300. Spare part<br>▪ 1.5 m long | **3VA9987-0UB10** |
| | ▪ 3.0 m long | **3VA9987-0UB20** |
| | ▪ 3.0 m long for 3VA with EFB and RCD820 | **3VA9987-0UB30** |

## Test devices

| | Type | Part Number |
|---|---|---|
| | TD300<br>▪ Connection to the front interface of the ETU<br>▪ Test device for activating the ETU and triggering a test trip | **3VA9977-0MA10** |
| | TD500<br>▪ Connection to the front interface of the ETU<br>▪ Initiation of various test trips (LSING)<br>▪ USB interface for connection of a PC using powerconfig<br>▪ ETU parameterization<br>▪ Including external power supply unit with adapter for Europe, UL and GB<br>▪ Including connecting cable to the 3VA6 molded case circuit breaker | **3VA9977-0MB10** |
| | Spare part: External power supply for TD500<br>110 ... 240 V AC | **3VA9987-0MX10** |
| | Spare part: Cable for connecting to the TD500 to the 3VA6 molded case circuit breaker | **3VA9977-0MY10** |

## Maintenance Mode Box

| | | |
|---|---|---|
| | MMB300<br>▪ Realization of the NEC 240.87 (Arc Energy Reduction) -> personal protection during maintenance work<br>▪ Switch into maintenance mode by changing the I- and G-protection to the lowest possible value through an external signal (e.g. door contact)<br>▪ Available for all 3VA6 circuit breakers with electronic trip unit<br>▪ Daisy chain up to 8 circuit breakers equipped with MMB300<br>▪ Additional digital output (D01) for ETU signals available<br>▪ Capable of DIN rail mounting<br>▪ Includes cable 1.5m in length | **3VA9977-0UF10** |

| | Labeling plate for cover frame | | | | | | | 3VA9087-0SX10 |

① 2 mounting plates are required. They are screwed onto the profile rail that can be ordered above. Different breakers can be mutually interlocked.

② Breakers with plug-in unit can be mounted on the mounting plates, but the profile rails cannot be used.

Applies to MCCBs in line protection and MCS (if protected by a suitable overcurrent protection device).

With an non-grounded system, all poles must disconnect such that the load is isolated when switched off.

The grounded pole must always be assigned to the individual conducting path, so that in the event of a ground fault there are always 2 conducting paths in series in a circuit with 3-pole molded case circuit breakers, and 3 conducting paths in series in a circuit with 4-pole molded case circuit breakers.

Additional wiring configurations are available on request.

GF ground fault monitoring
① Minus pole grounded
② Also covers 1-pole circuit breaker in 2-pole frame

# Catalog Numbering System

If used on 250A frame and above means non-interchangeable trip breaker with factory assembled frame and trip. Solid state trip and current limiting (S or C in first character) are non-interchangeable only, and the "X" is omitted.

**Trip Unit Type**
□ — Omitted – Thermal-Magnetic
S — Sensitrip® Electronic Trip (obsolete)

**Sentron Series Type/Interrupting Range**
□ — Omitted – Standard Rating
H — High IC Rating
HH — Extra High IC Rating
C — Highest IC Rating and Current Limiting

**Frame Identifier**
E — Type ED
F — Type FD
J — Type JD
L — Type LD
LM — Type LMD
M — Type MD
N — Type ND
P — Type PD
R — Type RD

**Maximum Voltage**
2 — 240 Vac
4 — 480 Vac
6 — 600 Vac

**Number of Poles**
1
2
3
A — used to indicate advanced electronic trip unit with maintenance mode capability (always 3 poles)
B — used to indicate basic electronic trip unit (always 3 poles)

**(Specific Application Type)**
B — Standard 40°C Breaker
M — Calibrated for 50°C Application
F — Frame Only
T — 40°C Trip Unit Only
W — 50°C Trip Unit Only
S — Molded Case Switch
L — Low Instantaneous Range ETI Breaker
A — Standard Range ETI Breaker
H — High Instantaneous Range ETI Breaker

**Maximum Continuous Current Rating**
ED Frame — 015, 020, 025, 030, 035, 040, 045, 050, 060, 070, 080, 090, 100, 110, 125
FD Frame — 070, 080, 090, 100, 110, 125, 150, 175, 200, 225, 250
JD Frame — 200, 225, 250, 300, 350, 400
LD Frame — 250, 300, 350, 400, 450, 500, 600
LMD Frame — 500, 600, 700, 800
MD Frame — 500, 600, 700, 800
ND Frame — 900, 100 (1000A), 120 (1200A)
PD Frame — 120 (1200A), 140 (1400A), 160 (1600A)
RD Frame — 160 (1600A), 180 (1800A), 200 (2000A)

**Suffix**
L — where applicable indicates a breaker shipped with line/loads lugs installed
A — used with a switch to show automatic self protection
Y — 400 Hertz
H — 100% rated
P — Load side lugs only
NAV — Naval Ratings

NOTE:

□ — Position omitted if not used.

## Ordering Instructions

- All ED Frame Sentron circuit breakers are supplied with load side lugs. If line side lugs are required, add "L" suffix to catalog number. Consult Siemens sales office for any addditional charge
- 50°C Calibration, 400HZ - see page 17/128. All ED frame circuit breakers may be reverse connected

**Note:** ED frame circuit breakers qualified to UL 489 Supplement SB "Naval"— See page 17/128 for additional information

■ Built to order. Allow 2–3 weeks for delivery.

①CSA Certified only (Not UL)

②For CED types and all 110–125 ampere ED frames.

③See **Note: A,** page 17/125.

④SWD rated.

⑤HACR rated.

⑥Not for use with HHED6 breakers.

■ Built to order. Allow 2–3 weeks for delivery.

①SWD rated.

②When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

③ED6-ETI, CED6-ETI, see page 7-158 for ordering information.

④Single Pole 15-30A 30KA @ 347V non-UL. 35-100A 18KA @ 347V non-UL.

⑤HACR rated.

⑥HHED63B015A is rated 18KAIC at 600/347V.

⑦600VDC only applies to ED63D___ breakers

## Accessories for:

**ED 125A Frame**

## Combinations

Available only when ordered together. Only one module can be added to a breaker. Additional accessories, which always attach to the left pole, cannot be added to the combination later. Adds 1 inch pole space.

## Equipment Ground Sensing

A field addable kit containing 30mA or 5 mA ground fault accessory module, current transformer with 24 inch leads, and current transformer mounting equipment. Current transformer to mount in gutter of lighting panel or any control panel. Accessory module operates from separate 120V control power source.

Both 30MA and 5MA devices are equipment protection devices only. Do not use for personnel protection.

**GF01ED60**

See page 17/128 for additional information.

## Ordering Information

**Complete Breaker Unassembled with Lugs**

Prices of FD6, HFD6, and HHFD6 breakers includes frame, trip and both line and load lugs (TA1FD350A). When ordered by these catalog numbers, the customer will receive the frame, trip, and lugs separately packaged. For applications requiring different lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**

Prices of FXD6, HFXD6, HHFXD6, and CFD6 includes frame with non-interchangeable trip unit installed only. Order required lugs separately. For line and load lugs (TA1FD350A) installed, add suffix "L" to catalog number (add 2 times list price of lugs for each pole).

**50°C Applications** see page 17/128.

**400 Hz Applications** see page 17/128.

## Lugs For 75°C Wire⑤

| Catalog Number | Wire Range |

■ Built to order. Allow 2–3 weeks for delivery.

① When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

② For non-interchangeable trip 3-pole HFD6 type circuit breaker, change prefix identifier from HFD6 to HFXD6. Price equals frame and trip prices combined, e.g. price of HFXD63B250 equals price of HFD63F250 plus price of FD63T250. Order lugs separately.

③ Type HFXD6, HHFXD6, CFD6 are UL Listed for reverse feed applications.

④ FXD6, ETI, CFD6, ETI — See page 7-158 for ordering information.

⑤ HACR rated.

■ Built to order. Allow 2–3 weeks for delivery.

①Type JXD2 and JXD6 circuit breakers are UL Listed for reverse feed applications.

②When wired as shown on page 17/6, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS systems only.

③See **Note: A**, page 17/125.

④ HACR rated.

⑤ Only applicable to non-interchangeable trip unit types: JXD6-A, HJXD6-A.

**Note:** JD frame qualified to UL489 supplement B "NAVAL." See page 17/128 for additional information.

## Ordering Information

**Complete Breaker Unassembled with Lugs**

Prices of JD6, HJD6, and HHJD6 breakers include frame, trip and both line and load lugs (TA2J6500). When ordered by these catalog numbers, the customer will receive the frame, trip, and lugs separately packaged. For applications requiring different lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**

Prices of JXD6, HJXD6, HHJXD6, and CJD6 include frame with non-interchangeable trip unit installed only. Order required lugs separately. For line and load lugs (TA2J6500) installed, add suffix "L" to catalog number (add 2 times list price of lugs for each pole).

**100% Rated (3-pole only)**

Types JXD6 and HJXD6 breakers are available with 100% ratings. To order add suffix "H" to catalog number, and 10% to list price.■ 100% rated JD breakers require the use of 90°C Cu cable sized at 75°C ampacity and lugs TC1J6600 or TC2J6500.

**50°C Applications** see page 17/128.

**400Hz Applications** see page 17/128.

■ Built to order. Allow 2–3 weeks for delivery.

2-pole units available in 3-pole construction.

① When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

② For non-interchangeable 3-pole HJD6 or HHJD6 type circuit breaker change the prefix identifier to HJXD6 or HHJXD6. Price equals price of frame plus price of trip, e.g. price of HJXD63B400 equals price of HJD63F400 plus price of JD63T400. Order lugs separately.

③ JXD6-ETI, CJD6-ETI see page 7-158 for ordering information.

④ Type HJXD6, HHJXD6 Circuit Breakers are UL listed for reverse fed applications.

⑤ CE applies to non-interchangeable type HJXD6-A only.

⑥ HACR rated.

①Type LXD6A circuit breakers are UL Listed for reverse fed applications.
②When wired as shown on page 17/6, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS systems only.
③See **Note: A**, page 17/125.
④HACR rated.
⑤Only applicable to non-interchangeable trip unit types: LXD6, HLXD6.

**Note:** LD frame qualified to UL489 supplement SB "NAVAL". See page 17/128 for additional information.

Modifications page 17/128
For accessories, please refer to pages 17/104 and 17/132 to 17/137

## Ordering Information

**Complete Breaker Unassembled with Lugs**
Prices of LD6, HLD6, and HHLD6 breakers include frame, trip, and both line and load lugs (TA2J6500). When ordered by these catalog numbers, the customer will receive the frame, trip and lugs separately packaged. For applications requiring different lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**
Prices of LXD6, HLXD6, HHLXD6, and CLD6 include frame with non-interchangeable trip unit installed only. Order required lugs separately. For line and load lugs (TA2J6500) installed, add suffix "L" to catalog number (add 2 times list price of lugs for each pole).

**100% Rated (3-pole only)**
Types LXD6 and HLXD6 breakers are available with 100% ratings. To order add suffix "H" to catalog number, and 10% to list price. 100% rated LD breakers require the use of 90°C Cu cable sized at 75°C ampacity and lugs TC1J6600 or TC2J6500.

**50°C Applications** see page 17/128.

**400Hz Applications** see page 17/128.

■ Built to order. Allow 2–3 weeks for delivery.

① When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

② For complete assembled 3-pole HLD6 or HHLD6 type circuit breaker change the prefix identifier HLD6 or HHLD6 to HLXD6 or HHLXD6. Price is sum of frame and trip units prices, e.g. price of HLXD63B400 is the price of HLD63F600 plus the price of LD63T600. Order the terminal connectors separately.

③ Type HLXD6, HHLXD6, & CLD6 Circuit Breakers are UL Listed for reverse feed applications.

④ LXD6-ETI, CLD6-ETI see page 7-158 for ordering information.

⑤ CE Applies to non-interchangeable type HLXD only.

⑥ HACR rated.

## Lugs③ for 75°C Wire

| Catalog Number | Cables per Lug | Wire Range |
|---|---|---|
| TA2K500 | 1, 2 | #1-500 kcmil Cu/Al |
| TA3K500 | 1-3 | #1/0-500 kcmil Cu/Al |
| TA2N750 | 1, 2 | 500-750 kcmil Cu/Al |

■ Built to order. Allow 2–3 weeks for delivery.

① LMXD6 circuit breakers are UL Listed for reverse connected applications.

② When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

③ See **Note: A**, page 17/125.

④ HACR rated.

Modifications page 17/128
For accessories, please refer to pages 17/107 and 17/132 to 17/137

①MXD6 circuit breakers are UL Listed for reverse connection applications.
②2-pole units available in 3-pole width only.
③ When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.
④ See **Note: A**, page 17/125.
⑤ 80% rated breakers with the CE mark will also be marked in the 100% rated version.
⑥ HACR rated.
**Note:** MD frame qualified to UL489 supplement B "NAVAL". See page 17/128 for additional information.

## Ordering Information

**Complete Breaker Unassembled with Lugs**
Pricing information for MD6 and HMD6 breakers includes frame, trip, and both line and load lugs (TA3K500). When ordered by these catalog numbers, the customer will receive the frame, trip and lugs separately packaged. For applications requiring different lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**
Prices of MXD6, HMXD6 and CMD6 include frame with non-interchangeable trip units installed only. Order required lugs separately. For line and load lugs (TA3K500) installed, add suffix "L" to catalog number (add 2 times list price of lugs for each pole).

**100% Rated⑤ 3-Pole Only**
Types MXD6, HMXD6 and CMD6 breakers are available with 100% ratings. To order add suffix "H" to catalog number, and 10% to list price. 100% rated MD breakers require the use of 90°C cable sized at 75°C ampacity and lugs 3TA4P8500 or 3TA2N8750.

**50°C Applications** see page 17/128.

**400Hz Applications** see page 17/128.

①NXD6 circuit breakers are UL listed for reverse connection applications.
②2-pole units available in 3-pole width only.
③When wired as shown on page 17/6, this circuit breaker is UL listed and rated for use on 500VDC ungrounded UPS systems only.
④Use 2 – 3TA4P8500 kits for 3-pole, or 2 – 2TA4P8500 kits for 2-pole. Rated for 90° C cable. Use for 100% rated breakers.
⑤Use 2 – 3TA4N8500 for 3-pole or 2 – 2TA4N8500 for 2-pole. Rated for 75°C cable.
⑥See **Note: A**, page 17/125.
⑦80% rated breakers with the CE mark will also be marked in the 100% rated version.
⑧HACR rated.
⑨ Only applicable to non-interchangeable trip unit types: NXD6, HNXD6.

**Note:** ND frame qualified to UL489 supplement B "NAVAL". See page 17/128 for additional information.

## Ordering Information

**Complete Breaker Unassembled with Lugs**
Prices of ND6 and HND6 breakers include frame, trip, and both line and load lugs (3TA4N8500). These catalog numbers are the frame, trip and lugs separately packaged. For applications requiring different lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**
Prices of NXD6, HNXD6, and CND6 include frame with non-interchangeable trip units installed only. Order required terminal connectors separately. For line and load lugs (3TA4N8500) installed, add suffix "L" to catalog number (add 2 times list price of lug kit).

**100% Rated (3-Pole only)⑦**
Types NXD6, HNXD6 and CND6 breakers are available with 100% ratings. To order, add suffix "H" to catalog number, and add 10% to list price. 100% rated ND breakers require 90°C cable sized at 75°C ampacity and lug kit 3TA4P8500 or 3TA3N8750.

**50°C Applications** see page 17/128.

**400Hz Applications** see page 17/128.

| with NDTS lug shield | 9 | 24 | 6 | 8.25 |

**For inches / millimeters conversion, see Application Data section.**

■ Built to order. Allow 2–3 weeks for delivery.

①HNXD6 and CND6 circuit breakers are UL Listed for reverse connection applications.

②2-pole units available in 3-pole width only.

③When the power is connected in a "zig-zag" through the breaker, this circuit breaker is UL listed and rated for use on 500V DC ungrounded UPS system.

④HACR rated.

## Accessories for:

**MD/SMD 800A Frame**
**ND/SND 1200A Frame**
**PD/SPD 1600A Frame**
**RD 2000A Frame**

**S01MN6**

Accessory modules can mount in either left hand or right hand poles of all circuit breakers, including solid state. Exception: when mechanical interlock is used. Accessories cannot be mounted in left pole.

⑤HACR rated.

**Note:** PD frame qualified to UL489 supplement B "NAVAL". See page 17/128 for additional information.

### Ordering Instructions

**Complete Breaker Unassembled with Lugs**

Prices of PD6, HPD6, RD6, and HRD6 type breakers include frame, trip, mounting base (MB9301), and both line and load lugs (PD Frame – TA5P600, RD Frame – TC5R600). When ordered by these catalog numbers, the customer will receive the frame, trip, mounting assembly and lugs separately packaged. For applications requiring different mounting base or lugs, order individual items as needed.

**Complete Breaker Assembled without Lugs**

Prices of PXD6, HPXD6, RXD6, HRXD6 and CPD6 type breakers include frame with non-interchangeable trip unit installed only. Order required mounting base and lugs separately.

**100% Rated (3-Pole only)**

Types PXD6, HPXD6 breakers are available with 100% ratings. To order add suffix "H" to catalog number, and 10% to list price. 100% PD breakers require 90° C cable sized at 75° C ampacity and TC5R600 lugs. RD 2000A Frames not available with 100% ratings.

**50°C Applications** see page 17/128.

**400HZ Applications** see page 17/128.

## Lugs (6 required per breaker)④

| Catalog Number | No of Cables per Connector | Wire Range |

**Important Information**

ETI interrupting ratings are determined through combination tests with properly sized overload relays and contactors.

**⑤ Connectors included when ordering by circuit breaker catalog number for HEM, ED and CED6 ETIs. Order ETI circuit breaker and lugs (2 per pole) separately for the FXD6, CFD6, MXD6, CMD6, JXD6, CJD6, LXD6 and CLD6 ETI's.**

Lug Information pages 17/125 to 17/127
Accessories pages 17/132 to 17/137
Application data pages 17/119 to 17/120

■ Built to order. Allow 2–3 weeks for delivery.

① 2-pole available in 3-pole width only.

② When applied on DC Circuits — Trip levels will increase approximately +15 to 20%.

③ Tolerance -20%/+30% for lowest setting. All other settings are -20%/+20%

④ For 2-pole application use outside poles of 3-pole circuit breaker.

## General

### Protection of Motor Circuits

Molded case circuit breakers are used in motor circuits as a disconnecting means and for short-circuit protection. They should be used in conjunction with motor-running, over-current-protection devices, and should permit the motor to start without nuisance tripping from motor-inrush current. The circuit breaker should have a continuous-current rating of not less than 115% of the motor full-load current.

The recommended motor circuit protectors (Siemens ETI instantaneous only circuit breakers) listed have continuous-current ratings of at least 115% of motor full-load currents. The trip-setting positions are approximately 11 times motor full-load currents. The suggested trip settings may have to be adjusted upward to no higher than 1300% of full-load current for non-design E type motors, and no greater than 1700% of full load current for design E motors, to allow for motor start-up due to inrush currents.

### Breaker Mounted Immediately Ahead of Motor Starter

Siemens ETI motor circuit protectors are recommended for use in combination motor starters to provide selective short-circuit protection for the motor branch circuit. The adjustable instantaneous-trip feature of the Siemens ETI motor circuit protector provides for a trip setting slightly above the peak motor-inrush current. With this setting, no delay is introduced in opening the circuit when a fault occurs. This circuit breaker has no time-delay trip element. Therefore it must be used in conjunction with, and immediately ahead of, the motor-running overcurrent protective device.

Important: The information below does not apply to all motor applications: it is recommended that the user refer to the National Electrical Code (NEC) for specific needs.

**Table 1 (When Breaker is Mounted Immediately Ahead of Motor Starter)**

3-Phase Induction Type Motors (Siemens ETI motor circuit protectors for branch circuit use with alternating-current combination, full voltage motor starters).

# Motor Circuits

## Application

### Breaker Mounted at a Distance From Motor Starter

ET thermal-magnetic circuit breakers conform to the National Electrical Code table 430-52 requirements for motor branch and feeder circuit protection when properly applied in conjunction with motor-running overcurrent protective devices. The recommended circuit-breaker ratings in Table 2 provide adequate time delay for starting the majority of three phase induction motors.

To determine the ampere ratings of the ET breaker to protect a motor feeder, add the rating of the ET breaker used to protect the largest motor branch circuit in the group to the full-load currents of the remaining motors in the group.

### Interrupt Ratings

For normal commercial purposes, available fault current can conveniently be obtained in the Interrupting Selector Tables.

**Table 2 (When Breaker is Mounted at a Distance From Motor Starter)**

[1] The selection of breakers for this table is in accordance with Article 430, 2005 National Electric Code. Recommended circuit breakers are for full voltage starting, special consideration is necessary for reduced voltage starting.

[2] For panelboard applications, substitute the BL breaker for the BQ, ED2 circuit breakers may also be used.

[3] For non-interchangeable trip applications, substitute the FXD6 for the FD6, the JXD6 for the JD6, or the LXD6 for the LD6.

**Note:** Tolerances for instantaneous trip points meet UL 489 (7.3). Nominal AC instantaneous trip points are given in the tables. For DC instantaneous trip points, add 15% to nominal values.

Instantaneous trip adjustment is made through the breaker cover on all frame breakers. To change instantaneous trip point on circuit breaker, depress indicating knob, then rotate to desired position.

■ Built to order. Allow 2–3 weeks for delivery.

# Adjustable Instantaneous Magnetic Trip Settings

## Application

| Breaker Type | Maximum Continuous Amperes | Nominal AC Adjustable Trip Range | | | | | | | | ETI Motor Circuit Protector Catalog Number | Thermal Magnetic Catalog Number | |

### Ordering Information

Order by catalog number. Switches include frame and self protective trip unit only. Order lugs separately from pages 17/125 to 17/127.

■ Built to order. Allow 2–3 weeks for delivery.

[1] For 2-pole application use outside poles of 3-pole circuit breaker.

[2] For additional lugs see pages 7-159 to 7-161.

[3] Molded case switches up to R frame contain a self protecting instantaneous element, which may open circuit above their override set point.

[4] UL file E57556 Volume 1, section 2 and CSA LR 42022-51.

[5] Requires mounting block MB9301 or MBR9302.

Lugs pages 17/125 to 17/127
For accessories, please refer to pages 17/132 to 17/137

Connector wire ranges and cavities are established in conjunction with Table 6.1.4.2.1 of UL 489 standards.

### Table A

| For Use With Type(s) | Circuit Breaker Ampere Rating | Cables Per Lug | Lug Wire Range | Number of Poles |
|---|---|---|---|---|
| BQ, BL, QP | **Load Side** | | | |
| | 55-60 | 1 | #8–#4 AWG Cu-Al<br>#3 AWG requires 22 or 65 kAIC | This exception is applicable to 1- and 2-pole only |

**Note:**

(A) Molded case circuit breakers having a rated ampacity of 125 amperes or less are to be connected with 60 or 75°C wire. Circuit breakers having a rated ampacity greater than 125 amperes shall only be cabled with 75°C cable unless otherwise indicated on the circuit breaker label. Exceptions to this rule are outlined in article 110-14 C(1)(2) of the 2005 National Electrical Code.

(B) Connector wire ranges and cavities are established in conjunction with Table 6.1.4.2.1 of UL 489 standards.

① Lug is steel.
② Sold in package of six.
③ One nut keeper plate is required with each lug on the NGG breaker.
④ BT and BTH lug wire range is limited to #14 - #12 AWG for Copper.

# Aluminum Body Lugs for Copper or Aluminum Wire

▲ Built to order. Allow 6–8 weeks for delivery.

①Used for 100% rated JD/LD frame circuit breakers.

② Special purpose wire connectors, not for general use.

# Modifications

## General/Selection

A variety of internal and external accessories, as well as modifications, are available to adapt Siemens circuit breakers to special installation requirements. UL listed internal accessories for 100 through 2000A circuit breakers are field-addable.

Internal accessories fine tune an electrical distribution system, allowing control of the circuit breakers to meet special application requirements. For example, emergency situations may dictate tripping critically placed circuit breakers quickly. Shunt trips accomplish this conveniently and efficiently. Or, when voltage drops are a concern, undervoltage trips automatically open the circuit breaker at a predetermined voltage level.

A wide range of external operating and mounting accessories is also available. For example, face, shallow, and back mounting plates are ideal for tailoring BQ circuit breakers to OEM applications. A complete line of operating handles and handle-blocking devices meet switchboard, enclosure and safety needs. Plug-in mounting assemblies, which simplify switchboard mounting of circuit breakers and permit breaker removal without disconnecting bus or cable connections, are available.

**50°C Ambient Calibration — Not UL listed and not available for solid state, 100% rated breakers or 400HZ calibrated breakers.**

For BL Type Circuit Breakers
— Add suffix 'M' to catalog number
(Example: B120M) ..... No Charge

For BQ and ED Frame Circuit Breakers
— Replace 'B' in catalog number with 'M' ..... No Charge
(Example: BQ3M060, ED63M060)

For FD, JD, LD, LMD, MD, ND, PD, and RD Frame Circuit Breakers
Non-Interchangeable Trip (3–pole only) ..... No Charge
— Replace 'B' in catalog number with 'M'
(Example: FXD63M225, JXD63M400)

**400 HZ Calibration**

Not UL Listed
For all Not UL Listed Circuit Breakers, see derating tables on page 7-172 and order standard circuit breakers

**Fungus Proofing**

All 3VA, BQD, CQD, GB, GG, ED, FD, JD, LD, LMD, MD, ND, PD, RD, MG, NG, and PG Frame Circuit Breakers are inherently fungus resistant and do not require special treatment.

For BL, and BQ Type Circuit Breakers ..... Add $10.00 net per pole
— Consult Sales Office for Availability

For all other Circuit Breaker Types ..... Add $160.00 net per device
— Consult Sales Office for Availability

**Certificate of Compliance with Test Report (catalog number CERT OF COMP.)** Add $210.00 net
Certificate of compliance testing must be performed on the actual device being shipped. The certificate cannot be provided after initial shipment. Order for devices with COC requirement must be placed directly with the factory by the sales office and shipped directly to the end user.

## UL 489 Supplement SB Naval Use Breakers

Breakers tested to UL 489 Supplement SB are qualified for use on non combat and auxiliary naval vessels.

Various Siemens molded case breakers can be labeled "NAVAL" in compliance with UL 489 Supplement SB. See table to the right for specific breaker types and UL file references.

Supplement SB testing comprises two sets of vibration tests. The first is to find mechanical resonances in the product and to subject the breaker to extreme testing at each resonant frequency. The second is a swept frequency test, in which the frequency of excitation is changed in intervals of 1Hz, and held at each frequency for five minutes. The excitation frequencies run from 4 to 33Hz, and the test is conducted in each of the three orthogonal axes of the breaker.

During these tests, the breaker must not trip from the closed position, nor may the contacts touch from the open position. Calibration and insulation resistance are also verified during the test.

For detailed information, refer to UL 489, Supplement SB.

### Ordering Information

For "NAVAL" label, add **$75.** net per catalog number per order. Order must be placed directly with the factory by Siemens Sales Office.

| Breaker Type | UL File |
|---|---|
| BL | E82615, Vol 1, Sec 1 & 4 |
| NGB | E10848, Vol 10, Sec 3 |

### Shunt Trip (ST)

One or all critical circuit breakers may be tripped from a distant control point by use of a shunt trip device. A shunt trip operates through an auxiliary switch contact; when the breaker opens, current is not maintained on the shunt trip coil.

### Undervoltage Trip (UVT)

When voltage drops to a value below 35% of the nominal coil rating, the undervoltage trip device automatically opens the breaker. The operation is instantaneous, and the circuit breaker cannot be reclosed until the voltage returns to 85% of line voltage. The undervoltage trip, which is continuously energized, must be energized before the circuit breaker can be closed.

### Auxiliary Switch (AUX)

For applications requiring remote "on" or "off" indication (or electrical interlocking), auxiliary switches are available. Each switch comprises an "A" (open when circuit breaker is open) and a "B" (closed when circuit breaker is open) contact with a common connection. (Form C)

### Alarm Switch (ALSW)

The alarm switch contact is closed when the circuit breaker is opened automatically by an overload, short circuit, shunt trip or undervoltage trip. The alarm switch contact is open when the circuit breaker is reset.

For ED Frames

**S01FD60**

For FD Frames

**S01FD60**

For JD and LD Frames

①Factory assembled only
②If mechanical interlock is installed, no accessory module can be installed in the right pocket.
③If mechanical interlock is installed, no accessory module can be installed.
④If mechanical interlock is installed, no accessory module can be installed in the left pocket.

▲ Built to order. Allow 6–8 weeks for delivery.

[1] Must be ordered separately with other plug-in assemblies.

[2] Each piece catalog number consists of (1) mounting block assembly and required tulip assemblies (2) for 2-pole, (3) for 3-pole

[3] For vertical bus mounting — for horizontal, substitute PC5665 for PC5664 and PC5667 for PC5666.

[4] Price includes one current stud, insulating tube, stud nuts and terminal shields, when required.

[5] For proper electrical clearance, studs must alternate between short and long stud lengths on circuit breaker poles (e.g. SLSLSL or LSLSLS).

[6] Plug-in assembly for EG breakers include line and load side in one assembly.

# Unusual Operating Conditions

**Note:** The information provided on this and the next page is intended for reference and recommendation only. Because several variables can act on a circuit breaker's performance at the same time, the data below is based less on controlled testing, than on experience and engineering judgment. Contact Siemens for further information on special conditions and treatment.

## High Ambient Temperatures

Because thermal-magnetic trip breakers are temperature sensitive and calibrated for a specific ambient of 40° C (104° F) (average enclosure temperature), a higher ambient will cause the breaker to trip at lower current than its nameplate rating, in other words, causing the breaker to "derate" (see Table 1). Similarly, the current carrying capacity of a circuit conductor is based upon a certain ambient temperature, a higher ambient will reduce its current carrying capacity, causing it to "derate." Thus, with a fluctuating temperature, a thermal-magnetic breaker will derate nearly parallel with its connected circuit conductors and maintain close circuit protection. If the application temperature exceeds 40° C (104° F) and is known, either a breaker specially calibrated for the higher ambient or one oversized according to Table 1 may be selected. In a case such as this, the circuit conductors should be oversized as well.

Siemens Sensitrip® IV and Type SB Encased Systems Breakers are insensitive to temperature changes. However, they do include circuitry to protect the components from abnormally high temperatures.

## Moisture — Corrosion

For atmospheres having high moisture content and / or where fungus growth is prevalent, a special preventive treatment may be required.

Where the air is heavily laden with corrosive elements, breakers made with special corrosion-resistant finishes may be required.

## Altitude

Reduced air density at altitudes greater than 6600 ft. (2000 meters) affects the ability of a molded case circuit breaker to transfer heat and interrupt faults. Therefore, circuit breakers applied at these altitudes should have interrupting, insulation and continuous currents derated as indicated in Figure 1.

**Table 1 — Temperature Derating Data for Thermal-Magnetic Breakers**

## 400 Hz Systems①

Siemens molded case circuit breakers can be applied for overcurrent protection on 400Hz systems, commonly used to power computer installations, aircraft, military and other specialty equipment. Below are basic guidelines.

### Circuit Breaker Derating Required

This table lists the maximum continuous current carrying capacity for Siemens breakers at 400Hz. Due to the increased resistance of the copper sections resulting from the skin effect produced by eddy currents at these frequencies, circuit breakers in many cases require derating. The thermal derating on these devices is based upon 100%, three phase application in open air in a maximum of 40° C (104° F) with 48 in. (1219 mm) of the specified cable or bus at the line and load side. Additional derating of not less than 20% will be required if the circuit breaker is to be utilized in an enclosure. Further derating may be required if the enclosure ambient temperature exceeds 40° C (104° F).

### Cable and Bus Sizing

The cable and bus sizes to be utilized at 400Hz are not based on standard National Electric Codes tables for 60Hz application. Larger cross sections are necessary at 400Hz. All bus bars specified are based upon mounting the bars in the vertical plane to allow maximum air flow. All bus bars are spaced at a minimum of 0.25 in. (6 mm) apart. Mounting of bus bars in the horizontal plane will necessitate additional drafting. Edgewise orientation of the bus may change the maximum ratings indicated. If additional information is required for other connections of cable or bus, contact Siemens for information.

### Application Recommendations

It is recommended that temperatures be measured on the line and load terminals or T-connectors of the center pole. These are usually the hottest terminals with a balanced load. A maximum temperature of 75° C (35° C over a maximum ambient of 40° C) would verify the particular application. Temperature profiles taken on these breakers can be correlated to ensure that the hottest points within the breaker are within the required temperature limits.

### Factory Configuration

When required, molded case circuit breakers may be factory calibrated for 400Hz application. These breakers are specially labeled for 400Hz usage and their nameplate current rating will include the necessary derating factory. The highest "Maximum Continuous Amperes" rating at 400Hz, found in the table below approximates the highest specially calibrated 400Hz nameplate ampere rating available for a given frame size. Contact Siemens for ordering information on other breakers applied in 400Hz systems.

①The information provided on this page is intended for reference and recommendation only. Because several variables can act on a circuit breaker's performance at the same time, the data above is based less on controlled testing, than on experience and engineering judgment. Contact Siemens for further information on special conditions and treatment.

②Additional derating may be required if the ambient temperature is greater than 40°C (104°F).

③Calculated after derating to compensate for the heating of the copper conductor, caused by the skin effect generated by eddy currents produced at 400/415HZ.

# Typical Specifications

## General Specifications

Molded case circuit breakers shall provide circuit overcurrent protection with inverse time and instantaneous tripping characteristics and shall be Siemens Sentron, Sensitrip or approved equal.

All circuit breakers shall be listed by Underwriters' Laboratories, Inc., conform to applicable requirements of NEMA Standard Publication No. AB1 and meet appropriate classifications of Federal Specifications W C 375B/Gen.

All circuit breakers shall have a quick-make, quick-break over center toggle type mechanism and the handle mechanism shall be trip free to prevent holding contacts closed against a short circuit or sustained overload. All circuit breaker handles shall assume a position between "ON" and "OFF when tripped automatically. Multi-pole circuit breakers shall be common-trip such that an overload or short circuit on any one pole will result in all poles opening simultaneously. Arc extinction is to be accomplished by magnetic arc chutes. All ratings are to be clearly visible. When reverse feed is indicated on the drawings, in accordance with UL, circuit breakers with sealed trip units shall be supplied.

## Thermal Magnetic Specifications

Unless otherwise noted on the drawings, all Circuit breakers 2000 Ampere and below shall have thermal-magnetic trip units, with inverse time-current characteristics. Automatic operation of these circuit breakers shall be obtained by means of thermal-magnetic tripping devices located in each pole providing inverse time delay and instantaneous circuit protection. Circuit breakers shall be ambient compensating in that, as the ambient temperature increases over 40°C, the circuit breaker automatically derates itself so as to better protect its associated conductor. Thermal magnetic breakers from 250 to 2000A frames shall have thermal interchangeable trip units, with instantaneous magnetic trip settings that are adjustable and accessible from the front of all circuit breakers on frame sizes 250 Amperes and above. Where indicated, provide circuit breakers UL listed for application at 100% of their continuous ampere rating in their intended enclosure.

## Motor Circuit Protectors

Where indicated on the drawings and in the combination motor starter/motor control center schedule, furnish instantaneous magnetic trip only circuit breakers for motor short circuit protection. The magnetic trips shall be adjustable and accessible from the front of all circuit breakers frames. The continuous current rating shall be between 1 and 800 Amperes as indicated on the drawing.

The interrupting rating of the circuit breakers shall be as indicated in the specifications, and shown on the drawing or single line diagram. The interrupting rating of the circuit breakers shall be at least equal to the available short circuit current at the line terminals of the circuit breaker and correspond to the UL listed integrated short circuit current rating specified.

## Internal Accessories

Provide shunt trips, bell alarms, and auxiliary switches as shown on the contract drawings. Gold plated auxiliary switches shall be supplied for PLC connection. Internal accessories for all breakers shall be UL listed for field installation and modification.

## Connection Accessories

Unless otherwise noted, Mechanical lugs shall be provided with all Molded Case Breakers. Where indicated on the drawings, compression lugs shall be provided on 1200 Ampere frame and below circuit breakers. All compression lugs shall be supplied by the Circuit Breaker Manufacturer. Where indicated on the drawings, UL listed plug-in or rear connectors shall be supplied.

## Solid State Sensing Specifications

As indicated on the drawings, circuit breaker frames 400 Ampere through 3200-Ampere shall have microprocessor-based RMS sensing trip units, with the capability to measure through to the 21st harmonic. Automatic operation of all circuit breaker frames 400A and larger shall be obtained by means of solid state tripping elements providing inverse time delay and (instantaneous) and/or (short-time delay) circuit protection. Continuous current ratings shall be adjustable from 20% to 100% of the trip unit rating, without the need for a rating plug. Long-time delay and instantaneous trip shall be adjustable. The optional short-time trip function shall have adjustable pick-up settings, three fixed times, and $I^2t$ ramp. Circuit breaker frames 400A and larger, and where indicated on the drawings, shall be 100% equipment rated.

## Integral Ground Fault Option

Main and feeder circuit breakers, as indicated on the drawings, shall be provided with integral ground fault protection. Ground fault pick-up shall be adjustable from 20% to 70% of the circuit breakers maximum continuous current rating. Ground fault time delay shall be adjustable with three $1^2t$ ramps.

## Metering Option

When indicated on the drawings, solid state trip breakers shall be furnished with a plug-in or panel mounted metering device. This device shall simultaneously display all three phase currents, as well as average current, ground current, and phase unbalance. In addition it shall display breaker status, a max log, and a trip log. The trip log will retain and display date, time and type of trip (overload, short circuit or ground fault) for the most recent 5 trip events.

## Current Limiting Specifications

Where indicated on the drawings, Siemens current limiting circuit breakers are to be furnished. Current limiting circuit breakers shall limit the let-through $I^2t$ to a value less than the $I^2t$ of one-half cycle wave of the symmetrical prospective current without any fusible elements when operating within its current range.

## Series Connected Combination Specifications

Where protective devices are applied in series combination, such that the prospective available fault current exceeds the interrupting rating (AIR) of the downstream protective devices, such combinations shall be UL recognized combinations. All electrical equipment using these UL recognized circuit breaker combinations shall be clearly marked in accordance with NEC Section 240-83(c).

| | General Duty | Heavy Duty | Double Throw |
|---|---|---|---|
| **Application** | General Duty Switches are intended for applications where reliable performance and continuity of service are needed, but where duty requirements are not severe and usual service conditions prevail. (These switches are intended for use primarily with supply circuits rated 240V AC or less where the available fault current is less than 100,000A when used with Class R or T fuses or 10,000A max. when used with Class H fuses.) | Heavy Duty Switches are intended for use in applications where:<br>1. Rugged construction, reliable performance, continuity of service and ease of maintenance are emphasized, or<br>2. Available fault currents higher than 10,000A are likely to be encountered, such as in manufacturing plants, mass production industries, and commercial, institution-al and other large buildings served by network systems or transformers of higher capacities.<br>3. System voltage is 600V AC or DC Max.<br>4. A Type 12 or 4 / 4X enclosure is required. | Double throw switches are intended to transfer loads from one power source to another. All 2 & 3 pole double throw switches are suitable for use as service equipment. All are UL Listed. Switches are rated for use on systems with an available fault current of up to 10,000 AIC when protected with Class H fuses or either 100,000 or 200,000 AIC when protected with Class R, J or Class T fuses. They can also be used to connect a single source of power to either of two loads, In this application it is necessary to field modify fusible switches so that the fuses are on the load side of the switching mechanism. |
| **Short Circuit Withstand Ratings** | Suitable for use on systems capable of delivering not more than 100,000 RMS symmetrical amperes of fault current as follows:<br>Sw. Rating / AIC Rating / Protective Device①<br>30-600A / 10,000 / Circuit Breaker<br>30-600A / 10,000 / Class H Fuse<br>30-600A / 100,000 / Class R Fuse<br>100-600A / 100,000 / Class J or T Fuse | Suitable for use on systems capable of delivering not more than 200,000 RMS symmetrical amperes of fault current as follows:<br>Sw. Rating & Tpye / AIC Rating / Protective Device①<br>All Heavy Duty & DT / 10,000 / Circuit Breaker<br>30-600A HD & DT / 10,000 / Class H Fuse<br>60A Compact HD / 100,000 / Class R, J or T Fuse<br>GD & 4P DT / 100,000 / Class R, J or T Fuse<br>30-600A HD / 200,000 / Class R, J or T Fuse<br>30-600A DTF & DTNF DT② / 200,000 / Class R, J or T Fuse<br>800 & 1200A HD & DT② / 200,000 / Class L or T Fuse | |
| **Fuses** | Fusible switches will accept the following UL class fuses:<br>30-600A "GF" Class H & K, Class R with kit<br>100-600A "GF" Class J-move base<br>100-200 "GF" Class T with kit<br>400-600A "GF" Class T with kit | Fusible switches will accept the following UL class fuses:<br>30-600A "HF" Class H & K, Class R with kit<br>30-400A, 600V "HF" Class J-move base<br>100-600A, 240V "HF" Class J-move base<br>100-200A "HF" Class T with kit<br>400-600A "HF" Class T with kit<br>800-1200A "HF" Class L, Class T③ | Fusible switches will accept the following UL class fuses:<br>30-200A "DT" & "F" Class H & K, Class R with kit<br>30 & 60A 600V "DT" Class J-move base<br>100-200A "DT" Class J-move base, Class T with kit<br>400-600A "DT" Class J-standard, Class T-move bases<br>400A 240v "F" Class H-standard<br>400A, 600V & 600A "F" Class T-Standard |
| **Cover Interlocks** | Voidable – cover interlocks on switches prevent the switch door from being opened when in the "ON" position. No cover interlock on 30-60A GD. | Voidable dual cover interlocks standard on all heavy duty switches. Prevents cover from being opened when switch is in the "ON" position and prevents switch from being turned "ON" when door is opened. | Dual cover interlocks standard on all double throw switches. Prevents cover from being opened when switch is in the "ON" position and prevents switch from being turned "ON" when door is opened. |
| **Underwriters' Laboratories, Inc.** | Listed by UL under file #E4776 as enclosed switches and also suitable for use as service equipment (where applicable).<br>UL98 Enclosed and Deadfront Switches. | | |
| **NEMA Specifications** | Meet NEMA standard KS-1-2001 for type GD switches. | Meet NEMA standard KS-1-2001 for type HD switches. | Meet NEMA standard KS-1-2001 type GD for "DTG" & type HD for "DT", "F" & "NF" switches. |
| **Seismic Qualifications** | 30-1200A GD & all HD switches and "DT" type double throw switches have been tested and designed in accordance with the American Society of Civil Engineers (ASCE) 7-17 chapter 13 - Compliance Level SDS = 2.00 g (z/h = 1); 2.50 g (z/h=0) | | |
| **Groundable Neutral** (All neutrals are bondable for service entrance use.) | Fusible switches have groundable neutral blocks factory installed. Non-fusible switches accept field addable neutrals. | All switches (both Fusible and Non-Fusible) are either supplied with factory installed neutrals or accept field addable neutrals. | All except 4 pole switches will accept field addable neutrals except that "DTG" 100 & 200A switches are also available with factory installed neutrals. |
| **Padlocks** | Padlockable cover latch. OFF padlock provisions on handle. | Padlockable cover latch and multiple OFF padlock provisions on handle. | Padlockable cover latch and multiple OFF padlock provisions on handle. |
| **HP & Load Break Ratings** | All General Duty, Heavy Duty and Double Throw Switches are both load break and horsepower rated. | | |

① The protective device can either be a fuse or circuit breaker protecting a non-fusible switch. The ampere rating of the protective device must not exceed the switch ampere rating.

② All 4 pole and fusible double switches with catalog numbers starting with "F" are rated 100,000 AIC max.

③ 800A switches do not require an adapter kit, bases can be relocated to accommodate class-T fuses. A class-T adapter kit is required available for 240V applications on 1200A switches.

# Feature Comparison

| General Duty | Heavy Duty | Double Throw | Features / Ratings |
|---|---|---|---|
| ▪ | ▪ | ▪ | 30 thru 600 Amps |
| | ▪ | ▪ | 800 and 1200 Amps |
| ▪ | ▪ | ▪ | 240 Volt AC |
| | ▪ | ▪ | 600 Volt AC |
| ▪ | ▪ | ▪ | 250 Volt DC |
| | ▪ | | 600 Volt DC |
| ▪ | ▪ | ▪ | Double-break visible blade design (30-200A) |
| ▪ | ▪ | ▪ | Quick-make, quick-break switching action (excludes 30A GD) |

## Double Break Switching Action

Like the time-proven Vacu-Break Design, the Siemens VBII double break switching action breaks the arc in two places in 30-600A ratings. This reduces heat generation and increases switching speed by doubling the breaking distance. The result is enhanced performance and increased longevity. We also provide the most visible blade design available today. Unlike conventional knife blade switches, the blades are self-aligning to ensure positive contact. In addition, they have no wear and friction point since the "electrical hinge" has been eliminated. The result is a very fast, positive and reliable switching action for even the most severe applications.

① 400, 600V & 600A fusible, double-throw switches accept only Class J or T fuses. Only 800 & 1200A HD switches will accept Class L fuses.
② 30-60A general duty switches have fuse clips constructed of spring type copper.
③ 30-200A Type VBII in stainless steel enclosures.
④ 100-200A.
⑤ 60A only suitable for Cu at 75°.
⑥ 200A general duty switches have aluminum neutral assemblies.
⑦ 100-600A GD & DT and 100-1200A HD switches will accept Class T fuses.

## Enclosure Types

A **Type 1** enclosures are intended for indoor use primarily to provide protection against contact with the enclosed equipment in locations where unusual service conditions do not exist.

B **Type 3R** enclosures are intended for outdoor use primarily to provide a degree of protection against falling rain and sleet and must remain undamaged by the formation of ice on the enclosure. They are not intended to provide protection against conditions such as dust, internal condensation, or internal icing.

C **Type 4, 4X** enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust, rain, splashing water and hose-directed water. They are not intended to provide protection against conditions such as internal condensation or internal icing. Also meets 4X definition by providing a high degree of protection against corrosion. Siemens 30-200A stainless steel 4X switches are supplied stainless interior parts and hardware as standard.

D **Type 4** enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust, rain, splashing water and hose-directed water. They are not intended to provide protection against conditions such as internal condensation or internal icing.

E **Type 12**① enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt and dripping water. They are not intended to provide protection against conditions such as internal condensation.

**Type 7/9** enclosures for use in hazardous locations. Use with molded case switches listed in Section 7.

## Load Break Ratings

All Siemens safety switches are load break rated. The load break rating is assigned by UL after the switching unit has successfully performed the following tests:

| Switch Ampere Rating | Number of ON/OFF Operations per Minute | Number of Operations | | |
|---|---|---|---|---|
| | | With Current | Without Current | Total |
| 30–100 | 6 | 6000 | 4000 | 10000 |
| 200 | 5 | 6000 | 2000 | 8000 |
| 400 | 4 | 1000 | 5000 | 6000 |
| 600 | 3 | 1000 | 4000 | 5000 |
| 800 | 2 | 500 | 3000 | 3500 |
| 1200 | 1 | 500 | 2000 | 2500 |

## Maintenance

Refer to the latest edition of the following standards for switch maintenance.

- NEMA KS-3: Guidelines for Inspection and Preventive Maintenance of Switches Used in Commercial and Industrial Applications (available online at www.nema.org)
- NFPA 70B: Recommended Practice for Electrical Equipment Maintenance (available online at www.nfpa.org)

## Horsepower Ratings

All Siemens safety switches, where appropriate, are horsepower rated. Ratings are approved by UL only after the switching unit has undergone testing to determine its acceptability which includes repeated interruption of the locked rotor current of the motor for which it is to be rated as follows:

| Max HP Rating | Number of ON/OFF Operations per minute | Number of Cycles of Operation |
|---|---|---|
| 100 | 6 | 50 |
| 500 | 1 | 10 |

① VBII Type 12 switches are also rated 3R & 3S for outdoor use. Type 3R is defined in B above. 3S rated enclosures provide a degree of protection against windblown dust and allow operation when the enclosure is ice laden.

# Type VBII Safety Switch Catalog Numbering System

## Product Overview

| H | F | 3 | 6 | 4 | N | R | CU | A |
|---|---|---|---|---|---|---|---|---|

**Switch Type**

| | |
|---|---|
| **L** | = General Duty Quick Install④ |
| **G** | = Gen. Duty |
| **H** | = Heavy Duty |
| **DT** | = Double Throw |
| **DTG** | = General Duty DT |

**Fused or Non-Fused**

| | |
|---|---|
| **F** | = Fused |
| **NF** | = Non-Fused |

**Number of Poles**

| | | | |
|---|---|---|---|
| **2** | = 2 | **4** | = 4 |
| **3** | = 3 | **6** | = 6 |

**Voltage**

| | |
|---|---|
| **1** | = 120V or 120/240V |
| **2** | = 240V |
| **6** | = 600V |

**Amperes**

| | | | |
|---|---|---|---|
| **1** | = 30A | **5** | = 400A |
| **2** | = 60A | **6** | = 600A |
| **3** | = 100A | **7** | = 800A |
| **4** | = 200A | **8** | = 1200A |

**Series Type**

| | |
|---|---|
| **A** | = All General Duty, 400A HD, 600A HD |
| **Omit** | = All HD except 400A, 600A |

**Special Applications With:**

| | |
|---|---|
| **CH** | = Crouse-Hinds Receptacle |
| **H** | = Height or Size Reduced |
| **L** | = Overzised enclosure / Plus Series |
| **LL** | = Max Series (30A GD) |
| **PN** | = Pyle-National Receptacle |
| **PV** | = Photovoltaic rated |
| **PVPG** | = Photovoltaic rated, Positive Ground |
| **W** | = Viewing Window |

**Enclosure Type**

| | |
|---|---|
| **Omit** | = Type 1, Indoor |
| **R** | = Type 3R, Outdoor |
| **S** | = Type 4 / 4X, Stainless Steel |
| **SS** | = Type 4 / 4X, 316 Grade Stainless Steel |
| **X** | = Type 4 / 4X, Non-Metallic |
| **J** | = Type 12, Industrial |

**With or Without Neutral**

| | |
|---|---|
| **Omit** | = Less Neutral |
| **N** | = With Neutral |

## Type VBII Accessories Catalog Numbering System

| H | R | 6 | 4 | A |
|---|---|---|---|---|

**Switch Type**

| | |
|---|---|
| **H** | = Heavy Duty |
| **G** | = General Duty③ |

**Accessory Type**

| | |
|---|---|
| **A1** | = Auxiliary Switch 1/NO and 1/NC |
| **A2** | = Auxiliary Switch 2/NO and 2/NC |
| **A3** | = Auxiliary Switch Low Current |
| **CL** | = Compression Lug Barrier / Mounting Kit |
| **CU** | = Copper Lug③ |
| **G** | = Ground Lug Kit |
| **G2** | = Insulated Ground Lug Kit |
| **J** | = Class J Fuse Kit② |
| **LC** | = Copper Lug Kit③ |
| **N** | = Neutral |
| **N2** | = 200% Neutral③ |
| **NCM** | = Field Replacement Lug Kit② |
| **P** | = Fuse Puller Kit |
| **R** | = Class R - Fuse Clip Kit |
| **T** | = Class T - Fuse Kit |

**Series Type**

| | |
|---|---|
| **A** | = All General Duty, 400A HD, 600A HD |
| **Omit** | = All HD except 400A, 600A |

**Amperes**

| | | | |
|---|---|---|---|
| **1** | = 30A | **1234** | = 30/60/100/200A |
| **2** | = 60A | **4** | = 200A |
| **12** | = 30/60A | **5** | = 400A |
| **3** | = 100A | **56** | = 400/600A |
| **23** | = 60/100A | **5678** | = 400/600/800/1200A |
| **123** | = 30/60/100A | **6** | = 600A |
| | | **78** | = 800/1200A |

**Maximum Voltage**

| | |
|---|---|
| **2** | = 240V Max① |
| **6** | = 600V Max |

**Note:** Catalog numbering systems above do not apply to 4-pole & Type "F" & "FR" double throw switches & accessories.

① For 400A, 600A use 680V max accessories except for T Fuse Kit.
② Only offered for 400A, 600A.
③ For 30A-200A, 800A-1200A.
④ Quick install switches are NEMA 3R rated with ground lug included and no top top hub provision.

## Wire Ranges (Line, Load and Standard Neutral)

| Switch Ampere Rating | Wire Range with Wire Bending Space Per NEC Requirements | Lug Wire Range |
|---|---|---|
| 30GD | #14-8 AWG (Cu/Al) | #14-2 AWG (Cu/Al)① |
| 60GD | #14-6 AWG (Cu) | #14-2 AWG (Cu)① |
| 30HD | #14-6 AWG (Cu/Al) | #14-2 AWG (Cu/Al) |
| 60HD②③ | #14-3 AWG (Cu/Al) | #14-2 AWG (Cu/Al) |
| 100④ | #14-1/0 AWG (Cu/Al) | #14-1/0 AWG (Cu/Al) |
| 200⑤ | #6 AWG-250 Kcmil (Cu/Al) | #6 AWG-300 Kcmil (Cu/Al) |
| 400⑥ | (1) 1/0 AWG-600 Kcmil (Cu/Al)<br>(2) 1/0 AWG-500 Kcmil (Cu/Al) | (2) 1/0 AWG-600 Kcmil (Cu/Al) |
| 600⑥ | (1) 1/0 AWG-600 Kcmil (Cu/Al)<br>(2) 1/0 AWG-500 Kcmil (Cu/Al) | (2) 1/0 AWG-600 Kcmil (Cu/Al) |
| 800 | (3) 1/0 AWG-750 Kcmil (Cu/Al) Line Load<br>(4) 1/0 AWG-750 Kcmil (Cu/Al) neutral | (3) 1/0 AWG-750 Kcmil (Cu/Al) Line Load<br>(4) 1/0 AWG-750 Kcmil (Cu/Al) neutral |
| 1200 | (4) 3/0 AWG-750 Kcmil (Cu/Al) Line Load<br>(4) 1/0 AWG-750 Kcmil (Cu/Al) neutral | (4) 1/0 AWG-750 Kcmil (Cu/Al) Line Load<br>(4) 1/0 AWG-750 Kcmil (Cu/Al) neutral |

■ Built to order. Allow 3-4 weeks for delivery.

① Neutral lugs (only) are UL approved to accept #14-4 CU/Al cable.
② Compact HD NF switches are also UL approved for #2 Cu/Al conductors.
③ Also for 30A oversized heavy duty switches.
④ Also for 60A oversized heavy duty switches.
⑤ All 200A Heavy Duty Switches have a wire range & wire bending space for (1) #6-300 Kcmil (Cu/Al).
⑥ Max. wire size for height reduced switches is 500 kcmil (Cu/Al).

# Non-Fusible Safety Switch Short Circuit Current Ratings

# General Duty Safety Switches

## Features (60-600A)

1. Cover interlock
2. Tangential knockouts 100-600A for easy conduit lineup
3. Quick-make, quick-break operating mechanism that ensures positive operation
4. Provisions for T, R, J, H, and K class fuses (T & J 100-600A)
5. Wiring gutters that meet or exceed NEC wire-bending space requirements
6. Visible blade, double-break switch action
7. Positive 2 or 3 point mounting
8. Highly visible red handle grip
9. Informative door labeling which includes replacement parts list
10. Handle and cover padlocking provisions
11. 100A and above have side-hinged door that opens 180 degrees for easier wiring

**Note.** 400A and 600A GD switches include internal shields which meet 2020 NEC 230.62 touch safe requirements for service entrance equipment.

① Dual HP ratings: Std.- applies with installed non-time delay fuses. Max.- applies with installed time-delay fuses.
② Internal shields for 30A to 200A switches to meet 2020 NEC 230.62 touch safe requirements for service entrance equipment can be purchased separately.
③ These switches are UL-listed for application on grounded B-phase systems.
④ Service entrance labeled unless otherwise noted.
⑤ Compact series
⑥ PLUS series: largest enclosure option for 60A non-fusible, 30A fusible.
⑦ 10 switches per standard package.
⑧ 5 switches per standard package.
⑨ Has provision for ECHA type hub.

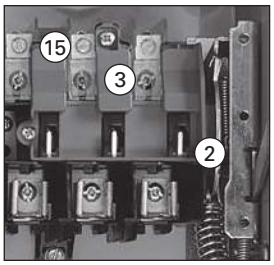
① Dual HP ratings: Std.- applies with installed non-time delay fuses. Max.- applies with installed time-delay fuses.
② Service entrance labeled unless otherwise noted.
③ Internal shields for 30A to 200A switches to meet 2020 NEC 230.62 touch safe requirements for service entrance equipment can be purchased separately.
④ Quick install switches are NEMA 3R rated with ground lug included and no top top hub provision.
⑤ MAX series: Larger enclosure compared to LNF221RLA.
⑥ PLUS series: Larger enclosure compared to LNF222RA.
⑦ 10 switches per standard package.
⑧ 5 switches per standard package.
⑨ Not suitable for service entrance.
⑩ Compact series
⑪ PLUS series: larger enclosure, metal handle, quick make-break action.
⑫ MAX series: largest enclosure option for 30A non-fusible, included same upgraded features as PLUS series and additional KOs.
⑬ PLUS series: largest enclosure option for 60A non-fusible, 30A fusible.
⑭ Has provision for ECHA type hub.

# Heavy Duty Safety Switches

## Features



1. Quick-make, quick-break operating mechanism that ensures positive operation.
2. Visible blade, double-break switching action.
3. Arc chutes dissipate heat and prolong switch life.
4. Highly visible red handle grip. Designed for hook stick operation.
5. Defeatable dual cover interlock.
6. Center punch provided for field drilling to allow ON padlocking.
7. Handle can be padlocked in the OFF position with up to (3) padlocks with 5/16" hasps.
8. Generous top, bottom and side gutters that meet or exceed NEC wire-bending space requirements.
9. Informative door labeling which includes replacement parts list.
10. Tangential knockouts through 600A for easy conduit lineup.
11. Side-hinged door that opens past 180 degrees for easier wiring.
12. Unique enclosure design increases rigidity and prevents cuts and scrapes to conductors and installer's hands.
13. Spring reinforced fuse clips that assure reliable contact for cool operation.
14. Door latch securely holds door closed and allows cover padlocking.
15. Front removable mechanical lugs that are suitable for CU/Al 60 or 75° C conductors.
16. Lugs are field convertible to copper body and to a wide variety of compression connectors.
17. Hinged clear line terminal shield with probe holes for inspecting or testing line side terminals.
18. Embossed aluminum nameplate on Heavy Duty Switches provides highly visible ON/OFF indication.
19. Drawn cover for increased rigidity and resistance to abuse.
20. Top key hole and bottom mounting holes provide easy 2 or 3 point mounting.

① Height reduced switch (45.25 rather than 56 inches in height) for use with 500MCM or smaller conductors.
② Dual horsepower ratings: Std.- applies when non-time delay fuses are installed. Max.- applies when time-delay fuses are installed.
③ These switches are UL-listed for application on grounded B-phase systems and are suitable for 3-phase motor applications.
④ When a neutral is required use a field installed neutral kit.
⑤ Suitable for use as service entrance equipment.
⑥ Also rated Type 3S/3R.
⑦ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, substitute "SS" in catalog number for "S." 316 available up through 600A.

① 60-600A 3-Pole switches are also rated 600V DC.
② Height reduced switch (45.25 rather than 56 inches in height) for use with 500MCM or smaller conductors.
③ Use 3-Pole switch for 200A applications.
④ Dual horsepower ratings: Std.- applies when non-time delay fuses are installed. Max.- applies when time-delay fuses are installed.
⑤ Suitable for use as service entrance equipment except on 1200 Amp solidly grounded wye systems per NEC 230.95.
⑥ Also rated Type 3S/3R.
⑦ Indicates oversized enclosure (30A switch with 60A lugs in a 60A enclosure or 60A switch with 100A lugs in a 100A enclosure).
⑧ 600V DC & 600V DC horsepower rating shown requires (2) poles to be connected in series.
⑨ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, substitute "SS" in catalog number for "S." 316 available up through 600A.

■ Built to order. Allow 3-5 weeks for delivery.
① 60-600A 3-Pole switches are also rated 600V DC.
② Compact switch (11.1"H, 6.6"W box less cover and handle). Short circuit withstand rating—100,000 RMS sym. amps.
③ Use 3-Pole switch for 200A application.
④ Suitable for use as service entrance equipment except for 1200 when used on a 480 or 600V grounded wye system.
⑤ Also rated type 3S / 3R.
⑥ Indicates oversized enclosure (30A switch in a 60A enclosure or a 60A switch in a 100A enclosure.
⑦ 600V DC and 600V DC horsepower rating shown requires (2) poles to be connected in series.
⑧ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, substitute "SS" in catalog number for "S." 316 available for up through 600A.

# Heavy Duty Safety Switches

## Type 3R, 4/4X, & 12 with Viewing Window

### Description

30–600A, 3-pole 600V max. in fusible and non-fusible versions in Type 4/4X stainless steel, and Type 12, and select 3R enclosures.

All allow viewing of visible blade position with the door closed. 30–200A also allow viewing of indicating type fuses.

### Features

- Rugged installer-friendly enclosure design features a gasket flange with continuously welded seams
- Tool-free cover latches
- Two, three and four point mounting
- Metal handle with large insulating grip features a positive stop in both ON and OFF position
- Ground lugs provided as standard in Type12 and 4X switches
- Type 12 enclosures are fabricated from galvanized steel and are also rated for 3R/3S outdoor applications
- Type 4X stainless steel switches (30–200A) are provided with stainless steel interior parts
- The widest range of accessories available including 200% neutrals, gold plated PLC auxiliary contacts and isolated ground kits

① 200A switches are also rated 600V DC.
② Maximum HP ratings listed apply only when time delay fuses are used.
③ Also rated 3S/3R for outdoor use.
④ All switches are suitable for use as service entrance equipment.
⑤ 600V DC and 600V DC horsepower rating shown requires (2) poles to be connected in series.
⑥ 304 grade stainless steel. For switches with enclosures constructed from 316 grade stainless steel, substitute "SS" in catalog number for "S." 316 available for up through 600A.

# Elevator Control Switches

## Application

Siemens Type (ECS) Elevator Control disconnect switches are designed for single cable or hydraulic elevator application to interrupt the incoming AC power upon receiving a signal from the Fire Alarm Control Panel (FACP).

## Description

The Elevator Control switch units come completely assembled for quick installation, eliminating the labor and time needed to assemble individual components. Therefore, the numbering system assures that you get all of the correct components, assembled with the correct ratings, without having to individually order accessories.

It is easy to meet Code requirements for selective coordination in a fully fused system. Siemens Type (ECS) Elevator Control disconnect switches utilize Class J fuses that easily coordinate with any upstream fuse by simply using a 2:1 line-side to load-side fuse ratio.

## Standards

- UL 98 Enclosed and Dead Front Switch – Guide 96NK3917, File E182262

## Catalog Number System

The following catalog numbering system defines an Elevator Control Switch construction.

| ECS | 1 | T2 | R2 | G | F1 | 3 | N | B | C |
|---|---|---|---|---|---|---|---|---|---|

**Elevator Control Switches**

**Ampere rating**

1 = 30 A
2 = 60 A
3 = 100 A
4 = 200 A
5 = 400A

**Control Transformer**

T2 = 208 V
T3 = 240 V
T1 = 480 V
T4 = 600 V

**Fire Safety Interface Relay (3PDT, 10 A, 120 V)**

R2 = 24 Vdc Coil
R1 = 120 Vac Coil

**Pilot Light ON**

G = Green
R = Red
W = White

**Fire Alarm Voltage Monitoring Relay (To Monitor Shunt Trip Voltage)**

F1 = Single-Pole③
F3 = Three-Pole

**Enclosure options (NEMA 1 Standard With No Suffix Designation Required)**

3 = NEMA 3R
D = NEMA 12
P = NEMA 4 Painted Steel

**Neutral Lug**

N = Isolated Full Capacity

**Auxiliary Contacts (1NO/1NC)**

B = Main Switch

**Surge Protection**

C = Integrated surge protection device

① 100 VA with Primary and Secondary fusing (120 V Secondary)
② For information on Siemens TPS3 03 protection device refer to product literature or Speedfax
③ F1 must be selected if 24 Vdc Coil for safety interface relay (R2) is selected

# Elevator Control Switches

## Standard Features

- 30-400 A, 600 Vac, 3-phase fused power switch
- 200 kA RMS assembly short-circuit current rating
- Shunt trip 120 V
- Control power terminal block
- Ground lug compliant with the National Electric Code
- Class J fuse mounting only (Class J fuses not included)
- Key to test switch
- Pilot light – "ON"
- Mechanically interlocked auxiliary contact for hydraulic elevators with battery backup (5 A, 120 Vac rated)
- Handle designed for hook stick operation
- OSHPD Special Seismic Certification Preapproval (OSP)

## Configurable Standard Features

- Control power transformer with fuses and blocks
- Fire safety interface relay
- Isolated neutral lug
- Fire Alarm Voltage Monitoring Relay (to monitor Shunt Trip Voltage)
- NEMA 3R, 4, and 12 enclosures available

## Optional Features

- Oversized 200% rated neutral option available where required by excessive non-linear loads
- Additional auxiliary contact (1NO / 1NC)
- Integrated surge protection device (TPS3 03). Externally viewable though window in door

## Other Options

Optional features include contact closure, i.e. battery lowering/door opening system. The B option offers support for the states of Arizona, Oregon, and Texas requirements to prevent "nuisance" fire alarms by over-riding the "Control Power not Available" signal when the Siemens Elevator control disconnect is manually (intentionally) turned off, and distinctive signaling for ON-OFF-TRIPPED conditions (Option B).

All Siemens Elevator Control elevator disconnect switches are UL-Listed and designed for safe access by qualified personnel. When maintenance or shutdown service is required, no energized parts are exposed inside the enclosure when the disconnect switch is manually turned to the OFF position. For proper maintenance safety precautions, always turn off incoming power to the Siemens Elevator Control elevator switch when possible. When servicing any live electrical equipment, always wear appropriate personal protective equipment.

## Shunt-Trip Operation

The disconnect means is a shunt-trip operated switch. The control power source for the shunt-trip operator is a 120 Vac supply originating in the Siemens Elevator Control switch. Current to the shunt-trip device is switched by an isolation relay, which is in turn controlled by the FACP.

The control signal may be either 24 Vdc from the FACP (Option R2) or a "dry" contact closure in the FACP (Option R1). In the case of a "dry" contact closure, the sensing voltage is 120 Vac originating in the Siemens Elevator Control switch.

A key test switch (Option K) is included for testing the shunttrip circuit.

## Supervisory Indication

Additionally, an optional separate relay can be specified to monitor the 120 Vac control power source in the Siemens Elevator Control switch. This relay (Option F1 or F3) is used to provide supervisory indication of "Control Power Available" as required by NFPA 72 Section 6.15.4.4.

### Transformer Fuse Details

| ECS Voltage/ Transformer Voltage | Primary Fuse (amps) | Secondary Fuse (amps) |
|---|---|---|
| 208/120 | FNQ-R-2 | FNM-1 1/4 |
| 240/120 | FNQ-R-2 | FNM-1 1/4 |
| 480/120 | FNQ-R-1 | FNM-1 1/4 |
| 600/120 | FNQ-R-1 | FNM-1 1/4 |

### $UL_A$ / $NEC_B$ Listed Horsepower Ratings

| | 30A | | 60A | | 100A | | 200A | | 400A | |

Fuse and Short Circuit Information
This switch is suitable for use with Class J Fuses ONLY.

① Max HP with time delay Class J Fuses.
② Max HP with non-time delay Class J Fuses.

# Type VBII 4 & 6-Pole Heavy Duty Safety Switches

**Selection**

## Application

4 & 6-pole Switches are commonly used as a disconnecting means for two-speed, two-winding motors. Fused switches provide both over current and short circuit protection. Non-fusible switches normally provide a local disconnection means for two-speed motors which are remote from their motor controller. 4-pole switches are also used in 3-phase, 4-wire circuits when a switching neutral is required. All 4 & 6-pole switches are service entrance rated.

## Description

4 & 6-pole switches are available in 30-200A ratings and in both fusible and non-fusible versions. 4-pole switches are supplied with either Type 1 or Type12/3R enclosures.
6-pole switches are available with either Type 12/3R or Type 4X stainless steel enclosures.

## Standards

- UL & CUL listed under file #E4776
- Meets UL98 for enclosed switches
- 4 & 6-Pole switches are suitable for use as service entrance
- Meets NEMA Standard KS-1 for enclosed switches
- Meets NEC wire bending space requirements

## Features

- Visible blade, double break switching action
- Highly visible ON/OFF indication
- Defeatable dual cover interlock
- Padlock option in OFF position
- All copper current carrying parts①
- Tangenital knockouts (Type 1, 4-pole switches)

**HNF662J**

■ Built to order. Allow 3-5 weeks for delivery.

① Lugs are aluminum alloy as standard. Optional copper body lugs are available.

② All 4 & 6-pole VBII switches are suitable for use as service equipment when a neutral is installed or equipment ground kit is properly connected.

③ Dual horsepower ratings: Std. – applies when non-time-delay fuses are installed. Max. – applies when time delay fuses are installed.

④ Fusible switches accept Class H Fuses as the standard. Class R & J fuses can also be installed and increase the rating from 10,000 to 200,000 AIC. For Class J, the load base is moved upward. For Class R fuses, rejection kits are required.

⑤ Supplied with factory installed ground lugs.

# Special Application Safety Switches

## Interlocked Receptacle Switches

### Application

Receptacle Safety Switches provide cord connection protection of heavy-duty portable equipment (welders, infrared ovens, batch feeders, portable conveyors, assembly line fixtures and tools, refrigerator trucks, etc.) under load or fault conditions.

### Standards

All receptacle switches are UL listed under file #E4776. Those with a viewing window are also CSA certified under file #1079316.

### Description①②

Type 12 and 4/4X Receptacle Safety Switches are available with 3-phase, 4-wire grounded type Crouse-Hinds Arkite™ 2 or Pyle-National receptacle, pre-wired and mounted with interlock linkage to the switch mechanism. Insertion or removal of the plug is prevented by the interlock linkage while the switch is in the "ON" position. Receptacle prevents operation of switch if incorrect plug is inserted.

HF362JCH

① Arktite™ is a registered trademark of the Crouse-Hinds Company. Plugs are not sold or supplied by Siemens.

② Indicates plug with maximum diameter cable bushing.

③ QuelArc™ is a registered trademark of the Pyle-National Company.

④ Ampere rating of both switch and receptacle.

⑤ Also rated Type 3R/3S.

⑥ Enclosure is constructed of Type 304 stainless steel.

# Special Application Safety Switches

## Type VBII Non-Metallic & 316 Grade Stainless Steel

### Application

Siemens Non-metallic switches provide a superior level of corrosion resistance to assure trouble free performance in the most severe conditions. Our non-metallic enclosures are constructed from fiberglass reinforced polyester and are extremely resistant to a wide range of corrosive atmospheres. They allow a wide range of operating temperatures and their insulating properties virtually eliminate problems caused by internal condensation.

### Description

30-200A, 600V Max, fusible and non-fusible switches are available in non-metallic enclosures. All are supplied with factory installed ground bars as standard.

### Type 4/4X Non-Metallic

▲ Built to order. Allow 6–8 weeks for delivery.

① Also used for 240 volt applications.

② Add "L" to end of catalog number for switches less line & load lugs with mounting hardware for crimp type or copper body lugs.

③ 200A switches are also rated 600V DC max.

④ 600V DC voltage and horsepower rating shown requires (2) poles to be connected in series.

⑤ Supplied with factory installed neutral.

# Enclosed Solar Photovoltaic (PV) Switches

## Application

Solar disconnect switches are designed to be used in the DC portion of photovoltaic power generation circuits. They incorporate powerful magnets within the switch line base which work in combination with a double break switching action to quickly dissipate the very hot arc that is generated when a 600V DC circuit is opened under load. These circuits are defined by article 690 of the NEC which requires the grounded conductor to be at ground potential at all times and therefore cannot be switched.

## Description

30-200A switches are available in both Type 1 and 3R enclosures and in both fusible and non–fusible versions. They are provided with an additional door mounted warning label as required by the NEC and are supplied with a factory installed equipment ground bar. They are built to UL98 requirements but are UL listed in file number E335018 as UL1741 photovoltaic disconnect switches. They are 3 pole switches that are approved to switch 3 separate 600V DC circuits (one per pole). The design incorporates many of the standard VBII switch features including a rolled out enclosure front flange, a large metal operating handle, oversized line and load lugs and large wire gutters. 1000VDC photovoltaic switches are UL98B listed for solar applications and comply with article 690 of the NEC. The new 400-600Amp switches are also UL98B listed at 600VDC and come in NEMA Type 3R.

* In pounds (lbs)

Note: All disconnects are rated at 10,000 AIC per UL requirements when used with or protected by Class K, J or R fuses rated at 600VDC.

## Description

Double throw switches are intended to transfer loads from one power source to another. All 2 & 3-pole double throw switches are suitable for use as service equipment including non-fusible versions when used in combination with a UL listed circuit breaker or fusible switch. All are UL Listed and both horsepower and load break rated. Switches are rated for use on systems up to 10,000A when protected with Class H fuses or 100,000A when protected with Class R or Class T fuses②. They can also be used to connect a single source of power to either of two loads. In this application it is necessary to field modify fusible switches so that the fuses are on the load side of the switching mechanism.

A cover interlock is provided on all ampere ratings. The operating handle may be padlocked in the off position.

① Use HS Type hubs for 30–200A switches. 400A and larger switches do not have hub provisions.

② All Heavy Duty double throw switches with a catalog number starting with "DT" are rated 200,000 AIC max. when protected by Class R, J or T fuses. Fuse ampere rating must not exceed switch ampere rating.

③ Move load base.

④ Will accept class T Fuses only.

⑤ 4-pole switches are not approved for service entrance.

⑥ Will accept class H fuses only.

⑦ General duty Stand-by Power Panel catalog number DTLNF213NR contains (2) 100A, 2P circuit breakers rated 120/240V AC & 10,000 AIC.

| 200 | 15 | 60 | 125 | 150 | 40 |
| 400-800 | — | 125 | 250 | 350 | 50 |

## Wire Ranges (Line, Load and Neutral) per NEC Requirements

### 30-200A – 2, 3 & 4-Pole Switches

| Switch Ampere Rating | Wire Range (Cu/Al) New VBII Design Line, Load and Neutral |
|---|---|
| 30 | (1) #14–6 |
| 60 | (1) #14–2 |
| 100 | (1) #14–1/0 AWG |
| 100 | (1) #14–1/0 AWG |
| 200 | (1) #6–250 kcmil |

### 400-1200A – 2 & 3-Pole Switches

| Switch Ampere Rating | Wire Range (Cu/Al) New VBII Design Line, Load and Neutral |
|---|---|
| 400 | (1) 1/0 AWG–750 kcmil or<br>(2) 1/0 AWG–250 kcmil |
| 600 | (2) 1/0 AWG–500 kcmil |
| 800 | (2) 1/0 AWG–750 kcmil or<br>(3) 1/0 AWG–500 kcmil |
| 1200 | (3) 1/0 AWG–600 kcmil or<br>(4) 1/0 AWG–500 kcmil |

### 400-800A – 4-Pole switches

| Switch Ampere Rating | Wire Range (Cu/Al) New VBII Design Line, Load and Neutral |
|---|---|
| 400 | (2) 1/0 AWG–300 kcmil or<br>(1) 1/0 AWG–750 kcmil |
| 600 | (2) 250-500 Kcmil |
| 800 | (3) 250-500 Kcmil |

## Replacement Parts – 2 and 3-Pole Switches Only①

| Description | | Catalog Number |
|---|---|---|
| Type 1, 3R & 12 Replacement Handle | 30-200A | HHD61234 |
| Type 4X Replacement Handle | 30-200A | HHD61234S |
| Replacement Handle | 400-1200A | HHD656 |

▲ Built to order. Allow 6–8 weeks for delivery.

① For "DT" VBII Type switches only.
② Also for fusible stainless & 400A Type 12 & 4x switches.
③ The following ground lugs are provided as standard in 200A and larger switches 200-(1) #14-4 Cu/Al 400-800A-(3) #6-250MCM Cu/Al.
④ One aux. required for normal and one required for emergency switch line base.

HR612

### Class R Fuse Clip Kits

All General Duty and Heavy Duty Switches are field convertible to accept Class R Fuse Clip Kits. The kits prevent the installation of Class H and K fuses (one kit required per 3-pole switch).

## Class R Fuse Clip Kits

| Catalog Number | Description |
|---|---|
| **HR21A** | 30A, 240V Kit (GD only) |
| **HR21** | 30A, 240V Kit (HD only) |
| **HR612** | 30A, 600V Kit |
| **HR22A** | 60A 240V Kit (GD only) |
| **HR62** | 60A, 600V Kit |

| **HR64** | 200A Kit |
| **HR656A** | 400A Kit |
| **HR656A** | 600A Kit |

### Class J Fusing

All 30-600A, 600V and 100-600A,240V fusible Heavy Duty Switches are field convertible to accept Class J fuses by moving the load base to a pre-drilled J fuse position. All 100-600A fusible General Duty switches can also be field converted to accept Class J fuses. ***Note:*** Only 600A switches require an adapter kit to be field converted to Class J.

## Class J Fuse Kits

| Catalog Number | Description |
|---|---|
| **HJ66A** | 600A, 240V/600V Kit |

HT63

### Class T Fuse Adapter Kits

All 100-1200A Switches are field convertible to accept Class T fuses. 800A switch can accept class T without adapter kit

## Class T Fuse Adapter Kits①

| Catalog Number | Description |

HP61

### Fuse Puller Kits

Fuse Puller Kits are field installable in 30-100A Type VBII Heavy Duty Switches (one kit required per 3-pole switch).

## Fuse Puller Kits

| Switch Ampere Rating | Fuse Puller Kit Catalog Number |
|---|---|
| 30 | **HP61** |
| 60 | **HP62▲** |
| 100 | **HP63▲** |

▲ Built to order. Allow 6–8 weeks for delivery.
① One kit per pole required.

### Full Coverage Shielding

Kits provide a clear plastic inner shield to prevent contact with any internal switch parts. The shield covers the complete opening of the switch. Fuses can be accessed via a shield-integrated hinged door.

## Full Coverage Shielding

| Switch Ampere Rating | Kit Catalog Number | Coverage | Qty to Order Per Switch |
|---|---|---|---|
| 30A HD Fusible① | **HSK61SSW** | Full | 1 |
| 60A HD① | **HSK62SSW** | Full | 1 |
| 100A HD① | **HSK63SSW** | Full | 1 |
| 200A HD① | **HSK64SSW** | Full | 1 |

### Service Entrance Compliant Internal Barriers

All HD and 400A, 600A GD come with line side shielding from the factory to reduce chance of incidental contact with live parts. When switches are utilized as a service entrance, additional internal shielding is required by the latest UL 98 standard and to meet NEC 230.62. These barriers are field installable.

## Internal Line side barrier kits

| Switch Ampere Rating | Kit Catalog Number | Coverage | Qty to Order Per Switch |
|---|---|---|---|
| 30-60A GD Non-fusible | **HSK212BA** | Line Side | 1 |

**HN264**

### 200% Neutral Kits

UL listed 200% Neutrals are available on 100-600A Heavy Duty Switches. They are typically used with non-linear transformers or where increased neutral ampacity/lug capacity is required.

## 200% Neutral Kits

| Switch Ampere Rating | Kit Catalog Number | Wire Range Line & Load Lugs (Cu/Al) |
|---|---|---|
| 100 | **HN263** | (2) #14-1/0 AWG |
| 200 | **HN264** | (2) #6 AWG-300 Kcmil |
| 400 | **HN656A** | (2) 1/0 AWG-600 Kcmil<br>(2) #6 AWG-300 Kcmil |
| 600 | **HN678A** | (4) 1/0 AWG - 600 Kcmil<br>(2) #6 AWG - 300 Kcmil |

**HN612**

### Neutral Kits

Standard Neutral Kits can be field installed in General and Heavy Duty Switches.

## Neutral Kits

| Switch Ampere Rating | Kit Catalog Number |
|---|---|
| 30 GD | n/a |
| 30 HD | **HN612** |
| 60 GD | **HN22A** |

| 800 & 1200 | **HN678** |

▲ Built to order. Allow 6–8 weeks for delivery.

① Not designed for use in Non-metallic 4X safety switches. Not designed for use with Auxiliary Contacts.

HA261234

HA265678

HLC612

HG261234

### Auxiliary Contacts

Auxiliary Contacts are available only for Heavy Duty Switches. The auxiliary contacts are available in 1 normally open and 1 normally closed or 2 normally open and 2 normally closed configurations. Siemens offers a PLC Auxiliary Switch (30-600A) that has very low resistance for low voltage and current typical in PLC circuits. All auxiliary contacts make after and break before main switch contacts.

## Auxiliary Contacts①

| Switch Ampere | Aux. Switch Catalog Number | Kit Ampere Rating 125V AC Max. | 250V AC Max. | 28V DC Max. | Horsepower Rating 125V AC Max. | 250V AC Max. |
|---|---|---|---|---|---|---|
| **With 1 NO & 1 NC Isolated Contacts** | | | | | | |

| 800-1200 | **HA365678** | 10 | 10 | — | 1/2 | 3/4 |

### Copper Lug Kits

Heavy duty switches are UL approved to accept field installed copper lug kits.

## Copper Lug Kits

| Switch Ampere Rating | Copper Lug Catalog Number | Description |
|---|---|---|
| 30–60 | **HLC612** | (9) Lugs/Kit #14-4 AWG Cu |
| 100 | **HLC63▲** | (9) Lugs/Kit #14-1/0 AWG Cu |
| 200 | **HLC64▲** | (9) Lugs/Kit #6 AWG-300 Kcmil Cu |
| 400-600 | **HCU656A■** | (1) Lugs/Kit #1/0 AWG-600 Kcmil Cu |
| 800–1200 | **HLC65678** | (1) Lugs/Kit #1/0 AWG-600 Kcmil Cu |

▲ Built to order. Allow 6–8 weeks for delivery.

■ Purchase field replacement kit along with lugs.

① Series A 400A and 600A switches use HA161234, HA261234 or HA361234 auxiliary contacts. Earlier 400A and 600A switches use HA165678, HA265678 or HA365678 auxiliary contacts.

### Quick Connects

They provide two point control power take-off capability and are normally used on two poles on the line side when it is required to have control power available when the switch is in the OFF position. They provide a mounting provision for standard ¼" quick connect terminal. Installed in the line or load side. 30A VBII switches have lugs UL listed to accept (2) wires per pole as standard so a 30A kit is not required.

## Quick Connects

| Catalog Number | Description |
|---|---|
| **HCQ62** | 60A 2 wire quick connect kit |
| **HCQ63** | 100A 2 wire quick connect kit |
| **HCQ64** | 200A 2 wire quick connect kit |

### Isolated Ground Kits

Isolated Ground Kits are available on 30-600A Heavy Duty Switches. They are normally used on circuits with a high content of computer or other electronic loading which require a ground which is isolated from the building ground and neutral circuits. The kit includes both isolated and grounded terminals as listed below.

## Isolated Ground Kits

| Switch Ampere Rating | Catalog Number | Number of Terminals Isolated | Grounded | Wire Range Per Terminal (Cu/Al) |
|---|---|---|---|---|
| 30–200 | **HG261234** | 2 | 2 | #14-4 AWG |
| 400–600 | **HG2656A** | 4 | 4 | 2/0-14 AWG<br>2/0-6 AWG |

### Equipment Ground Kits

Equipment Ground Lug Kits are available for all General and Heavy Duty Switches. They are field installable in Type 1 and Type 3R Switches and are factory installed as standard in Type 4 / 4X and Type 12 and also in all VBII 4&6-pole Switches.

## Equipment Ground Kits

| Switch Ampere Rating | Catalog Number | Number of Terminals | Wire Range Per Terminal (Cu/Al) |
|---|---|---|---|
| 30–200 GD | **HG61234** | 2 | #14-4 AWG |
| 30–200 HD | **HG61234** | 2 | #14-4 AWG |
| 400 & 600 | **HG656A** | 4 | 2/0-6 AWG |
| 800–1200 | **HG678** | 8 | #6 AWG-250 Kcmil |

### Interchangeable Hubs

Conduit hubs are available for Type 3R, 12 and 4 / 4X applications. 30-200A Type 3R Switches are provided with a conduit hub provision and a removable hub plate on their top rainshed.

| Conduit Size (inches) | Catalog Number | Used On |
|---|---|---|
| **Type 3R①** | | |
| Cover | **ECHA000** | 30–60A GD Only |

| 1 | **SSH100** | |
| 1 1/4 | **SSH125** | |
| 1 1/2 | **SSH150** | |
| 2 | **SSH200** | |

**Note:** 30 thru 200A. Type 3R Switches have removable hub plates on rainshed. 400A and larger Type 3R Switches have no provisions for mounting hubs. Drill or punch hole in the field to accommodate hub size desired.

### Field Replacement Kits and Neutral Barrier Kits

All Heavy Duty Switches are field convertible for (Crimp) type lugs. When compression lugs are required for 30-100A switches, a neutral barrier kit is required for 1-Phase, 3W or 3-Phase, 4W applications. When compression lugs are required on 400-1200A switches, lug mounting kits are required.

## Field Replacement Kits and Neutral Barrier Kits

| Switch Ampere Rating | Catalog Number | Kit Description |
|---|---|---|
| 30 | **HCL612** | Neutral Barrier Kit |
| 60 & 100 | **HCL623** | Neutral Barrier Kit |
| 400 | **HCM65A** | 240V/600V Fusible Kit |
| 400 | **HNCM65A** | 240/600V Non-Fusible Kit |
| 600 | **HCM66A** | 240V/600V Fusible Kit |
| 600 | **HNCM66A** | 240V/600V Non-Fusible Kit |
| 800④ | **HCL65678■** | 1 Pole, Compression Lug Mounting Kit |

### Lugs

30 & 60A HD Switches are suitable for use with 60° or 75°C wire. 100-1200A are suitable for use with 75°C rated wire.

### Multiple Padlock Accessory

A tamper-proof device to provide for multiple padlocking to meet OSHA or plant requirements. Accepts up to 6 1/4" padlocks. Catalog number **SL0420**. Standard Carton-12.

**SSH125**

**ECHV300**

**ECHS200**

**SL0420**

■ Built to order. Allow 3-4 weeks for delivery.

① Hubs suitable for 3R Switches.
② 400-1200A require an additional Hub Gasket Kit with use of a Hub. Catalog number HVGK is a suitable gasket kit for this.
③ Also suitable for Type 12 applications.
④ Provides mounting for (2) compression lugs per phase on line or load.

***For inches / millimeters conversion, multiply inches by 25.4.**

① (3) Mounting holes supplied (1 at top).
② (4) Mounting holes provided.
③ These switches are not Type VBII design.
④ Drip hood not shown but provided on Type 3R enclosures.

# Enclosed Bolted Pressure Switches & Safety Switch

## Replacement Parts

For enclosed bolted pressure contact switches order as lug-in/lug-out single section BPS main switchboards using either the SPACE 2000 Switchboard EPM or COMPAS.

① Three lugs included in kit.
② Includes lugs.
③ Lugs not included.
④ One lug per kit.
⑤ One per switch required unless otherwise noted.
⑥ One required per pole.
⑦ For type 4/4X stainless steel switches add "S" to end of catalog number.
⑧ For replacement door for heavy duty switches add "DOOR" to end of switch catalog number.
⑨ Lugs included with base only, not available separately.
⑩ Lug caps only—2 line side caps and 2 load side caps per kit.

### Additional poles and auxiliary switches

N switching contacts

N/PE terminals

Auxiliary switches

### Operating mechanisms

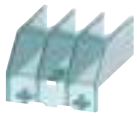
Rotary operating mechanisms for front or panel mounting (center hole)

Knob-operated mechanisms for front or panel mounting (center hole)

Door-coupling rotary operating mechanisms

Door-coupling knob-operated mechanisms

### Other accessories

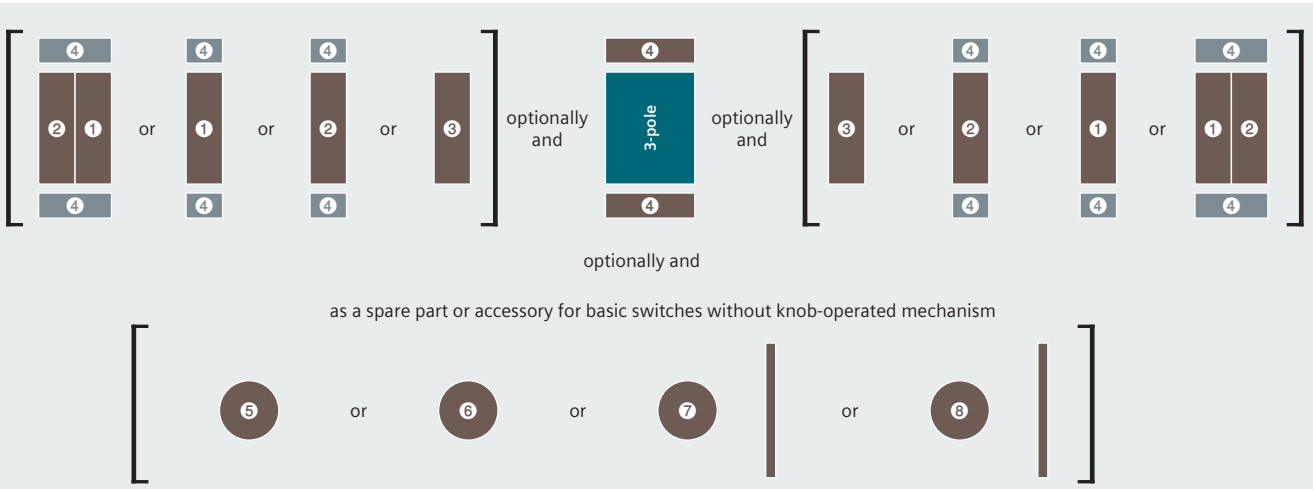


Terminal covers, 1 and 3-pole

Inscription labels

**Note:** You will find a detailed range of accessories with the basic units.

# Mounting concept and accessories



**Legend**

❶ N switching contact [1)]
❷ N/PE terminal
❸ Auxiliary switch
❹ Terminal cover
❺ Rotary operating mechanism, center-hole mounting
❻ Knob-operated mechanism, center-hole mounting
❼ Door-coupling rotary operating mechanism, center-hole mounting
❽ Door-coupling knob-operated mechanism, center-hole mounting

[1)] The N switching contact ❶ first has to be mounted on the basic unit

## Mounting types

**You will find further information in the configuration manual: sie.ag/2UlrAvy**

### Front mounting

The switches for front mounting are mounted on the inside of covers, side panels or, if applicable, control cabinet doors (depending on the applicable standard and switching function). The switches are mounted via the 22.5 mm diameter center hole.

### Panel mounting

The switches for panel mounting are snapped onto 35 mm standard mounting rails according to EN 60715 or screw-mounted on mounting panels. The actuators are connected to the lower section of the switch through a door coupling, which can be released in its zero position, and a 300 mm long switch shaft. When the control cabinet door is open, the switch can be protected against inadvertent operation by removing the switch shaft from the lower section of the switch. The overall depth can be adapted to individual requirements by adjusting the switch shaft length.

### Distribution board mounting

The switches for distribution board mounting are suited for operation in distribution boards and for switching inside control cabinets or distributors. They have cap and mounting dimensions acc. to DIN 43880 and can be fitted under the same cover together with miniature circuit breakers. The selector switches can be locked in their OFF position with no more than one padlock with a hasp thickness of 4 to 6 mm.

### Basic switches without knob-operated mechanism

For the basic switch variant without knob-operated mechanism, the appropriate door-coupling rotary operating mechanism can be ordered separately.

# 3LD switch disconnectors

## System overview of 3LD2 switch disconnectors

### Basic units for front mounting

3P rotary operating mechanisms

3P knob-operated mechanisms (3LD23/3LD24)

3P knob-operated mechanisms

3P+N rotary operating mechanisms

3P+N knob-operated mechanisms (3LD23/3LD24)

3P+N knob-operated mechanisms

6P rotary operating mechanisms

### Basic units for panel mounting

3P rotary operating mechanisms

3P knob-operated mechanisms (3LD23/3LD24)

3P knob-operated mechanisms, defeatable

3P+N rotary operating mechanisms

3P+N knob-operated mechanisms (3LD23/3LD24)

3P+N knob-operated mechanisms, defeatable

6P rotary operating mechanisms

### Basic units for installation in distribution boards/enclosures, DC

3P knob-operated mechanisms

3P+N knob-operated mechanisms

8P DC isolators

### Additional poles and auxiliary switches

N switching contacts

N/PE terminals (through-type)

Auxiliary switches (standard version)

Auxiliary switch for mounting on the front new

### Operating mechanisms

Rotary operating mechanisms for 4-hole and center-hole mounting

Knob-operated mechanisms (3LD23/3LD24)

Switching shafts

Coupling pieces without ON-lock

Assembly tools for center-hole mounting

### Other accessories

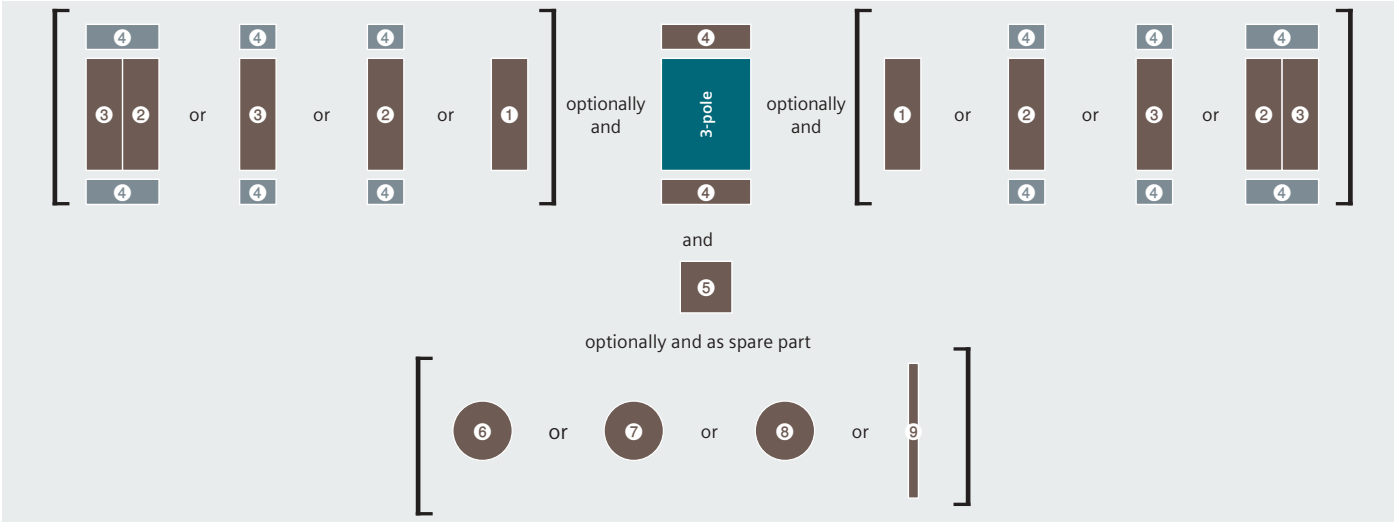
Terminal covers, 1-pole

Terminal covers, 3 and 4-pole

Inscription labels (with and without inscription)

**Note:**
You will find a detailed range of accessories with the basic units.

# Mounting concept and accessories



**Legend**

❶ Auxiliary switch
❷ N switching contact [1)]
❸ N/PE terminal
❹ Terminal cover
❺ Auxiliary switch for mounting on the front [2)]
❻ Rotary operating mechanism, center-hole mounting
❼ Rotary operating mechanism, four-hole mounting
❽ Knob-operated mechanism, four-hole mounting
❾ Switching shaft (300 or 600)

[1)] The N switching contact ❷ first has to be mounted on the basic unit
[2)] Can only be used with four-hole front mounting and panel mounting

## Mounting types

**You will find further information in the configuration manual: sie.ag/2UlrAvy**

### Front mounting

The switches for front mounting are mounted on the inside of covers, side panels or, if applicable, control cabinet doors (depending on the applicable standard and switching function). In addition to the 4-hole fastening of the handle, up to 63 A (3LD25) fastening with the 22.5 mm diameter center hole can also be chosen.

### Panel mounting

The switches for panel mounting up to 125 A (3LD28) are snapped onto 35 mm standard mounting rails according to EN 60715 or screw-mounted on mounting panels. The switches for 160 and 250 A (3LD23/3LD24) are exclusively screwed onto mounting panels.
The actuators are connected to the lower section of the switch through a door coupling, which can be released in its zero position, and a 300 mm long switch shaft. When the control cabinet door is open, the switch can be protected against inadvertent operation by removing the switch shaft from the lower section of the switch. The overall depth can be adapted to individual requirements by adjusting the switch shaft length.

### Distribution board mounting

The switches for distribution board mounting are suited for operation in distribution boards and for switching inside control cabinets or distributors. Up to 125 A (3LD28), they have cap and mounting dimensions acc. to DIN 43880 and can be fitted under the same cover together with miniature circuit breakers.

### DC isolators

The DC isolators in the enclosure are suitable for disconnecting loads of up to 800 V DC due to their 8-pole design. To provide additional safety, the isolators can be locked in the 0 position.

## 3LD2 main control switches, front mounting

3LD5420 (3-pole)

3LD5420 (4-pole)

### Basic units, panel mounting with direct operating mechanism

3LD5000 (3-pole)

3LD5000 (4-pole)

3LD5400 (3-pole)

3LD5400 (4-pole)

### Basic units, panel mounting with door-coupling rotary operating mechanism

3LD5010 (3-pole)

3LD5010 (4-pole)

3LD5410 (3-pole)

3LD5410 (4-pole)

### Additional poles and auxiliary switches

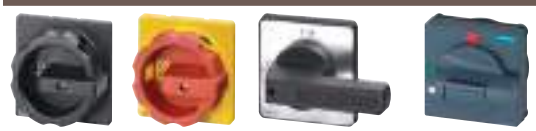
N switching contact

N/PE terminals (through-type)

Auxiliary switches (standard version)

Auxiliary switch for mounting on the front

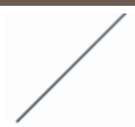
### Operating mechanisms



Rotary operators for four-hole mounting

Coupling heads with and without tolerance compensation

Supplementary handles for UL508A/NFPA79



Switching shafts

### Other accessories

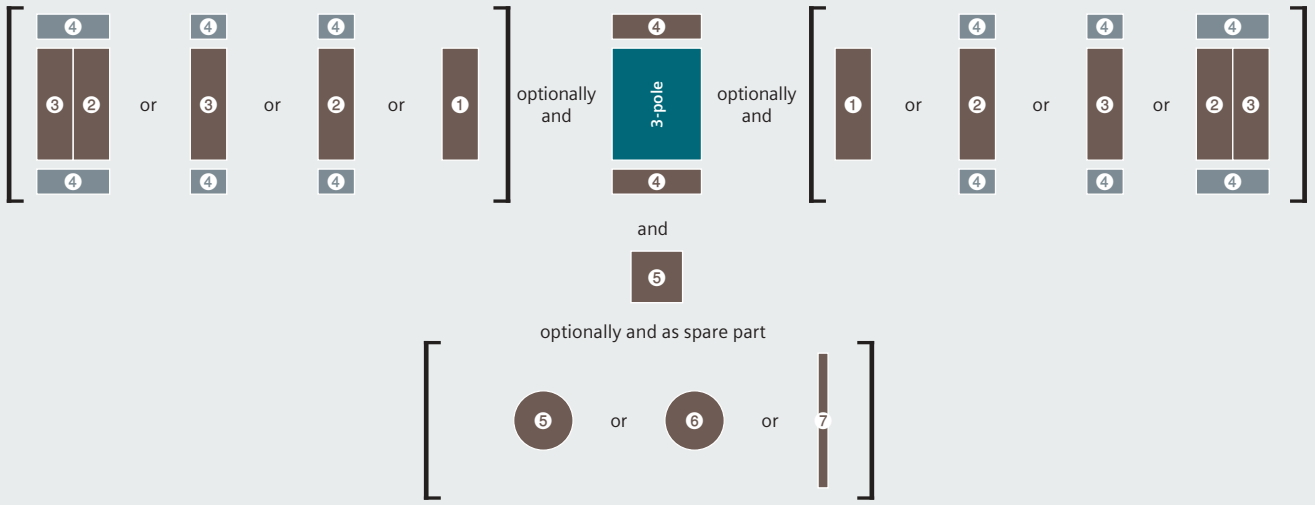
Terminal covers, 1-pole

Terminal covers, 3 and 4-pole

Inscription labels (with and without inscription)

**Note:**
You will find a detailed range of accessories with the basic units.

## Mounting concept and accessories



**Legend**

❶ Auxiliary switch
❷ N switching contact [1)]
❸ N/PE terminal
❹ Terminal cover
❺ Rotary operating mechanism, four-hole mounting
❻ Knob-operated mechanism, four-hole mounting
❼ Switching shaft (300 oder 600 mm)

[1)] The N switching contact ❷ first has to be mounted on the basic unit

### Main control switches acc. to UL

The certification according to UL489 makes the 3LD5 UL ideal for use as a main control switch for machinery and plants for export to the NAFTA states. The variety of accessories makes it especially suitable as a main disconnect switch for industrial machinery. The switch is also certified according to UL508 and can also be used as a manual motor controller.

### Mounting types

#### Front mounting of basic units

The switches for front mounting are mounted on the inside of covers, side panels or, if applicable, control cabinet doors (depending on the applicable standard and switching function). Installation is achieved by 4-hole mounting of the handle. This switch is especially suitable when door interlocking is not required or is implemented in a different way.

#### Panel mounting with direct operating mechanism

The switches for panel mounting with direct operating mechanism up to 30 A are snapped onto 35 mm standard mounting rails according to EN 60715 or screw-mounted on mounting panels. The switches for 100 to 160 A (3LD54 ... 3LD58) are exclusively screwed onto mounting panels.

#### Basic units, panel mounting with door-coupling rotary operating mechanism

The switches for panel mounting up to 30 A (3LD50) are snapped onto 35 mm standard mounting rails according to EN 60715 or screw-mounted on mounting panels. The switches for 100 to 160 A (3LD54 ... 3LD58) are exclusively screwed onto mounting panels. The actuators are connected to the lower section of the switch through a door coupling, which can be released in its zero position, and a 300 mm long switch shaft. The rotary operating mechanisms are also defeatable, i.e. it is possible to open the control cabinet door with a deliberate action while the switch is in the ON position. To meet the requirement acc. to UL508A/NFPA79, a supplementary handle can be mounted on the switch. Combined with the intermediate handle, the shaft can no longer be removed.

# 3LD switch disconnectors

## 3LD2 Rotary Disconnect Switches in Non-Metallic Enclosures

### Description

16–125A non-fusible switches are available in fiberglass reinforced polycarbonate enclosures which are UL approved as Type 12 & 4X and for either indoor or outdoor use. All are horsepower and load break rated. All are panel mounted and are either supplied with factory installed aux. contacts or will accept contact kits. All are compact in size while providing ample wiring space for copper line & load conductors.

### Siemens Enclosed Rotary Disconnect Switches

- 16–125A, Non-Fusible
- 600VAC max. rated
- Available in both Type 12 and 4X non-metallic enclosures
- Listed and marked "suitable for use as motor disconnect" per NEC Section 430-109
- Switches are UL listed under File No. E47705 and are CSA certified under File No. 203576
- IEC 60947-3 rated and CE marked (enclosures are IP65 rated)
- HP rated
- 16–63A switches have factory installed ground bars.
- Switches are provided with knockouts
- Padlockable in OFF position with up to (3) padlocks
- Enclosures are constructed from Makrolon 9425.

① For use as supplemental protection on the load side of the branch circuit over current protective device.
② Factory installed ground lugs supplied as follows: 16-30A #14-10 Cu, 63A #14-8 Cu. Ground lug not provided and is not available on catalog numbers 3LD2264-2TW51-0US2 and 3LD2264-2TW53-0US2.
③ 6.38 inches high including mounting feet.
④ 7.85 inches high including mounting feet.
⑤ 16-63A 3LD switches are also rated 5kA at 600VAC max when protected by a 3RV type MSP of the same or lesser ampere rating.

# Type VBII (30-600A) with Flange Mounted Operating Handle

## Features and Ordering Information

### Features

- 30-600A, 600VAC and DC ratings
- 240 & 600V AC switches are UL Recognized under file number E121152, Vol. 3 and CSA certified under file number 154852
- 600V DC Photovoltaic switches are UL Recognized under file number E335018, Vol. 3 and are rated to switch 3 separate 600V DC circuits
- Visible blade quick make and break switching action
- Panel and Flange mounted assemblies facilite installation
- Panel mounted switches are variable depth
- Short circuit rating of 10,000 AIC with class H fuse, and of 200,000 AIC with class R or J fuses. PV switches are rated 10,000 AIC at 600V DC with 600V DC rated class K, J or R fuses.
- Flange mounted handles rated as Type 1, 3R & 12 or 4X are padlockable in the off position with up to (3) padlocks with 5/16 hasps
- Meets UL98 requirements and suitable for both main and branch circuit applications
- A complete line of aux contacts are available
- Load break and horsepower rated
- Defeatable cover interlock standard with all handles
- Meets NFPA79 requirements
- Seismic qualified — complies with the 2010 California Building Code (CBC) — and with the International Building Code (IBC) — Compliance Level SDS = 1.85 g

**VBFS361, VBLK1 & VBH1**

**VBFS363F**

**VBNFS365, VBLK4 & VBH2**

### Ordering Information

1. Determine the ratings required (amps, volts, HP, Fusible, NF), the mounting needed (Panel or Flange), and select the appropriate switch.
2. For panel mounted switches with a rigid operating shaft (30-600A), order panel mounted switch, flange mounted operating handle & rigid linkage kit based on depth required.
3. For panel mounted switches with a Max-Flex operator, order panel mounted switch, Max-Flex Handle & Adapter Kit and drive cable.
4. Select accessories if required.

# Type VBII (30-600A) with Flange Mounted Operating Handle

① Rated 5 HP at 250V DC.
② Rated 10 HP at 250V DC.
③ 600V DC & 600V DC horsepower rating shown requires (2) poles to be connected in series.
④ Std. - applies when non-time delay fuses are used. Max. - applies when time delay fuses are used.
⑤ Includes line base, load base, operating mechanism and line and load lugs. Order operating handle and linkage kits from tables on pages 18/85 or 18/86.
⑥ Includes line base, load base, operating mechanism line and load lugs plastic operating handle and required linkage.
⑦ All photovoltaic switches are rated to be used with 3 separate 600V DC circuits.
⑧ Fusible switches accept Class K or R fuses as standard and Class J fuses by relocating the load base.
⑨ Rated 250V DC max and 50HP at 250V DC.
⑩ Please add letter "M" to the end of catalog number for metal handle.

### Cable Kit

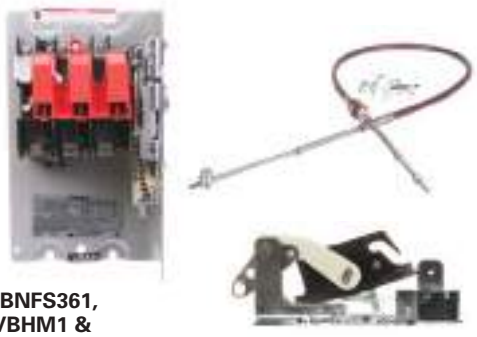
For use with 30-200A panel mounted switches and Max-Flex handle and adapter kit.

| Catalog Number | Description |
|---|---|
| **FHOEC036** | 36" long drive cable |
| **FHOEC048** | 48" long drive cable |

### Max-Flex™ Handle and Adapter Kit

(Type 1, 12, 3R & 4X) Use with 30-200A panel mounted switches and cable kit.

| Catalog Number | Operating Handle Description |
|---|---|
| **Plastic Handles** | |
| **VBHM1** | 30-200A Type 1, 3R, 12 and 4X |
| **Metal Handles** | |
| **VBHM2** | 30-200A Type 1, 3R and 12 |
| **VBHM2X** | 30-200A Type 4X |



**VBNFS361, VBHM1 & FHOEC036**

# Type VBII (30-600A) with Flange Mounted Operating Handle

## Selection & Accessories

### Flange Mounted Operating Handles

For use with Panel Mounted Switches. Plastic handle is included with Flange Mounted Switches as standard.

| Catalog Number | Operating Handle Description |
|---|---|
| **Plastic Handles** | |
| VBH1 | 30-200A Type 1, 3R & 12 |
| VBH14X | 30-200A Type 4X |
| **Metal Handles** | |
| VBH112 | 30-200A Type 1, 3R & 12 |
| VBH14 | 30-200A Type 4X |
| VBH2 | 400A Type 1 & 12 |
| VBH2R | 400 & 600A Type 1, 3R & 12 |
| VBH24X | 400 & 600A Type 4X |

HR612

### Class R Fuse Clip Kits

These kits prevent the installation of Class H and K fuses (one kit required per switch).

#### Class R Fuse Clip Kits

| Catalog Number | Description |
|---|---|
| HR21 | 30A, 240V Kit (HD only) |
| HR612 | 30A, 600V Kit/60A, 240V Kit |
| HR62 | 60A, 600V Kit |
| HR63 | 100A Kit |
| HR64 | 200A Kit |
| HR656 | 400A/600A Kit |

### Internal Door Latch Kits

For use with enclosures with door mounted latching bar. Required when a flange mounted switch is mounted in a Hoffmann or Rittal enclosure provided with an AB cutout.

| Catalog Number | Description |
|---|---|
| DKR2 | 2 point (for use with enclosures less than 40" high) |
| DKR3 | 3 point (for use with enclosures 40" or larger in height) |

### Rigid Linkage Kits

For use with Panel Mounted Switches. Not required for Flange Mounted Switches.

| Catalog Number | Switch Ampere Rating | Enclosure Depth① | |
|---|---|---|---|
| | | Min | Max. |
| VBLK1 | 30-200 | 6.94② | 6.94② |
| VBLK2 | 30-200 | 6.94② | 19.0 |
| VBLK3 | 400 & 600 | 9.00 | 8.75 |
| VBLK4 | 400 & 600 | 9.00 | 19.0 |

HT63

### Class T Fuse Adapter Kits

100-600A fusible switches are field convertible to accept Class T fuses. 400-600A switches are field convertible to accept Class T fuses by moving the load base to a pre-drilled T fuse position.

#### Class T Fuse Adapter Kits③

| Catalog Number | Description |
|---|---|
| HT23 | 100A, 240V Kit |
| HT63 | 100A, 600V Kit |
| HT24 | 200A, 240V Kit |
| HT64▲ | 200A, 600V Kit |

### Class J Fuse Provisions

All 30-600A, 600V fusible switches are field convertible to accept Class J fuses by moving the load base to a pre-drilled J fuse position.

### Window Kits (Type 1, 12, 3R and 4x)

Allows viewing of visible blades and of indicating fuses through 200A.

| Catalog Number | Description |
|---|---|
| VBWK1 | 30A Window Kit |
| VBWK2 | 60 & 100A Window Kit |
| VBWK3 | 200-600A Window Kit |

### NEW Quick Connects

They provide two point control power take-off capability and are normally used on two poles on the line side when it is required to have control power available when the switch is in the OFF position. They provide a mounting provision for standard ¼" quick connect terminal. Installed in the line or load side. 30A VBII switches have lugs UL listed to accept (2) wires per pole as standard so a 30A kit is not required.

| Catalog Number | Description |
|---|---|
| HCQ62 | 60A 2 wire quick connect kit |
| HCQ63 | 100A 2 wire quick connect kit |
| HCQ64 | 200A 2 wire quick connect kit |

HN612

### Neutral Kits④

Standard Neutral Kits can be field installed in 30-100A switches.

#### Neutral Kits

| Switch Ampere Rating | Kit Catalog Number |
|---|---|
| 30A 600V, 60A 240V | HN612 |
| 60A, 600V & 100A | HN623 |

### 200% Neutral Kits④

UL listed 200% Neutrals are available on 60 & 100A switches. They are typically used with non-linear transformers or where increased neutral ampacity/lug capacity is required.

#### 200% Neutral Kits

| Switch Ampere Rating | Kit Catalog Number | Wire Range Line & Load Lugs (Cu/Al) |
|---|---|---|
| 60 & 100A | HN263 | (2) #14-1/0 AWG |

▲ Built to order. Allow 6–8 weeks for delivery.
① Dimensions (min. & max.) from enclosure mounting pan to outside surface of enclosure handle mounting flange.
② 7.12 for 200A switches.
③ One kit per pole required.
④ UL approved (not CSA certified).

## Auxiliary Contacts

The auxiliary contacts are available in 1 normally open and 1 normally closed or 2 normally open and 2 normally closed configurations. Siemens offers a PLC Auxiliary Switch (30-200A) that has very low resistance for low voltage and current typical in PLC circuits. All auxiliary contacts make after and break before main switch contacts.

| Switch Ampere Rating | Aux. Switch Catalog Number | Kit Ampere Rating | | | Kit Horsepower Rating | | |
|---|---|---|---|---|---|---|---|
| | | 125V AC Max. | 250V AC Max. | 28V DC Max. | 125V AC Max. | 250V AC Max. | 28V DC Max. |
| **With 1 NO & 1 NC Isolated Contacts** | | | | | | | |
| 30-200 | **HA161234** | 10 | 10 | — | 1/2 | 3/4 | — |
| 400-600 | **HA165678** | 10 | 10 | — | 1/2 | 3/4 | — |
| **With 2 NO & 2 NC Isolated Contacts** | | | | | | | |
| 30-200 | **HA261234** | 10 | 10 | 7 | 1/2 | 3/4 | — |
| 400-600 | **HA265678** | 10 | 10 | 7 | 1/2 | 3/4 | — |
| **Low Current PLC Type with 1 NO & 1 NC Gold Plated Contacts** | | | | | | | |
| 30-200 | **HA361234** | 10 | 10 | — | 1/2 | 3/4 | — |
| 400-600 | **HA365678** | 10 | 10 | — | 1/2 | 3/4 | — |

## Fuse Puller Kits

Fuse Puller Kits are field installable in 30-100A Type VBII Heavy Duty Switches (one kit required per 3-pole switch).

| Switch Ampere Rating | Fuse Puller Kit Catalog Number |
|---|---|
| 30 | **HP61** |
| 60 | **HP62▲** |
| 100 | **HP63▲** |

## Copper Lug Kits

All switches are UL approved to accept field installed copper lug kits.

| Switch Ampere Rating | Copper Lug Catalog Number | Description |
|---|---|---|
| 30–60 | **HLC612** | (9) Lugs/Kit #14-4 AWG Cu |
| 100 | **HLC63▲** | (9) Lugs/Kit #14-1/0 AWG Cu |
| 200 | **HLC64▲** | (9) Lugs/Kit #6 AWG-300 Kcmil Cu |
| 400–600A | **HLC65678** | (1) Lugs/Kit #1/0 AWG-600 Kcmil Cu |

## Equipment Ground Kits

Equipment Ground Lug Kits are available for all switches.

| Switch Ampere Rating | Catalog Number | Number of Terminals | Wire Range Per Terminal (Cu/Al) |
|---|---|---|---|
| 30–200 | **HG61234** | 2 | #14-4 AWG |
| 400 & 600 | **HG656** | 4 | #6 AWG-250 Kcmil |

## NEW Internal Shield Kits (for fusible switches)

Kits provide a "skirt" that encloses the VBII switch and also a clear plastic inner door to prevent accidental contact with live parts. Test probe holes are provided and fuses can be replaced without removal of kit.

| Switch Ampere Rating | Shield Kit Catalog Number |
|---|---|
| 30A | **HSK61** |
| 60-100A | **HSK623** |
| 200A | **HSK64** |

▲ Built to order. Allow 6–8 weeks for delivery.

## Lugs

30 & 60A switches are suitable for use with 60° or 75°C wire. 100–600A switches are suitable for use with 75°C rated wire. All switches are supplied with factory installed line and load lugs.

### Wire Ranges (Line, Load and Standard Neutral)

| Switch Ampere Rating | UL Approved Wire Range | Lug Wire Range |
|---|---|---|
| 30 | #14-6 AWG (Cu/Al) | #14-2 AWG (Cu/Al) |
| 60 | #14-2 AWG (Cu/Al) | #14-2 AWG (Cu/Al) |
| 100 | #14-1/0 AWG (Cu/Al) | #14-1/0 AWG (Cu/Al) |
| 200 | #6 AWG-300 Kcmil (Cu/Al) | #6 AWG-300 Kcmil (Cu/Al) |
| 400 | 1/0 AWG-750 Kcmil (Cu/Al) or<br>(2) 1/0 AWG-250 Kcmil (Cu/Al) | (1) 1/0 AWG-750 Kcmil (Cu/Al) or<br>(2) 1/0 AWG-250 Kcmil (Cu/Al) |
| 600 | (2) 1/0 AWG-750 Kcmil (Cu/Al) or<br>(4) 1/0 -250 Kcmil (Cu/Al) | (2) 1/0 AWG-750 Kcmil (Cu/Al) or<br>(4) 1/0 AWG-250 Kcmil (Cu/Al) |

## Approximate Dimensions

Mounting bracket shown with handle installed is supplied with Flange Mounted Switches only. All Panel Mounted Switches have a "L" shaped mounting pan with a line base, load base (if fusible) and mechanism installed.

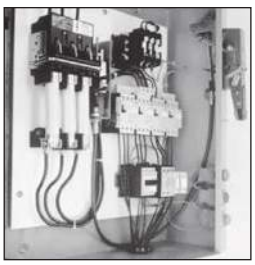
① Dimension C for panel mounted switches indicates the minimum width from the left hand edge of the switch mounting pan to the right hand inside surface of the enclosure.

# Type MCS (30-200A) — Switches, Fuse and No Fuse Kits

**Selection**

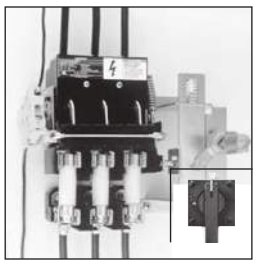
## Features

- 30, 60, 100 and 200 Ampere Switches
- UL Recognized (file # E121152 vol. 1 & 2) and CSA Certified
- Simple Mounting — with an integral switch and over center mechanism
- Horsepower & load break rated
- Compact Size
- Visible Blade Contacts
- Rugged Construction — with a short circuit current rating of 10,000 amps with Class H or 200,000 amps at 600V maximum AC, when fused with Class R or Class J fuses
- Available with three operator handle options, allowing flexible placement of switch
- Field Installable Auxiliary Contacts
- Flexible Fuse Class Configurations
- Flange mounted handles meet NFPA79 requirements



**Type MCS Disconnect Switch with Max-Flex™ handle operator**

**Type MCS Disconnect Switch with fixed-depth, flange-mounted handle**



**Type MCS Disconnect Switch with rotary handle**

## Ordering Information

1. Select the basic switch size you need (30, 60, 100 or 200 ampere).
2. Check the switch selected against the maximum horsepower rating required for our application. "L" or "R" suffix on switch catalog numbers denotes left or right-handed mechanism drive.
3. Choose either fuse or no fuse kit from chart below.
4. Check "Minimum Dimensions" on page 18/90 for installation space requirements.
5. Select from the list of handle operators, the type which best suits your application. Handle operators can be selected from the next page.

### Basic Switches

▲ Built to order. Allow 6–8 weeks for delivery.
① For "copper only" connectors, order as follows: **Fusible**—order standard switch, standard fuse kit and copper only no fuse kit. **Non-Fusible**—order standard switch and copper only no fuse kit.
② Includes both line and load lugs.
③ For Class R fuses order Class H kit from this table and the Class R conversion kit from the next page.
④ HP ratings for time delay fuses and for 250V DC also apply to Non-fusible switches.

| | 100A/600V | 7.38 | 7.59 | 10.6 | J |
| MCS620 | 200A/240V | 9.17 | 9.00 | 14.7 | H, K, R |
| | 200A/600V | 9.17 | 9.00 | 17.2 | H, K, R |
| | 200A/600V | 9.17 | 9.00 | 13.32 | J |

"A" – Dimension is measured from each cross bail pin.

"B" – Dimension is measured from line side barrier to load side barrier.

"C" – Dimension is measured from line side terminal of switch to load side terminal of fuse load base.

▲ Built to order. Allow 6–8 weeks for delivery.

①For Type 4 and 4X applications, order handle only Catalog Number
100A - **FDH104** 200A - **FDH204**

②For Type 4 and 4X applications, order handle only Catalog Number **FHOHS4**

③Standard cable length is 36 inches. Alternate lengths are available as follows:

| Length | Amps | Cat. No. |
|---|---|---|
| 48" | 30–100 | **FHOEC048** |
| 60" | 30–100 | **FHOEC060** |
| 48" | 200 | **FHOJC048** |
| 60" | 200 | **FHOJC060** |

④For Type 4 and 4X applications, order handle only Catalog Number **RHOH4**

⑤For Type 3 and 3R applications, order handle only Catalog Number **RHOH**

⑥Min. enclosure depth from mounting pan to handle mounting surfaces: 30-100A 6.44 Inches
200A 10.93 Inches

*For millimeters multiply inches by 25.4.

# Type CFS Compact Fusible Switches

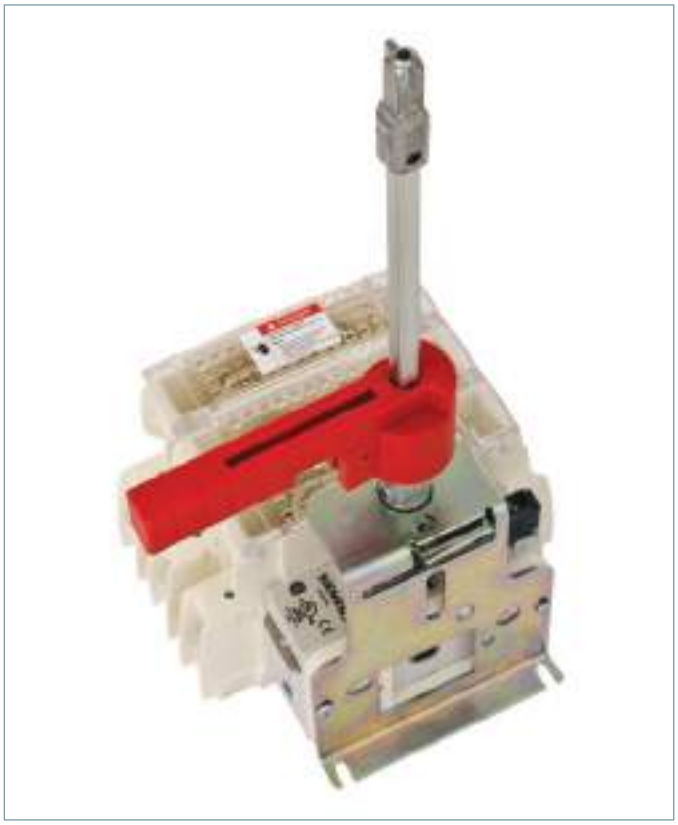
## Description

Siemens Type CFS compact fusible switches meet UL 98 requirements and can be used in either service entrance or branch circuit applications. 30-800A, 3 pole switches are offered and are all rated 600V AC maximum. 30A switches are available with provisions for either Class CC or J fuses. 60A and larger switches provided with Class J fuse provisions can be used in non-fusible applications with field installable no-fuse kits.

All are open style, designed to be panel mounted and are UL listed under file number #E121152 or #E68312 and CSA certified under file number #222227. A variety of door mounted rotary operators are available with Type 1, 3R, 12 or 4/4X ratings.

## NFPA79 Kits

CFSNFPA1 AND CFSNFPA2N kits provide an internal handle and padlocking means to comply with article 5.3.4.2 of the NFPA-2002 standard.



## Catalog Numbering System

**CFS Switches**
*Compact Fusible Switch*

| CFS | 3 | 6 | 1 | J | 5 | N |
|---|---|---|---|---|---|---|

- Number of poles 3 = 3
- Max. Voltage Rating 6 = 600V
- Ampere rating
  - 1 = 30A
  - 2 = 60A
  - 3 = 100A
  - 4 = 200A
  - 5 = 400A
  - 6 = 600A
  - 7 = 800A
- Fuse provisions type
  - C = Class CC
  - J = Class J with right hand mechanism
  - JL = Class J with left hand mechanism
  - L = Class L with right hand mechanism
- Max. AIC rating
  - 5 = 100kA
  - Omit = 200kA J fused
- Version
  - N = New size reduced version
  - N1 = New 100kA 60A switch

**Operating Handles**
*CFS type handle*

| CFSH | 10 | R | 12 | N |
|---|---|---|---|---|

- Shaft cross section
  - 5 = 5 mm
  - 10 = 10 mm
  - 12 = 12 mm
- Handle color and length
  - B = Black & blue, short
  - R = Red & yellow, short
  - BL = Black & blue, long
  - RL = Red & yellow, long
- NEMA type
  - 12 = 1, 3R and 12
  - 4 = 1, 3R, 12 and 4/4X
- Version
  - N = New version

**CFS Operating Shafts**
*CFS type shaft*

| CFSS | 10 | 200 | H | N |
|---|---|---|---|---|

- Shaft cross section
  - 5 = 5 mm
  - 10 = 10 mm
  - 12 = 12 mm
- Shaft length
  - 200 = 200 mm
  - 400 = 400 mm
- Switch compatibility
  - Omit = 30A, 100kA
  - H = 100 or 200 kA
- Version
  - N = New version

# Type CFS Compact Fusible Switches

## Features and Ordering Information

### Features

- 30 - 800A ratings
- UL Listed under file #E121152 & CSA Certified under file #222227
- Door mounted rotary handles with defeatable cover interlock
- Meets UL requirements for both main and branch circuit applications
- Compact size
- 100kA with Class CC fuses or up to 200kA with Class J fuses
- Load break and horsepower rated
- Quick make and break operation
- All handles are padlockable with up to (3) padlocks with 5/16" hasps in the OFF position
- Catalog numbers CFS361C5 & CFS361J5 can be DIN-rail mounted and can be either front or side operated with standard rotary handles..
- All CFS part numbers ending in N can be either front or side operated with standard rotary handles.
- Handles are available in Type 1, 3R, 4/4X & 12 ratings
- NFPA 79 field installed kits are available
- 30-400A, 200kA switches are provided with quick connect terminal provisions for voltage sensing or for 10A max. control circuits

**Switch**

**CFS363JN**
with (2) **CFSAUX1NO**

**Shaft**

**CFSS10200HN**

**Handle**

**CFSH10BL12N**

**Lugs/Accessories**

**CFSL200**

### Ordering information

1. Select the panel mounted switch required based on Ampere, HP and AIC requirements. Switches with a right hand mechanism are standard, 30-100A switches with a left hand mechanism are available.
2. Select handle based on environmental rating required.
3. Select operating shaft (200 or 400mm in length). For enclosure depths of 9.0" or less from panel mounting surface to inside of door use 200mm long shafts. For deeper enclosures use 400mm long shafts. 30A 100kA switches can be used in 10" deep enclosures (panel to inside of door) with 200mm shaft and CFSH5N handles.

Note: Be sure to check shaft and handle compatibility with the switch selected by using information provided in the selection tables.

4. Line & load lugs are provided as standard on 30-100A switches. Terminal kits are available for 200-800A switches if needed.
5. Auxiliary contact are available if needed as follows. 30A switch CFS361J5 will accept up to (2) aux contacts without an aux contact holder. If more than (2) aux contacts are required order aux contacts PLUS aux contact holder kit CFSAUXH1. All other switches will accept up to (4) aux contacts.
6. 30-100A switches are designed to prevent inadvertent contact with live parts and shields are not required. 200 & 400A switches are not supplied with terminal shields. They are available as field installed kits for both line and load terminals. 400-800A switches are supplied as standard with line shields and terminal shroud kits are available for the load side.

# Type CFS Compact Fusible Switches

## Shaft and Handle Selection

### Fusible switches, 3-pole 600V AC Max. 30-100A & 600-800A switches are also rated 250V DC Max when poles are field connected in series⑤

| Switch Ampere Rating | Catalog Number | Fuse Provisions Provided | Max Horsepower Ratings 240V 3Ø AC | 480V 3Ø AC | 600V 3Ø AC | 250V DC | AC Short Circuit Rating |

### Operating Shafts for 30-400A Switches⑤

| Catalog number | Shaft length in. (mm) | Switch & handle compatibility |
|---|---|---|
| **CFSS5200N** | 7.9 (200) | 5mm x 5mm for use with CFS361C5 & CFS361J5 switches & with "CFSH5" handles only |
| **CFSS5400N** | 15.7 (400) | |
| **CFSS5200HN** | 7.9 (200) | 5mm x 5mm for use with all "CFSH10" handles & with CFS361C5 & CFS361J5 switches only |
| **CFSS5400HN** | 15.7 (400) | |
| **CFSS10200HN** | 7.9 (200) | 10mm x 10mm for use with all "CFSH10" handles & with all 30-400A switches except CFS361C5 & CFS361J5 |
| **CFSS10400HN** | 15.7 (400) | |

### Compact rotary operating handles — door mounted (for use with CFS361C5 & CFS361J5 switches only)⑥

| Catalog number | Color | UL Type | Operating shaft compatibility |
|---|---|---|---|
| **CFSH5B12N** **CFSH5R12N** | Blue & Black Yellow & Red | 1, 3R & 12 | CFSS5200N or CFSS5400N |
| **CFSH5B4N** **CFSH5R4N** | Blue & Black Yellow & Red | 1, 3R, 12 & 4/4X | |

### Rotary Operating Handles - Door Mounted (for use with CFSS5200HN, CFSS5400HN, CFSS10200HN & CFSS10400HN)

| Catalog number | Color | Description |
|---|---|---|
| **Type 1, 3R & 12**⑦ | | |
| **CFSH10B12N** | Blue & Black | Heavy duty pistol grip (2.75" long for use with 30A switches & CFS362JN1) |
| **CFSH10R12N** | Yellow & Red | |
| **CFSH10BL12N** | Blue & Black | Heavy duty pistol grip (4.92" long for 30-400A switches) |
| **CFSH10RL12N** | Yellow & Red | |
| **Type 1, 3R, 4/4X & 12**⑦ | | |
| **CFSH10B4N** | Blue & Black | Heavy duty pistol grip (2.75" long for use with 30A switches & CFS362JN1) |
| **CFSH10R4N** | Yellow & Red | |
| **CFSH10BL4N** | Blue & Black | Heavy duty pistol grip (4.92" long for 30-400A switches) |
| **CFSH10RL4N** | Yellow & Red | |

**CFS361J5**

**CFSS5400N**

**CFSH5B12N**

① Line and load lugs included.
② Line and load lugs are not included. Order from table on next page if required.
③ DC HP rating shown requires (3) poles to be connected in series.
④ **CFS364JN** & **CFS365JN** can be rotated 180º for left hand operation as standard.
⑤ Catalog numbers **CFS361C5** & **CFS361J5** accept 5mm x 5mm operating shafts. All other 30-400A switches accept 10mm x 10mm operating shafts.
⑥ Compact pistol grip design (2.75" long) with defeatable cover interlock. Cover can be opened when handle is padlocked in the OFF position.
⑦ Defeatable cover interlock provided. Cover cannot be opened when handle is padlocked in the OFF position.
⑧ 4 pole 600 & 800A switches, **CFS466J** & **CFS467L** are also available.
⑨ **CFS366J** and **CFS367L** are rated 250 & 600V DC when (2) poles are connected in series.

### 600 & 800A Rotary Operating Handles - Door Mounted (8.27" long)⑦

| Catalog number | Color | UL Type |
|---|---|---|
| **CFSH12BL12** | Blue & Black | 1, 3R & 12 |
| **CFSH12RL12** | Yellow & Red | 1, 3R & 12 |
| **CFSH12BL4** | Blue & Black | 1, 3R, 12 & 4/4X |
| **CFSH12RL4** | Yellow & Red | 1, 3R, 12 & 4/4X |

### 600 & 800A Operating Shafts (Cross Section 12mm x 12mm)

| Catalog number | Shaft length in. (mm) | Enclosure depth (switch mounting surface to door OD) |
|---|---|---|
| **CFSS12200H** | 12.59 (320) | 10.43 – 16.68 in. |
| **CFSS12400H** | 15.75 (400) | 10.43 – 19.84 in. |

**CFSL200 & 400**

### Type CFS Fusible Switch Accessories

| Catalog number | Description |
|---|---|
| **Terminals**① | |
| **CFSL200** | 200A lug kit (6 lugs per kit) #6-3/0 |
| **CFSL400N** | 400A lug kit (6 lugs per kit) #2-600kcmil (for CFS365JN only) |
| **CNFSL400D** | 400A lug kit (6 lugs per kit, 2 wires per lug) #6-350kcmil |
| **CFSL400** | 600-800A lug kit (6 lugs per kit, 2 wires per lug) #2-600kcmil⑨ |
| **Shorting bars (no fuse kits)** | |
| **CFSSB60** | 60A shorting bar kit (3 links per kit) |
| **CFSSB100** | 100A shorting bar kit (3 links per kit) |
| **CFSSB200** | 200A shorting bar kit (3 links per kit) |
| **CFSSB400** | 400A shorting bar kit (3 links per kit) |
| **CFSSB680** | 600 & 800A shorting bar kit (1 link per kit) |
| **Auxiliary contacts (NEMA ratings AC A600 DC N600)** | |
| **CFSAUXH1**② | Aux contact holder (CFS361C5 & CFS361J5) |
| **CFSAUX1NO** | Aux contact 1 NO (30-800A Sws) |
| **CFSAUX1NC** | Aux contact 1 NC (30-800A Sws) |
| **CFS11AUX** | 1NO, 1NC aux contact kit (side mount for 200kA switches) |
| **CFS22AUX** | 2NO, 2NC aux contact kit (side mount for 200kA switches) |
| **Terminal shrouds (line or load)** | |
| **CFSTS200N**⑧ | 200A shroud kit (line or load 3-pole kit) |
| **CFSTS400N**⑧ | 400A shroud kit (line or load 3-pole kit for CFS365JN only) |
| **CFSTS680**⑥ | 600/800A 3-pole shroud kit |
| **CFSTS6804**⑥ | 600/800A 4-pole shroud kit |
| **30A compact switch kits** | |
| **CFSPLK** | Shaft padlocking kit for 30A compact switch when door is opend |
| **CFSH5CDM** | Direct mount handle kit for CFS361C5 |
| **CFSH5JDM** | Direct mount handle kit for CFS361J5 |

**CFSAUX1NC**

**CFSSB100 – CFSSB400**

### NFPA 79 kits (if auxiliary contacts are needed, see table above)

Kits provide an operating shaft suitable for use with all heavy duty handles (not for use with CFSH5 handles).
Kits also provide an internal operating handle and an internal OFF padlocking provision.

| | |
|---|---|
| **CFSNFPA1**④ | For use with CFS361C5 & CFS361J5 |
| **CFSNFPA2N**⑤ | For use with CFS361JN, CFS361CN, CFS362JN1, CFS362JN, CFS363JN & CFS364JN |
| **CFSNFPA3N**⑤ | For use with CFS365JN only |

① Supplied as standard on 30-100A switches
② **CFS361C5** will accept (4) aux contacts without an aux contact holder. **CFS361J5** will accept (2) aux contacts without an aux contact holder.
③ Supplied as standard on all but 30A, 100kA compact switches.
④ 12.6 in. (320 mm) long operating shaft included
⑤ 12.7 in. (323 mm) long operating shaft included
⑥ Line side terminal shrouds supplied with switch
⑦ Defeatable cover interlock included. Cover cannot be opened when the handle is padlocked in the OFF position.
⑧ Neither line or load terminal shrouds are supplied as standard with new style 200 & 400A switches.
⑨ 2 kits needed for 800A, total 12 lugs to cover line and load sides

## UL & CSA Technical Characteristics And Panel Space Requirements

| Catalog Number | Amps | Fuse Class | Ac Short Circuit Rating | Electrical Endurance | Mechanical Endurance | Panel Space Requirements - in. (mm) | | |
|---|---|---|---|---|---|---|---|---|

| **CFS365JN** | **CFSNFPA3N** | (2) Total, CFSAUX1NO or CFSAUX1NC② |

① Minimum dimensions from mounting surface to inside of cover. Dimensions shown can be decreased if aux contacts are not required.

② For additional auxiliary contacts use side mounted **CFS11AUX** or **CFS22AUX**.

# Type CNFS Compact Non-Fusible Switches

## Description

Siemens Type CNFS compact non-fusible switches meet UL 98 requirements and can be used in either service entrance or branch circuit applications. They are available in 30-800A, 3-pole switches and are all rated 600VAC maximum.

All are open style, designed to be panel mounted and are UL listed under file number #E121152 or #E68312 and CSA certified under file number #222227. A variety of door mounted rotary operators are available with Type 1, 3R, 12 or 4/4X ratings.

These non-fusible switches are UL listed under file #E201138 and CSA certified under file #112964. They also conform to IEC standard 60947-3.

## Catalog Numbering System

**CNFS Switches**
*Compact Non-Fusible Switch*

| CNFS | 3 | 6 | 1 | N |
|---|---|---|---|---|

- Number of poles 3 = 3
- Max. Voltage Rating 6 = 600V
- Ampere rating
  - 1 = 30A
  - 2 = 60A
  - 3 = 100A
  - 4 = 200A
  - 5 = 400A
  - 6 = 600A
  - 7 = 800A
- Design type
  - N = Compact design

# Type CNFS Compact Non-Fusible Switches

## Features

- 30 - 800A ratings
- UL Listed under file #E201138 & CSA Certified under file #112964 or #703166
- Options to have door mounted pistol handles with defeatable cover interlock or direct mounted handles.
- Meets UL 98 requirements
- Compact size
- All short circuit protection ratings require the use of Class J fuses in the circuit.
- Load break and horsepower rated
- Quick make and break operation
- All external handles and direct handles for 600-800A switches are padlockable with up to (3) padlocks with 5/16" hasps in the OFF postition. Direct handles for 30-100A switches are padlockable with (1) padlock with 3/16" hasps in the OFF position.
- All switches are able to be panel mounted. Catalog numbers CNFS361N, CNFS362N, & CNFS363N can also be DIN-rail mounted and can either be front or side operated with standard pistol handles.
- Handles are available in Type 1, 3R, 4/4X & 12 ratings

### Shaft

**CFSS10200HN**

### Handle

**CFSH10BL12N**

### Lugs/Accessories

**CFSL200**

## Ordering information

1. Select the panel mounted switch required based on Ampere, HP and AIC requirements. Switches with a right hand mechanism are standard.
2. Select handle based on environmental rating required.
3. For door mounted handles, select operating shaft based on enclosure depth. For enclosure depths of 9.00" or less from panel mounting surface to inside of door use up to 200 mm long shafts. From 9.00" to 13.00" use up to 320 mm long shafts. For deeper enclosures use up to 400 mm long shafts. For direct mount handles, no shaft is needed.

Note: Be sure to check shaft and handle compatibility with the switch selected by using information provided in the selection tables.

4. Line & load lugs are provided as standard on 30-100A switches. Terminal kits are available for 200-800A switches if needed.
5. Auxiliary contacts are available if needed. Each switch will accept up to (2) aux contact modules, containing (2) contacts in each.
6. 30-100A Series N switches are designed to prevent inadvertent contact with live parts and shields are not required but are offered as terminal shrouds. 100-400A switches are not supplied with terminal shields. They are available as separate field installed kits for both line and load terminals by amperage rating. Line side terminal screens are provided for 600-800A switches.

### Type CNFS compact non-fusible switches

| Switch Ampere Rating | Catalog Number | Max Horsepower Ratings | | | Short Circuit Rating | |
|---|---|---|---|---|---|---|

| **CFSH10BL4N** | Black | NEMA 4/4X | | |
| **CFSH10RL4N** | Red/Yellow | NEMA 4/4X | | |
| **CFSH12BL12** | Black | NEMA 1, 3R, 12 | CNFSS152003, CNFSS153203, CNFSS154003 | CNFS366N, CNFS367N |
| **CFSH12RL12** | Red/Yellow | NEMA 1, 3R, 12 | | |
| **CFSH12BL4** | Black | NEMA 4/4X | | |
| **CFSH12RL4** | Red/Yellow | NEMA 4/4X | | |

**CFSH12RL12**

① Line and load lugs are included.
② Line and load lugs are not included. Order from table on following pages if needed.
③ All switches can be rotated 180° for left hand operation as standard.
④ Flange mounting is not available for non-fusible switches.

### Auxiliary contacts for use with non-fusible switches

| Catalog Number | Number of Contacts | Use with Non-fusible Contact Switches |
|---|---|---|
| **CNFS1AUX1** | 1 Normally Open + 1 Normally Closed | CNFS361N, CNFS362N, CNFS363N |
| **CNFS2AUX1** | 2 Normally Closed | |
| **CNFS1AUX2** | 1st Auxiliary Contact: 1 Normally Open + 1 Normally Closed | CNFS364N, CNFS365N, CNFS366N, CNFS367N |
| **CNFS2AUX2** | 2nd Auxiliary Contact: 1 Normally Open + 1 Normally Closed | |

**CNFS1AUX1**

### Terminal shrouds for use with non-fusible switches

| Catalog Number | Shroud Location | Use with Non-fusible Contact Switches |
|---|---|---|
| **CNFSTS100** | Top and Bottom | CNFS361N, CNFS362N, CNFS363N |
| **CNFSTSC200T** | Top | CNFS364N |
| **CNFSTSC200B** | Bottom | |
| **CNFSTSC400T** | Top | CNFS365N |
| **CNFSTSC400B** | Bottom | |
| **CNFSTSC600B** | Bottom | CNFS366N |
| **CNFSTSC800B** | Bottom | CNFS367N |

**CNFSTSC400T**

### Terminal lug kits for use with non-fusible switches

| Catalog Number | Wire Sizes | Use with Non-fusible Contact Switches |
|---|---|---|
| Included | #10-2/0 | CNFS361N, CNFS362N, CNFS363N |
| **CFSL200** | #6-300MCM | CNFS364N |
| **CFSL400N** | #2-600MCM | CNFS365N |
| **CNFSL400D** | #6-350MCM, 2 wires per lug | CNFS356N |
| **CFSL400** | #6-350MCM, 2 wires per lug | CNFS366N, CNFS367N① |

**CFSL200 & 400**

① 2 kits needed for 800A, total 12 lugs to cover line and load sides.

# General Information

## NEMA enclosure descriptions

**NEMA Standard Publications**

**No. 250-1979**

**Type 1**

Type 1 enclosures are intended for indoor use primarily to provide a degree of protection against contact with the enclosed equipment in locations where unusual service conditions do not exist. The enclosures shall meet the rod entry and rust resistance design tests.

**Type 3**

Type 3 enclosures are intended for outdoor use, primarily to provide a degree of protection against windblown dust, rain and sleet, and to be undamaged by the formation of ice on the enclosure. They shall meet rain, external icing, dust, and rust resistance design tests. They are not intended to provide protection against conditions such as internal condensation or internal icing.

**Type 3R**

Type 3R enclosures are intended for outdoor use, primarily to provide a degree of protection against falling rain, and to be undamaged by the formation of ice on the enclosure. They shall meet rod entry, rain, external icing, and rust resistance design tests. They are not intended to provide protection against conditions such as dust, internal condensation, or internal icing.

**Type 4**

Type 4 enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against windblown dust and rain, splashing water, and hose directed water, and to be undamaged by the formation of ice on the enclosure. They shall meet hosedown, external icing, and rust resistance design tests. They are not intended to provide protection against conditions such as internal condensation or internal icing.

**Type 4X**

Type 4X enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water, and to be undamaged by the formation of ice on the enclosure. They shall meet hose-down, external icing, and corrosion resistance design tests. They are not intended to provide protection against conditions such as internal condensation or internal icing.

Shall be manufactured of American Iron and Steel Institute Type 304 Stainless steel, polymerics, or materials with equivalent corrosion resistance to provide a degree of protection against specific corrosive agents.

**Type 6**

Type 6 enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against the entry of water during occasional temporary submersion at a limited depth.

Type 6P enclosures are intended for indoor or outdoor use primarily to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.

**Type 7**

Type 7 enclosures are for indoor use in locations classified as Class I, Groups C or D, as defined in the National Electrical Code.

Type 7 enclosures shall be capable of withstanding the pressures resulting from an internal explosion of specified gases and contain such an explosion sufficiently that an explosive gas-air mixture existing in the atmosphere surrounding the enclosure will not be ignited. Enclosed heat generating devices shall not cause external surfaces to reach temperatures capable of igniting explosive gas-air mixtures in the surrounding atmosphere. Enclosures shall meet explosion, hydrostatic, and temperature design tests.

**Type 9**

Type 9 enclosures are intended for indoor use in locations classified as Class II Groups E, F or G, as defined in the National Electrical Code.

Type 9 enclosures shall be capable of preventing the entrance of dust. Enclosed heat generating devices shall not cause external surfaces to reach temperatures capable of igniting or discoloring dust on the enclosure or igniting dust-air mixtures in the surrounding atmosphere. Enclosures shall meet dust penetration and temperature design tests, and aging of gaskets (if used).

**Class I**—Flammable gases or vapors.

**Class II**—Combustible dust.

**Class III**—Ignitable fibers or flyings.

**Division I**—Normal situation; the hazard would be expected to be present in everyday repair and maintenance.

**Division II**—Abnormal situation; the material is expected to be confined within closed containers or closed systems and will be present only during accidental rupture, breakage or unusual faulty operation.

**Groups**

**Class I**—Gases and vapors are designed for use in groups C and D, depending on the ignition temperature of the substance, its explosion pressure and other flammable characteristics.

**Class II**—Dust locations are designed for use in groups E, F, and G, according to the ignition temperature and conductivity of the hazardous substance.

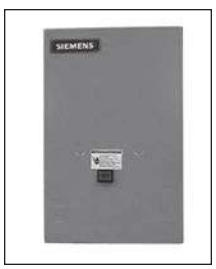
**Type 12**

Type 12 enclosures are intended for indoor use primarily to provide a degree of protection against dust, falling dirt, and dripping non-corrosive liquids. They shall meet drip, dust, and rust resistance design tests. They are not intended to provide protection against conditions such as internal condensation.

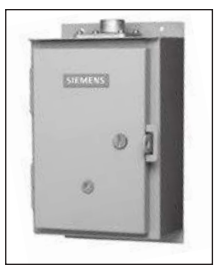
Siemens NEMA 12 may be field modified for outdoor use. NEMA 3 requires the use of watertight conduit hubs. NEMA 3R requires the use of watertight conduit hubs at a level above the lowest live part and drain holes of 1⁄8" diameter shall be added at the bottom of the enclosure.

**Type 13**

Type 13 enclosures are intended for indoor use primarily to provide a degree of protection against dust, spraying of water, oil and non-corrosive coolant. They shall meet oil explosion and rust resistance design tests. They are not intended to provide protection against conditions such as internal condensation.



Type 1



Type 3/3R

Type 4/4X

Type 4X

Type 3, 4, 7 & 9

Type 12 & 13

# General Information

## IEC enclosure descriptions

### Comparison of NEMA Enclosures

This table summarizes the information provided on the previous page.

| Provides a Degree of Protection Against the Following Environmental Conditions | 1 | 3R | 4 | 4X | 12 | 13 |
|---|---|---|---|---|---|---|
| Incidental contact with the enclosed equipment | × | × | × | × | × | × |
| Rain, snow, and sleet | — | × | × | × | — | — |
| Windblown dust | — | — | × | × | — | — |
| Falling dirt | × | — | × | × | × | × |
| Falling liquids and light splashing | — | — | × | × | × | × |
| Circulating dust, lint, fibers, and flyings | — | — | × | × | × | × |
| Settling airborne dust, lint, fibers, and flyings | — | — | × | × | × | × |
| Hosedown and splashing water | — | — | × | × | — | — |
| Oil and coolant seepage | — | — | — | — | × | × |
| Oil or coolant spraying and splashing | — | — | — | — | — | × |
| Corrosive agents | — | — | — | × | — | — |

### IEC Environmental Enclosure Ratings for Global Applications

IEC enclosures use a two digit numbering system to define the degree of protection they provide. The first digit specifies the degree of protection against incidental contact and penetration of solid objects. The second digit specifies the level of protection against the ingress of water.

**Example:** An IP65 enclosure is dust tight and protected against water jets. An IP66 enclosure is dust tight and protected against powerful water jets.

| First Numeral | | Second Numeral | |
|---|---|---|---|
| **Protection of persons against access to hazardous parts and protection against penetration of solid foreign objects.** | | **Protection against ingress of water under test conditions specified in IEC 529.** | |
| 0 | Non-protected | 0 | Non-protected |
| 1 | Back of hand; objects greater than 50 mm in diameter | 1 | Vertically falling drops of water |
| 2 | Finger; objects greater than 12.5 mm in diameter | 2 | Vertically falling drops of water with enclosure tilted 15 degrees |
| 3 | Tools or objects greater than 2.5 mm in diameter | 3 | Spraying water |
| 4 | Tools or objects greater than 1 mm in diameter | 4 | Splashing water |
| 5 | Dust-protected (Dust may enter but must not interfere with operation of the equipment or impair safety) | 5 | Water jets |
| 6 | Dust tight (No dust observable inside enclosure at end of test) | 6 | Powerful water jets |
| | | 7 | Temporary submersion |
| | | 8 | Continuous submersion |

### Comparison of NEMA Type Numbers to IEC Classification Designations

This table shows the IP classification designation to which NEMA enclosures may be applied. The table cannot be used to convert IEC designations to NEMA type numbers.

| NEMA Enclosure Type Number | IEC Enclosure Classification Designation |
|---|---|
| 1 | IP10 |
| 3 | IP54 |
| 3R | IP54 |
| 4 and 4X | IP56 |
| 6 and 6P | IP67 |
| 12 | IP52 |
| 13 | IP54 |

# General Information

## IEC contactor utilization catagories

Contactors designed for international applications are tested and rated per IEC 947-4. The IEC rating system is broken down into different utilization categories that define the value of the current that the contactor must make, maintain, and break. The following category definitions are the most commonly used for IEC Contactors.

Ratings for Siemens contactors per these categories can be found in Section 3.

### AC Categories

#### *AC-1*

This applies to all AC loads where the power factor is at least 0.95. These are primarily non-inductive or slightly inductive loads. Breaking remains easy.

#### *AC-3*

This category applies to squirrel cage motors where the breaking of the power contacts would occur while the motor is running. On closing, the contactor experiences an inrush which is 5 to 8 times the nominal motor current, and at this instant, the voltage at the terminals is approximately 20% of the line voltage. Breaking remains easy.

#### *AC-4*

This applies to the starting and breaking of a squirrel cage motor during an inch or plug reverse. On energization, the contactor closes on an inrush current approximately 5 to 8 times the nominal current. On de-energization, the contactor breaks the same magnitude of nominal current at a voltage that can be equal to the supply voltage. Breaking is severe.

### DC Categories

#### *DC-1*

This applies to all DC loads where the time constant (L/R) is less than or equal to one msec. These are primarily noninductive or slightly inductive loads.

#### *DC-2*

This applies to the breaking of shunt motors while they are running. On closing, the contactor makes the inrush current around 2.5 times the nominal rated current. Breaking is easy.

#### *DC-3*

This applies to the starting and breaking of a shunt motor during inching or plugging. The time constant shall be less than or equal to 2 msec. On energization, the contactor sees current similar to that in Category DC-2. On de-energization, the contactor will break around 2.5 times the starting current at a voltage that may be higher than the line voltage. This would occur when the speed of the motor is low because the back e.m.f. is low. Breaking is severe.

#### *DC-5*

This applies to the starting and breaking of a series motor during inching or plugging. The time constant being less than or equal to 7.5 msec. On energization, the contactor sees about 2.5 times the nominal full load current. On de-energization, the contactor breaks the same amount of current at a voltage which can be equal to the line voltage. Breaking is severe.

### Special Contactor Utilization Categories

Some contactors also have ratings for the following specialty utilization categories.

For specific applications, please contact your local Siemens sales office.

| Kind of Current | Utilization Categories | Typical Applications |
|---|---|---|
| AC | AC-2 | Slip-ring motors: starting, switching off |
| | AC-5a | Switching of electric discharge lamp controls |
| | AC-5b | Switching of incandescent lamps |
| | AC-6a | Switching of transformers, welders |
| | AC-6b | Switching of capacitor banks |
| | AC-7a | Slightly inductive loads in household appliances and similar applications |
| | AC-7b | Motor-loads for household applications |
| | AC-8a | Hermetic refrigerant compressor motor[1]) control with manual resetting of overload releases |
| | AC-8b | Hermetic refrigerant compressor motor[1]) control with automatic resetting of overload releases |
| DC | DC-6 | Switching of incandescent lamps |

### Electrical Quantities Symbols According to DIN, VDE and IEC

| Symbol | Characteristic Electrical Quantity |
|---|---|
| $U_i$ | Rated insulation voltage to DIN VDE 0110/DIN VDE 0660 |
| $U_e$ | Rated operational voltage |
| $U_c$ | Rated control voltage (IEC 947-1) at which an operating mechanism or release is rated, e.g. coil voltage to DIN VDE 0660 Part 102 |
| $U_s$ | Rated control supply voltage (Control voltage) to DIN VDE 0660 Part 102, IEC 947-1 |
| $U$ | No-load voltage to IEC 947-2, -3, -5 |
| $U_r$ | Power-frequency recovery voltage (IEC 947-.) |
| $U_o$ | Transformer no-load voltage to DIN VDE 0532 |
| $U_k$ | Short-circuit impedance voltage to DIN VDE 0532 |
| $U_{kr}$ | Rated value of the impedance voltage in % to DIN VDE 0102, 01.90 |
| $I_n$ | Rated current to IEC 947-. |
| $I_{th}$ | Eight-hour-current to DIN VDE 0660, conventional free-air thermal current to IEC 947- (defined as eight-hour-current) thermally equivalent short-time current (r.m.s. value) to DIN VDE 0103 |
| $I_{the}$ | Conventional enclosed thermal current |
| $I_u$ | Rated uninterrupted current to IEC 947-1 |
| $I_e$ | Rated operational current |
| $I_s$ | Selectivity (discrimination) limit current (DIN VDE 0660, IEC 947-1) |
| $I_{cm}$ | Rated short-circuit making capacity to IEC 947-1 |
| $I_{cn}$ | Rated short-circuit breaking capacity to IEC 947-1 |
| $I_{cm}$ | Rated ultimate short-circuit breaking capacity to IEC 947-1 |

| Symbol | Characteristic Electrical Quantity |
|---|---|
| $I_{cw}$ | Rated short-time current withstand capacity to IEC 947-1 |
| $I_p$ | Test current (general) to DIN VDE 0660, prospective current to DIN VDE 0636 |
| $I_n$ | Breaking current (r.m.s. value) to DIN VDE 0102 |
| $i_p$ | Peak short-circuit current (maximum instantaneous value) to DIN VDE 0102 |
| $I_k$ | Sustained (symmetrical) short-circuit current (r.m.s. value), DIN VDE 0102. Rated short-time withstand current to DIN VDE 0660 |
| $i_p$ | Let-through current of fuses and rapidly operating switching devices (maximum instantaneous value during the break time) to DIN VDE 0102 |
| $I_o$ | No-load current at the input side of a transformer (unloaded output side) to DIN VDE 0532 |
| $I_x$ | Current carrying capacity (ampacity) |
| $I_{sr}$ | Rated rotor operational current (DIN VDE 0660, IEC 947-1) |
| $I_r$ | Setting current ("current setting") to DIN VDE 0660 |
| $I_R$ | Take-over current |
| R | Ohmic resistance |
| $S''_k$ | Initial symmetrical AC short-circuit power (simplified: apparent short-circuit power) |
| X | Reactance, reactive impedance |
| Z | Impedance (apparent resistance) |
| x | Factor to determine the peak short-circuit current ip |

1)Hermetic refrigerant compressor motor is a combination consisting of a compressor and a motor, both of which are enclosed in the same housing, with no external shaft or shaft seals, the motor operating in the refrigerant.

# General Information

## NEMA and IEC control circuit classifications

### AC-Control Circuit Classifications—NEMA

NEMA designates Control Circuit Rating with a code letter (for current) and a voltage code.

**Ratings & Test Values for AC Control Circuit Contacts at 50 or 60Hz**

| Contact Rating Designation | Thermal Continuous Test Current, Amperes | Maximum Current, Amperes | | | | | | | | Voltamperes | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | 120 Volts | | 240 Volts | | 480 Volts | | 600 Volts | | | |
| | | Make | Break | Make | Break | Make | Break | Make | Break | Make | Break |
| A150 | 10 | 60 | 6 | — | — | — | — | — | — | 7200 | 720 |
| A300 | 10 | 60 | 6 | 30 | 3 | — | — | — | — | 7200 | 720 |
| A600 | 10 | 60 | 6 | 30 | 3 | 15 | 1.5 | 12 | 1.2 | 7200 | 720 |
| B150 | 5 | 30 | 3 | — | — | — | — | — | — | 3600 | 360 |
| B300 | 5 | 30 | 3 | 15 | 1.5 | — | — | — | — | 3600 | 360 |
| B600 | 5 | 30 | 3 | 15 | 1.5 | 7.5 | 0.75 | 6 | 0.6 | 3600 | 360 |
| C150 | 2.5 | 15 | 1.5 | — | — | — | — | — | — | 1800 | 180 |
| C300 | 2.5 | 15 | 1.5 | 7.5 | 0.75 | — | — | — | — | 1800 | 180 |
| C600 | 2.5 | 15 | 1.5 | 7.5 | 0.75 | 3.75 | 0.375 | 3 | 0.3 | 1800 | 180 |
| D150 | 1 | 3.6 | 0.6 | — | — | — | — | — | — | 432 | 72 |
| D300 | 1 | 3.6 | 0.6 | 1.8 | 0.3 | — | — | — | — | 432 | 72 |
| E150 | 0.5 | 1.8 | 0.3 | — | — | — | — | — | — | 216 | 36 |

### DC-Control Circuit Classifications—NEMA

**Rating codes for DC Control Circuit Contacts**

| Contact Rating Designation[1]) | Thermal Continuous Test Current, Amperes | Maximum Make or Break[2]) Current, Amperes | | | Maximum Make or Break Voltamperes at 300 Volts or Less |
|---|---|---|---|---|---|
| | | 125 Volt | 250 Volt | 301 to 600 Volt | |
| N150 | 10 | 2.2 | — | — | 275 |
| N300 | 10 | 2.2 | 1.1 | — | 275 |
| N600 | 10 | 2.2 | 1.1 | 0.4 | 275 |
| P150 | 5 | 1.1 | — | — | 138 |
| P300 | 5 | 1.1 | 0.55 | — | 138 |
| P600 | 5 | 1.1 | 0.55 | 0.2 | 138 |
| Q150 | 2.5 | 0.55 | — | — | 69 |
| Q300 | 2.5 | 0.55 | 0.27 | — | 69 |
| Q600 | 2.5 | 0.55 | 0.27 | 0.1 | 69 |
| R150 | 1 | 0.22 | — | — | 28 |
| R300 | 1 | 0.22 | 0.11 | — | 28 |

### Control Circuit Classifications—IEC[3])

IEC 947-5-1 Uses Utilization Categories AC-15 to Specify Control Circuit Ranges.

Current at each voltage is specified by the manufacturer, not by the standard.

| AC Control Circuit Utilization Categories per IEC 947-5-1 | Make | | Break | |
|---|---|---|---|---|
| | $I/I_e$ | $U/U_e$ | $I/I_e$ | $U/U_e$ |
| AC-12 | 1 | 1 | 1 | 1 |
| AC-13 | 2 | 1 | 1 | 1 |
| AC-14 | 6 | 1 | 1 | 1 |
| AC-15 | 10 | 1 | 1 | 1 |

| DC Control Circuit Utilization Categories per IEC 947-5-1 | Make | | Break | |
|---|---|---|---|---|
| | $I/I_e$ | $U/U_e$ | $I/I_e$ | $U/U_e$ |
| DC-12 | 1 | 1 | 1 | 1 |
| DC-13 | 1 | 1 | 1 | 1 |
| DC-14 | 10 | 1 | 1 | 1 |

### Example of a Typical IEC Control Circuit Ratings Table[4])

**AC**

| $I_e$/AC-12 (Continuous Amps) | $U_e$ AC Voltage | $I_e$/AC-15 Amps |
|---|---|---|
| 10 | 24V | 6A |
| | 110V | 6A |
| | 220/230V | 6A |
| | 380/440V | 4A |

**DC**

| Voltage | $I_e$/DC-12 | $I_e$/DC-13 |
|---|---|---|
| 24 | 6A | 3A |
| 60 | 5A | 1.5A |
| 110 | 2.5A | 0.7A |
| 230 | 1A | 0.3A |

1)The numerical suffix designates the maximum voltage design values, which are to be 600, 300, and 150 volts for suffixes 600, 300, and 150 respectively. Test voltage shall be 600, 250, or 125 volts. MLLDLL.

2)For maximum ratings at 300 volts or less, the maximum make and break ratings are to be obtained by dividing the volt-ampere rating by the application voltage, but the current value is not to exceed the thermal continuous test current.

3) $I_e$ Rated operational current
$U_e$ Rated operational voltage
I Current to be made or broken
U Voltage before make

4)Example: A control circuit contact having an AC-15 rating of 6 amps at 230 volts is capable of making 60 amps and breaking 6 amps at 230 volts. KRE.

| 400 | 1800 | — | 896 | 448 | 358 |

Full load ampere ratings of motors vary depending upon a number of factors. The full load currents listed above are “average values” for horsepower rated motors of several manufacturers at the most commonly rated voltages and speeds. These “average values” along with the similar values listed in the N.E.C. should be used as a guide only for selecting suitable components for the motor branch circuit. The rated full load current shown on the motor nameplate may vary considerably from the listed value, depending on the specified motor design.

**Note: RPM shown for 60Hz motors. For 50Hz motors, multiply the 60HZ FLA value by 1.2.**

**Overload Relay Selection Multi-Speed/Part-Winding/Wye-Delta**

Special attention should be given to the selection of the overload relay adjustment range for multi-speed, part-winding and wye-delta controllers, as follows:

**Multi-Speed Controllers:** Each speed requires a separate set of overloads. The adjustment range must be selected on the basis of the full-load current for each particular speed.

**Part-Winding Controllers:** Each winding of the motor must have its own set of overloads. The adjustment range should be selected on the basis of one-half the motor full-load current; that is, the full load current of each winding current.

**Wye-Delta Controllers:** Only one set of overloads is required. Since the overload relay is located electrically “inside the delta connection,” the adjustment range must be selected on the basis of the full-load motor current (delta connection) divided by 1.73.

**Single Phase:** See page 9/120 for ampere ratings of single phase AC induction motors.

# General Information

## Electrical formulas and grounding requirements

### Electrical Formulas for Finding Amperes, Horsepower, Kilowatts and kVA

| To Find | Single-Phase | Alternating Current Two-Phase[1]), Four-Wire | Three-Phase | Direct Current |
|---|---|---|---|---|
| Kilowatts | $\frac{I \times E \times pf}{1000}$ | $\frac{I \times E \times 2 \times pf}{1000}$ | $\frac{I \times E \times 1.73 \times pf}{1000}$ | $\frac{I \times E}{1000}$ |
| kVA | $\frac{I \times E}{1000}$ | $\frac{I \times E \times 2}{1000}$ | $\frac{I \times E \times 1.73}{1000}$ | — |
| Horsepower (Output) | $\frac{I \times E \times \% EFF \times pf}{746}$ | $\frac{I \times E \times 2 \times \% EFF \times pf}{746}$ | $\frac{I \times E \times 1.73 \times \% EFF \times pf}{746}$ | $\frac{I \times E \times \% EFF}{746}$ |
| Amperes when Horsepower is Known | $\frac{HP \times 746}{E \times \% EFF \times pf}$ | $\frac{HP \times 746}{2 \times E \times \% EFF \times pf}$ | $\frac{HP \times 746}{1.73 \times E \times \% EFF \times pf}$ | $\frac{HP \times 746}{E \times \% EFF}$ |
| Amperes when Kilowatts is Known | $\frac{KW \times 1000}{E \times pf}$ | $\frac{KW \times 1000}{2 \times E \times pf}$ | $\frac{KW \times 1000}{1.73 \times E \times pf}$ | $\frac{KW \times 1000}{E}$ |
| Amperes when kVA is Known | $\frac{kVA \times 1000}{E}$ | $\frac{kVA \times 1000}{2 \times E}$ | $\frac{kVA \times 1000}{1.73 \times E}$ | — |

### Average Efficiency and Power Factor Values of Motors

When the actual efficiencies and power factors of the motors to be controlled are not known, the following approximations may be used.

**Efficiencies[3])**

| Type | Power Factor |
|---|---|
| DC motors, 35 horsepower and less | 80% to 85% |
| DC motors, above 35 horsepower | 85% to 90% |
| Synchronous motors (at 100% power factor) | 92% to 95% |
| "Apparent" Efficiencies (= Efficiency × Power Factor); Three-phase induction motors, 25 horsepower and less | 70% |
| Three-phase induction motors above 25 horsepower | 80% |

### Fault-Current Calculation on Low-Voltage AC Systems

In order to determine the maximum interrupting rate of the circuit breakers in a distribution system, it is necessary to calculate the current which could flow under a three-phase bolted short circuit condition. For a three-phase system the maximum available fault current at the secondary side of the transformer can be obtained by use of the formula:

$$I_{SC} = \frac{kVA \times 100}{KV \times \sqrt{3} \times \% Z}$$

where:

$I_{SC}$ = Symmetrical RMS amperes of fault current.

kVA = Kilovolt-ampere rating of transformers.

KV = Secondary voltage in kilovolts.

% Z = Percent impedance of primary line and transformer.

### Minimum Size Grounding Conductors for Grounding Raceways and Equipment (From NEC Table 250–95)[2])

| Rating or Setting of Automatic Overcurrent Device in Circuit Ahead of Equipment, Conduit etc., Not Exceeding (Amperes) | Size | |
|---|---|---|
| | Copper Wire Number | Aluminum or Copper Clad Aluminum Wire Number |
| 15 | 14 | 12 |
| 20 | 12 | 10 |
| 30 | 10 | 8 |
| 40 | 10 | 8 |
| 60 | 10 | 8 |
| 100 | 8 | 6 |
| 200 | 6 | 4 |
| 300 | 4 | 2 |
| 400 | 3 | 1 |
| 500 | 2 | 1/0 |
| 600 | 1 | 2/0 |
| 800 | 1/0 | 3/0 |
| 1000 | 2/0 | 4/0 |
| 1200 | 3/0 | 250 kcmil |
| 1600 | 4/0 | 350 kcmil |
| 2000 | 250 kcmil | 400 kcmil |
| 2500 | 350 kcmil | 600 kcmil |
| 3000 | 400 kcmil | 600 kcmil |
| 4000 | 500 kcmil | 800 kcmil |
| 5000 | 700 kcmil | 1200 kcmil |
| 6000 | 800 kcmil | 1200 kcmil |

### Grounding Electrode Conductor for AC Systems (From NEC Table 250–94)[2])

| Size of Largest Service Entrance Conductor or Equivalent Area for Parallel Conductors | | Size of Grounding Electrode Conductor | |
|---|---|---|---|
| Copper | Aluminum or Copper Clad Aluminum | Copper | Aluminum or Copper Clad Aluminum |
| 2 or smaller | 1/0 or smaller | 8 | 6 |
| 1 or 1/0 | 2/0 or 3/0 | 6 | 4 |
| 2/0 or 3/0 | 4/0 or 250 kcmil | 4 | 2 |
| Over 3/0 to 350 kcmil | Over 250 kcmil to 500 kcmil | 2 | 1/0 |
| Over 350 kcmil to 600 kcmil | Over 500 kcmil to 900 kcmil | 1/0 | 3/0 |
| Over 600 kcmil to 1100 kcmil | Over 900 kcmil to 1750 kcmil | 2/0 | 4/0 |
| Over 1100 kcmil | Over 1750 kcmil | 3/0 | 250 kcmil |

1)In three-wire, two-phase circuits the current in the common conductor is 1.41 times that in either other conductor.
E = Volts I = Amperes
% EFF = Percent Efficiency pf = Power Factor

2)Additional information and exceptions are stated in Article 250—Grounding, National Electric Code.

3)These figures may be decreased slightly for single-phase and two-phase induction motors.

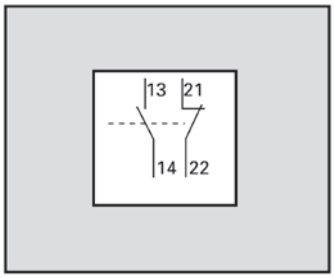
## Symbols and Terminal Markings—IEC

Per DIN standards, the terminals of auxiliary contacts on contactors and control devices are marked with a two digit number. Terminals that belong together are marked with the same location digit (first digit).

The second digits (called the function digits) identify the function of each contact per the following designation.

| Type of Contact | Function Digits |
|---|---|
| Normally Open | 3 and 4 |
| Normally Closed | 1 and 2 |
| Normally Open (Special Function) | 5 and 6 i.e. Time-Delay or Overload |
| Normally Closed (Special Function) | 7 and 8 Contacts |

**Example:**



**1.** The numbers 13 and 14 represent an auxiliary contact

**2.** The number 1 identifies that this is the first contact in the sequence

**3.** The numbers 3 and 4 identify this as a normally open contact

**4.** The numbers 21 and 22 represent another auxiliary contact

**5.** The number 2 identifies that this is the second contact in the sequence

**6.** The numbers 1 and 2 identify this as a normally closed contact

### Symbols and Terminal Markings

| Control Circuits | NEMA | IEC |
|---|---|---|
| Normally Open (NO) | | |
| Normally Closed (NC) | | |
| Time Delay Circuits | | |
| On Delay Normally Open (Timed Closed) | | |
| Normally Closed (Timed Open) | | |
| Off Delay Normally Open (Timed Open) | | |
| Normally Closed (Timed Closed) | | |

### NEMA and IEC Comparisons Contactor/Starter Markings

| | NEMA | IEC |
|---|---|---|
| Coils |   | M — Defined by type of coil. No Standard terminal designation.   |
| Power Contacts 3-Pole Device |   | Line Side Connections / Load Side Connections   |
| Overload Relay |   | Line Side Connections / Load Side Connections   |

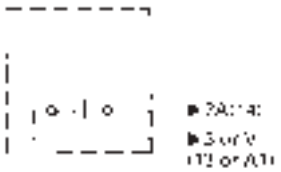
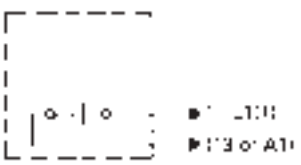
Selector Switch for Two Wire Maintained Control

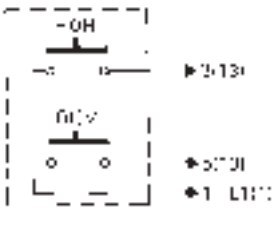


Remote Automatic Switch or Pilot Device for Use with Selector Switch

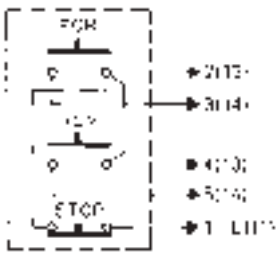


Maintained Contact Pilot Device for Two Wire Control

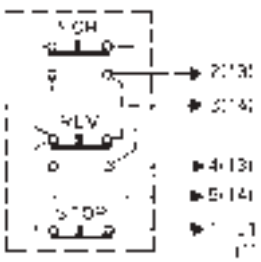
**Reversing Pilot Control** For Separate control voltage source remove Jumper A shown in individual wiring diagrams. Connect separate voltage source to terminal 1 on the pilot device as shown and to the terminal **X2** on the overload relay, or **W(A2)** on the coil if there is no overload.



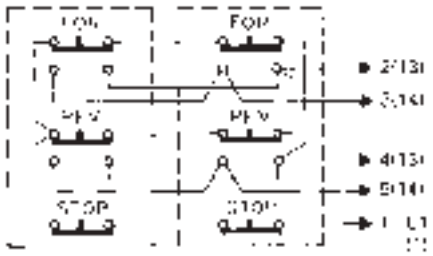
Momentary Contact



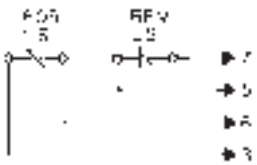
Connections for Single Push Button Stations, Reversing After Stop



Connections for Single Push Button Stations, Instant Reversing



Connections for Multiple Push Button Stations



Connections for Limit Switch
Remove Jumpers between
3 & 6 and 5 & 7 on Starter

# International Control Equipment (ICE)

## Quick reference list

Siemens is a manufacturer of equipment for the global market and manufactures products for global applications. The products listed in Sections 1 through 18 of this catalog are the products best suited for application in the U.S., Canada and Mexico.

There are a host of other Industrial Control products that can be made available for export applications or for replacement in OEM equipment imported in to the U.S. The most common Siemens components are listed in the table below. We refer to these as Industrial Control Equipment components or ICE products.

If you are trying to identify a Siemens ID that is not listed in the Catalog Number Index on pages 0/12 to 0/15 of this catalog or in the table below, please contact our Call Center at 800-241-4453 or 423-262-5700. The Siemens Call Center maintains an extensive data base on all Siemens Operating Companies, and they can direct you for the appropriate support.

| Catalog Number Prefix | Description |
|---|---|
| **2CC** | Low-Pressure Axial Ventilator Fan |
| **2CF7** | Medium-Pressure Radial-flow Fan |
| **2CQ** | Medium-Pressure Axial Ventilator Fan |
| **2CT** | Low-Pressure Axial Ventilator Fan |
| **3KA** | Disconnect Switch |
| **3KE** | Disconnect Switch |
| **3KL** | Load Disconnect Switch w/Fuses |
| **3KM** | Load Disconnect Switch w/Fuses |
| **3KX** | 3KE4 Accessories |
| **3KY** | 3KL Accessories |
| **3NA** | LV HRC Fuses |
| **3NC** | SITOR Semiconductor fuse-links to 1000 V [1] |
| **3ND1** | LV HRC Fuses |
| **3ND2** | LV HRC Fuses |
| **3NE** | SITOR Semiconductor fuse-links to 2500 V [1] |
| **3NG1** | LV HRC Fuses |
| **3NH** | Fuse Bases |
| **3NJ** | Fused Disconnect Switch |
| **3NP** | Fused Disconnect Switch |
| **3NW1** | Fuse Material to BS and NF Standards [1] |
| **3NW6** | Cylindrical Fuses |
| **3NW8** | Fuse Material to BS and NF Standards |
| **3NX** | Accessories and spare parts for NH-fuses |
| **3NY** | 3NP Accessories |
| **3TK** | Specialty Contactor |
| **3UL22** | Summation Current Transformers |
| **3VU2** | Phase Out Announced |
| **3VX** | Circuit Breaker Accessories and Components |
| **3WX** | 3W Accessories |
| **3WY1** | 3WF Accessories |
| **3WY2** | 3WE Accessories |
| **3WY3** | 3WN Accessories |
| **4AC** | Bell transformers, power supply units |
| **4AJ** | Standard Transformers |
| **4AM** | Control Transformer |
| **4AN** | Single-phase transformers YUI 1 (UI) |
| **4AP** | Transformer for rectifier operation |
| **4AT** | Safety Isolation Transformer, 1 phase |
| **4AU** | Safety Isolation Transformer, 3 phase |
| **4AV** | Special Transformers and DC power supplies |
| **4AW** | Ring core transformers |
| **4AX** | Non-Siemens transformers |
| **4AY** | Transformer housings, accessories and spare parts |
| **4BT** | Transformer > 16 kVA, 1 Phase |
| **4BU** | Transformer > 16 kVA, 3 Phase |
| **4BV** | Special Transformers |
| **4BX** | Transformer, 3-phase |
| **4CH** | Variac 1 Phase |
| **4CJ** | Variac 3 Phase |
| **4CP** | Pillar-type, Variac, 1ph |
| **4CQ** | Pillar-type, Variac, 3ph |
| **4EA** | Reactance Coils with Iron-Core Reactors |
| **4EF** | Reactance Coils with Iron-Core Reactors |
| **4EJ** | Reactance Coils with Iron-Core Reactors |
| **4EM** | Single-phase reactance coils YEI 1 (EI) |
| **4EN9** | Choke |
| **4EP** | Line Reactor |
| **4ET** | Single-phase reactance coils YUI 1 (UI) |
| **4EU** | Three-phase reactance coils YUI 2 (3UI) |
| **4EV** | RFI Suppression Choke |
| **4FB** | Power supplies |
| **4FK** | Magnetic Voltage Regulator 1 phase |
| **4FL** | Transformer Voltage Regulator |
| **4NC** | Window-type Current Transformer |
| **4PK** | Reactance coils with layer winding of copper flat wire |
| **5SA** | DIAZED Fuse Links (E16) Miniature Fuses [1] |
| **5SB** | DIAZED Fuse Links, Size II and III [1] |
| **5SC** | DIAZED Fuse Links, Size IV and V [1] |
| **5SD** | DIAZED Fuses |
| **5SE** | Fuses [1] |
| **5SF** | DIAZED Fuse Base |
| **5SG** | NEOZED & MINIZED Fuse Disconnectors |
| **5SH** | DIAZED Fuse Accessories |
| **5SM** | Residual Current Protective Devices [1] |
| **5SQ** | Miniature Circuit Breaker |
| **5SU** | Ground Fault and Line-Prot. Circuit Breaker |
| **5SV8** | SFJ Fault and Line-Prot. Circuit Breaker |
| **5SW** | Wall Enclosure |
| **5SZ** | Ground Fault Circuit Breakers |
| **5TE** | Toggle Switch |
| **5TG** | Signal Light |
| **5TT** | Switch Relay |
| **7KM** | Meters |
| **7KT** | Time meters, impulsing meters and accessories |
| **7LF** | Digital time switches and accessories |
| **7LQ** | Quarz-controlled time switches |
| **7PV** | Timers |
| **7ZX** | Instruction Manual [1] |
| **8JH** | Distribution Enclosure Accessories |
| **8UB** | Handle Accessories |
| **8WC** | Distribution System Accessories |
| **8ZX** | Instruction Sheets [1] |
| **LZX** | Plug-in Relays [1] |

1) Standard Control Product - Not Considered ICE Product.

## Spring Loaded Terminals

As an alternative to screw-type terminals, many products may be supplied with spring loaded terminals. With this screwless connection technique, the wires are clamped securely against shock and vibration by a spring clamp. Solid, stranded and finely-stranded wires can be connected with or without end sleeves.

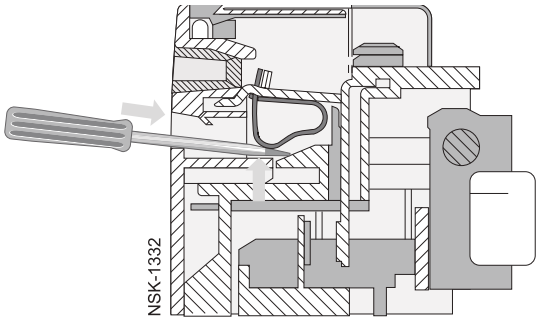
Each terminal connection is equipped with two independently operated spring clamps. Each spring can accept one wire. The clamping force of the spring automatically adjusts to the size of the wire and compensates for any deformation of the wire, such as settling of the strands. The flat clamping face of the spring presses the wire against the current bar without damaging the wire. To prevent stranded or finely-stranded wire from being divided, the end can be tinned or amalgamated using ultrasound.

The terminal is opened by inserting the screwdriver. The wire is then inserted and will remain clamped after the screwdriver is removed (see below). The chromium-nickel steel of the spring clamp provides corrosion-resistant contact of the wire-end in the clamp.

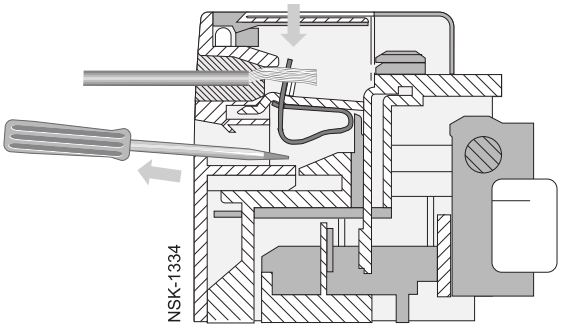
Advantages:

- Quick: The connection is made easily without the need to add on wire end sleeves or torque down terminal screws—reducing wiring time
- Reliable: The terminal is gas-tight and resistant to shock and vibration—for maximum contact reliability
- Maintenance-free: With the spring loaded terminals, there is no need to inspect the connections following transport—eliminating time-consuming and costly inspection

Step 1:
Insert screwdriver;
spring opens.



Step 2:
The screwdriver holds the spring open;
insert the wire.



Step 3:
Remove the screwdriver; the spring
closes and the wire is securely clamped.

## Standard terms and conditions of sale

**1. APPLICABLE TERMS.** These terms govern the sale of Products by Siemens. Whether these terms are included in an offer or an acceptance by Siemens, such offer or acceptance is conditioned on Buyer's assent to these terms. Any additional, different or conflicting terms contained in Buyer's request for proposal, specifications, purchase order or any other written or oral communication from Buyer shall not be binding in any way on Siemens. Siemens failure to object to any such additional, different or conflicting terms shall not operate as a waiver of these terms.

**2. PRICING & PAYMENT.** The prices shall be: (a.) as stated in Siemens' proposal, or if none are stated, (b.) Siemens' standard prices in effect at the time of release for shipment. In the event of a price increase or decrease, the price of Products on order shall be adjusted to reflect such increase or decrease. This does not apply to a shipment held by request of Buyer. Products already shipped are not subject to price increase or decrease.

Discounts, if any, are as specified on the latest discount sheets issued from time to time. Cash discounts are not applicable to notes or trade acceptances, to prepaid transportation charges when added to Siemens' invoices or to discountable items if there are undisputed past due items on the account. Cash discounts shall only be allowed on that portion of the invoice paid within the normal discount period.

(a) Payment - Unless otherwise stated, all payments shall be net 30 days from invoice date payable in United States Dollars.

(b) Credit Approval - All orders are subject to credit approval by Siemens. The amount of credit or terms of payment may be changed or credit withdrawn by Siemens at any time for any reason without advance notice. Siemens may, in its discretion, withhold further manufacture or shipment; require immediate cash payments for past and future shipments; or require other security satisfactory to Siemens before further manufacture or shipment is made; and may, if shipment has been made, recover the Products from the carrier, pending receipt of such assurances.

(c) Installment Shipment - If these terms require or authorize delivery of Products in separate shipments to be separately accepted by Buyer, Buyer may only refuse such portion of such shipment that fails to comply with the requirements of these terms. Buyer may not refuse to receive any lot or portion of hereunder for failure of any other lot or portion of a lot to be delivered or to comply with these terms, unless such right of refusal is expressly provided for on the face hereof. Buyer shall pay for each lot in accordance with the terms hereof. Payment shall be made for the Products without regard to whether Buyer has made or may make any inspection of the Products. Products held for Buyer are at Buyer's sole risk and expense.

(d) Taxes, Shipping, Packing, Handling - Except to the extent expressly stated in these terms, Siemens' prices do not include any freight, storage, insurance, taxes, excises, fees, duties or other government charges related to the Product, and Buyer shall pay such amounts or reimburse Siemens for any amounts Siemens pays. If Buyer claims a tax or other exemption or direct payment permit, it shall provide Siemens with a valid exemption certificate or permit and indemnify, defend and hold Siemens harmless from any taxes, costs and penalties arising out of same. Siemens' prices include the costs of its standard domestic packing only. Any deviation from this standard packing (domestic or export), including U.S. Government sealed packing, shall result in extra charges. To determine such extra charges, consult Siemens' sales offices. Any and all increases, changes, adjustments or surcharges (including, without limitation, fuel surcharges) which may be in connection with the freight charges, rates or classification included as part of these terms, shall be for the Buyer's account. Orders of less than $400 are subject to a $25 handling fee.

(e) Finance Charge - Buyer agrees to pay FINANCE CHARGES on the unpaid balance of all overdue invoices, less any applicable payments and credits, from the date each invoice is due and payable at an ANNUAL PERCENTAGE RATE of EIGHTEEN PERCENT (18%), or the highest applicable and lawful rate on such unpaid balance, whichever is lower.

(f) Disputed Invoice - In the event Buyer disputes any portion or all of an invoice, it shall notify Siemens in writing of the amount in dispute and the reason for its disagreement within 21 days of receipt of the invoice. The undisputed portion shall be paid when due, and FINANCE CHARGE on any unpaid portion shall accrue, from the date due until the date of payment, to the extent that such amounts are finally determined to be payable to Siemens.

(g) Collection – Upon Buyer's default of these terms, Siemens may, in addition to any other rights or remedies at contract or law, subject to any cure right of Buyer, declare the entire balance of Buyer's account immediately due and payable or foreclose any security interest in Products delivered. If any unpaid balance is referred for collection, Buyer agrees to pay Siemens, to the extent permitted by law, reasonable attorney fees in addition to all damages otherwise available, whether or not litigation is commenced or prosecuted to final judgment, plus any court costs or expenses incurred by Siemens, and any FINANCE CHARGES accrued on any unpaid balance owed by Buyer.

**3. DELIVERY; TITLE; RISK OF LOSS.** Product shall be delivered F.O.B. Siemens point of shipment with title to the Product and risk of loss or damage for the Product passing to Buyer at that point. Buyer shall be responsible for all transportation, insurance and related expenses including any associated taxes, duties or documentation. Siemens may make partial shipments. Shipping dates are approximate only and Siemens shall not be liable for any loss or expense (consequential or otherwise) incurred by Buyer or Buyer's customers if Siemens fails to meet the specified delivery schedule. A 5% handling charge will be added to the price for all Product furnished from a local branch.

**4. DEFERMENT AND CANCELLATION.** Buyer shall have no deferment rights and Buyer shall be liable for cancellation charges, which shall include without limitation a) payment of the full product price for any finished Product or works in progress; b) payment for raw materials ordered pursuant to a firm purchase order; and c) such other direct costs incurred by Siemens as a result of such cancellation.

**5. FORCE MAJEURE / DELAYS.** If Siemens suffers delay in performance due to any cause beyond its reasonable control, including without limitation acts of God, strikes, labor shortage or disturbance, fire, accident, war or civil disturbance, delays of carriers, failure of normal sources of supply, or acts of government, the time of performance shall be extended a period of time equal to the period of the delay and its consequences. Siemens will give to Buyer notice within a reasonable time after Siemens becomes aware of any such delay

**6. BUYER'S REQUIREMENTS.** Timely performance by Siemens is contingent upon Buyer's supplying to Siemens all required technical information and data, including drawing approvals, and all required commercial documentation.

**7. LIMITED WARRANTY.** (a.) Limited Product Warranty Statements. For each Product purchased from Siemens or an authorized reseller, Siemens makes the following limited warranties: (i) the Product is free from defects in material and workmanship, (ii) the Product materially conforms to Siemens' specifications that are attached to, or expressly incorporated by reference into, these terms, and (iii) at the time of delivery, Siemens has title to the Product free and clear of liens and encumbrances (collectively, the "Limited Warranties"). Warranties with respect to software which may be furnished by Seller as part of the Product, if any, are expressly set forth elsewhere in these terms. The Limited Warranties set forth herein do not apply to any software furnished by Siemens. If software is furnished by Siemens, then the attached Software License/Warranty Addendum shall apply.

(b.) Conditions to the Limited Warranties. The Limited Warranties are conditioned on (i) Buyer storing, installing, operating and maintaining the Product in accordance with Siemens' instructions, (ii) no repairs, modifications or alterations being made to the Product other than by Siemens or its authorized representatives, (iii) using the Product within any conditions or in compliance with any parameters set forth in specifications that are attached to, or expressly incorporated by reference into, these terms, (iv) Buyer discontinuing use of the Product after it has, or should have had, knowledge of any defect in the Product, (v) Buyer providing prompt written notice of any warranty claims within the warranty period described below, (vi) at Siemens' discretion, Buyer either removing and shipping the Product or non-conforming part thereof to Siemens, at Buyer's expense, or Buyer granting Siemens access to the Products at all reasonable times and locations to assess the warranty claims, and (vii) Buyer not being in default of any payment obligation to Siemens under these terms.

(c.) Exclusions from Limited Warranty Coverage. The Limited Warranties specifically exclude any equipment comprising part of the Product that is not manufactured by Siemens or not bearing its nameplate. To the extent permitted, Siemens herby assigns any warranties made to Siemens for such equipment. Siemens shall have no liability to Buyer under any legal theory for such equipment or any related assignment of warranties. Additionally, any Product that is described as being experimental, developmental, prototype, or pilot is specifically excluded from the Limited Warranties and is provided to Buyer "as is" with no warranties of any kind. Also excluded from the Limited Warranties are normal wear and tear items including any expendable items that comprise part of the Product, such as fuses and light bulbs and lamps.

# Siemens Industry, Inc. (Seller)

## Standard terms and conditions of sale

(d.) Limited Warranty Period. Buyer shall have 12 months from initial operation of the Product or 18 months from shipment, whichever occurs first, to provide Siemens with prompt, written notice of any claims of breach of the Limited Warranties. Continued use or possession of the Product after expiration of the warranty period shall be conclusive evidence that the Limited Warranties have been fulfilled to the full satisfaction of Buyer, unless Buyer has previously provided Siemens with notice of a breach of the Limited Warranties.

(e.) Remedies for Breach of Limited Warranty. Buyer's sole and exclusive remedies for any breach of the Limited Warranties are limited to Siemens' choice of repair or replacement of the Product, or non-conforming parts thereof, or refund of all or part of the purchase price. The warranty on repaired or replaced parts of the Product shall be limited to the remainder of the original warranty period. Unless otherwise agreed to in writing by Siemens, (i) Buyer shall be responsible for any labor required to gain access to the Product so that Siemens can assess the available remedies and (ii) Buyer shall be responsible for all costs of installation of repaired or replaced Products. All exchanged Products replaced under this Limited Warranty will become the property of Siemens.

(f.) Transferability. The Limited Warranties shall be transferable during the warranty period to the initial end-user of the Product.

THE LIMITED WARRANTIES SET FORTH IN THIS SECTION ARE SIEMENS' SOLE AND EXCLUSIVE WARRANTIES AND ARE SUBJECT TO THE LIMITS OF LIABILITY SET FORTH IN SECTION 8 BELOW. SIEMENS MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, COURSE OF DEALING AND USAGE OF TRADE.

**8. LIMITATION OF LIABILITY.** NEITHER SIEMENS, NOR ITS SUPPLIERS, SHALL BE LIABLE, WHETHER IN CONTRACT, WARRANTY, FAILURE OF A REMEDY TO ACHIEVE ITS INTENDED OR ESSENTIAL PURPOSES, TORT (INCLUDING NEGLIGENCE), STRICT LIABILITY, INDEMNITY OR ANY OTHER LEGAL THEORY, FOR LOSS OF USE, REVENUE, SAVINGS OR PROFIT, OR FOR COSTS OF CAPITAL OR OF SUBSTITUTE USE OR PERFORMANCE, OR FOR INDIRECT, SPECIAL, LIQUIDATED, PUNITIVE, EXEMPLARY, COLLATERAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, OR FOR ANY OTHER LOSS OR COST OF A SIMILAR TYPE, OR FOR CLAIMS BY BUYER FOR DAMAGES OF BUYER'S CUSTOMERS. SIEMENS' MAXIMUM LIABILITY UNDER THIS CONTRACT SHALL BE THE ACTUAL PURCHASE PRICE RECEIVED BY SIEMENS FOR THE PRODUCT AT ISSUE OR ONE MILLION DOLLARS, WHICHEVER IS LESS. BUYER AGREES THAT THE EXCLUSIONS AND LIMITATIONS SET FORTH IN THIS ARTICLE ARE SEPARATE AND INDEPENDENT FROM ANY REMEDIES WHICH BUYER MAY HAVE HEREUNDER AND SHALL BE GIVEN FULL FORCE AND EFFECT WHETHER OR NOT ANY OR ALL SUCH REMEDIES SHALL BE DEEMED TO HAVE FAILED OF THEIR ESSENTIAL PURPOSE. THESE LIMITATIONS OF LIABILITY ARE EFFECTIVE EVEN IF SIEMENS HAS BEEN ADVISED BY THE BUYER OF THE POSSIBILITY OF SUCH DAMAGES.

**9. PATENT AND COPYRIGHT INFRINGEMENT.** Siemens will, at its own expense, defend or at its option settle any suit or proceeding brought against Buyer in so far as it is based on an allegation that any Product (including parts thereof), or use thereof for its intended purpose, constitutes an infringement of any United States patent or copyright, if Siemens is promptly provided notice and given authority, information, and assistance in a timely manner for the defense of said suit or proceeding. Siemens will pay the damages and costs awarded in any suit or proceeding so defended. Siemens will not be responsible for any settlement of such suit or proceeding made without its prior written consent. In case the Product, or any part thereof, as a result of any suit or proceeding so defended is held to constitute infringement or its use by Buyer is enjoined, Siemens will, at its option and its own expense, either: (a) procure for Buyer the right to continue using said Product; (b) replace it with substantially equivalent non-infringing Product; or (c) modify the Product so it becomes non-infringing.

Siemens will have no duty or obligation to Buyer under this Article to the extent that the Product is (a) supplied according to Buyer's design or instructions wherein compliance therewith has caused Siemens to deviate from its normal course of performance, (b) modified by Buyer or its contractors after delivery, (c) combined by Buyer or its contractors with devices, methods, systems or processes not furnished hereunder and by reason of said design, instruction, modification, or combination a suit is brought against Buyer. In addition, if by reason of such design, instruction, modification or combination, a suit or proceeding is brought against Siemens, Buyer shall protect Siemens in the same manner and to the same extent that Siemens has agreed to protect Buyer under the provisions of the Section above.

THIS ARTICLE IS AN EXCLUSIVE STATEMENT OF ALL THE DUTIES OF THE PARTIES RELATING TO PATENTS AND COPYRIGHTS, AND DIRECT OR CONTRIBUTORY PATENT OR COPYRIGHT AND OF ALL THE REMEDIES OF BUYER RELATING TO ANY CLAIMS, SUITS, OR PROCEEDINGS INVOLVING PATENTS AND COPYRIGHTS.

**10. COMPLIANCE WITH LAWS.** Buyer agrees to comply with all applicable laws and regulations relating to the purchase, resale, exportation, transfer, assignment, disposal or use of the goods.

**11. CHANGES IN WORK.** Siemens shall not implement any changes in the scope of work unless Buyer and Siemens agree in writing to the details of the change and any resulting price, schedule or other contractual modifications. Any change to any law, rule, regulation, order, code, standard or requirement which requires any change hereunder shall entitle Siemens to an equitable adjustment in the prices and any time of performance.

**12. NON-WAIVER OF DEFAULT.** Each shipment made hereunder shall be considered a separate transaction. In the event of any default by Buyer, Siemens may decline to make further shipments. If Siemens elects to continue to make shipments, Siemens' actions shall not constitute a waiver of any default by Buyer or in any way affect Siemens' legal remedies for any such default. Any waiver of Siemens to require strict compliance with the provisions of this contract shall be in writing and any failure of Siemens to require such strict compliance shall not be deemed a waiver of Siemens' right to insist upon strict compliance thereafter.

**13. FINAL WRITTEN AGREEMENT; MODIFICATION OF TERMS.** These terms, together with any quotation, purchase order or acknowledgement issued or signed by Siemens, comprise the complete and exclusive agreement between the parties (the "Agreement") and supersede any terms contained in Buyer's documents, unless separately signed by Siemens. These terms may only be modified by a written instrument signed by authorized representatives of both parties.

**14. ASSIGNMENT.** Neither party may assign the Agreement, in whole or in part, nor any rights or obligations hereunder without the prior written consent of the other; provided however that Siemens may assign its rights and obligations under these terms to its affiliates and Siemens may grant a security interest in the Agreement and/or assign proceeds of the Agreement without Buyer's consent.

**15. APPLICABLE LAW AND JURISDICTION.** These terms are governed and construed in accordance with the laws of the State of Delaware, without regard to its conflict of laws principles. The application of the United Nations Convention on Contracts for the International Sale of Goods is excluded. BUYER WAIVES ALL RIGHTS TO A JURY TRIAL IN ANY ACTION OR PROCEEDING RELATED IN ANY WAY TO THESE TERMS.

**16. SEVERABILITY.** If any provision of these terms is held to be invalid, illegal or unenforceable, the validity, legality and enforceability of the remaining provisions will not in any way be affected or impaired, and such provision will be deemed to be restated to reflect the original intentions of the parties as nearly as possible in accordance with applicable law.

**17. EXPORT COMPLIANCE.** Buyer acknowledges that Siemens is required to comply with applicable export laws and regulations relating to the sale, exportation, transfer, assignment, disposal, and usage of the Products provided under the Contract, including any export license requirements. Buyer agrees that such Products shall not at any time directly or indirectly be used, exported, sold, transferred, assigned or otherwise disposed of in a manner which will result in non-compliance with such applicable export laws and regulations. It shall be a condition of the continuing performance by Siemens of its obligations hereunder that compliance with such export laws and regulations be maintained at all times. BUYER AGREES TO INDEMNIFY AND HOLD SIEMENS HARMLESS FROM ANY AND ALL COSTS, LIABILITIES, PENALTIES, SANCTIONS AND FINES RELATED TO NON-COMPLIANCE WITH APPLICABLE EXPORT LAWS AND REGULATIONS.
